Linker Strategies in Solid-Phase Organic Synthesis Peter Scott, 2009-10-13 Linker design is an expanding field with an exciting future in state of the art organic synthesis. Ever increasing numbers of ambitious solution phase reactions are being adapted for solid phase organic chemistry and to accommodate them large numbers of sophisticated linker units have been developed and are now routinely employed in solid phase synthesis. *Linker Strategies in Solid Phase Organic Synthesis* guides the reader through the evolution of linker units from their genesis in solid supported peptide chemistry to the cutting edge diversity linker units that are defining a new era of solid phase synthesis. Individual linker classes are covered in easy to follow chapters written by international experts in their respective fields and offer a comprehensive guide to linker technology whilst simultaneously serving as a handbook of synthetic transformations now possible on solid supports. Topics include the principles of solid phase organic synthesis, electrophile and nucleophile cleavable linker units, cyclative cleavage as a solid phase strategy, photocleavable linker units, safety catch linker units, enzyme cleavable linker units, T1 and T2 versatile triazene linker groups, hydrazone linker units, benzotriazole linker units, phosphorus linker units, sulfur linker units, selenium and tellurium linker units, sulfur oxygen and selenium linker units cleaved by radical processes, silicon and germanium linker units, boron and stannane linker units, bismuth linker units, transition metal carbonyl linker units, linkers releasing olefins or cycloolefins by ring closing metathesis, fluorous linker units, solid phase radiochemistry. The book concludes with extensive linker selection tables cataloguing the linker units described in this book according to the substrate liberated upon cleavage and conditions used to achieve such cleavage, enabling readers to choose the right linker unit for their synthesis. *Linker Strategies in Solid Phase Organic Synthesis* is an essential guide to the diversity of linker units for organic chemists in academia and industry working in the broad areas of solid phase organic synthesis and diversity oriented synthesis, medicinal chemists in the pharmaceutical industry who routinely employ solid phase chemistry in the drug discovery business, and advanced undergraduates, postgraduates and organic chemists with an interest in leading edge developments in their field.
