Esthetic Experiments Marek Wojtaszek, 2014-08-26 Contemporary American landscape is wrought with ongoing processes and phenomena of technicization observable at the intersections of multiple layers of society This book brings to attention their cultural and political aspects emphasizing timeliness and necessity of academic intervention into and evaluation of their specificity and ramifications Presenting critical and analytical account of cultural narratives which define speak of and use diverse technologies of writing sound media representations surveillance war the texts compiled in this volume investigate the coalescence between technological production on the one hand and the textual on the other The idea of the book responds to the current academic appeal inspired by postmodern questioning of the foundations and realized most importantly by deconstruction to dismantle one of the constitutive pillars of Western civilization namely between techne and episteme In their interpretative mode the texts proceed largely experimentally bridging the gap between techne and episteme In doing so they endeavor to reformulate and complexify an experience of American culture The book aims to clarify and exemplify that the junction of text and technology implies that meanings are embedded in a material Consequently the publication introduces and popularizes the assumption that American cultural experience emerges as a genuine experiment of an esthetic nature

Cyberculture, Cyborgs and Science Fiction William S. Haney, 2006 Addressing a key issue related to human nature this book argues that the first person experience of pure consciousness may soon be under threat from posthuman biotechnology In exploiting the mind's capacity for instrumental behavior posthumanists seek to extend human experience by physically projecting the mind outward through the continuity of thought and the material world as through telepresence and other forms of prosthetic enhancements Posthumanism envisions a biology machine symbiosis that will promote this extension arguably at the expense of the natural tendency of the mind to move toward pure consciousness As each chapter of this book contends by forcibly overextending and thus jeopardizing the neurophysiology of consciousness the posthuman condition could in the long term undermine human nature defined as the effortless capacity for transcending the mind's conceptual content Presented here for the first time the essential argument of this book is more than a warning it gives a direction far better to practice patience and develop pure consciousness and evolve into a higher human being than to fall prey to the Faustian temptations of biotechnological power As argued throughout the book each person must choose for him or herself between the technological extension of physical experience through mind body and world on the one hand and the natural powers of human consciousness on the other as a means to realize their ultimate vision
