Sound, Music and the Moving-Thinking Body Osvaldo Glieca, Marilyn Wyers, 2014-07-08 It has long been known that practicing musicians and dancers draw upon interdisciplinary relationships between sound and movement to inform their work and that many performance arts educators apply these relationships in working with aspiring composers choreographers and performers However most material on the subject has been to this point relegated to single chapters in books and journal articles Now Sound Music and the Moving Thinking Body brings together the diverse topics researchers and practitioners across the sector are exploring and raises issues concerning the collaborative aspects of creating and performing new work Sound Music and the Moving Thinking Body is a result of the Composer Choreographer and Performer Collaboration Conference of Contemporary Music and Dance Movement 2012 hosted by the Institute of Musical Research Senate House University of London and the Department of Music at Goldsmiths University of London

The Sound of Architecture Angeliki Sioli, Elisavet Kiourtsoglou, 2022-05-18 How sound and its atmospheres transform architecture Acoustic atmospheres can be fleeting elusive or short lived Sometimes they are constant but more often they change from one moment to the next forming distinct impressions each time we visit certain places Stable or dynamic acoustic atmospheres have a powerful effect on our spatial experience sometimes even more so than architecture itself This book explores the acoustic atmospheres of diverse architectural environments in terms of scale program location or historic period providing an overview of how acoustic atmospheres are created perceived experienced and visualized The contributors explore how sound and its atmospheres transform architecture and space Their essays demonstrate that sound is a tangible element in the design and staging of atmospheres and that it should become a central part of the spatial explorations of architects designers and urban planners The Sound of Architecture will be of interest to architectural historians theorists students and practicing architects who will discover how acoustic atmospheres can be created without complex and specialized engineering It will also be of value to scholars working in the field of history of emotions as it offers evocative descriptions of acoustic atmospheres from diverse cultures and time periods
