Mahendra Dev, 2008 Lectures delivered during 2005-06 at Hyderabad by eminent scholars some were revised. **New Perspectives on Irish English** Bettina Migge, Máire Ní Chiosáin, 2012 This volume brings together current research by international scholars on the varieties of English spoken in Ireland. The papers apply contemporary theoretical and methodological approaches and frameworks to a range of topics. A number of papers explore the distribution of linguistic features in Irish English including the evolution of linguistic structures in Irish English and linguistic change in progress employing broadly quantitative sociolinguistic approaches. Pragmatic features of Irish English are explored through corpus linguistics based analysis. The construction of linguistic corpora using written and recorded material form the focus of other papers extending and analyzing the growing range of corpus material available to researchers of varieties of English including diaspora varieties. Issues of language and identity in contemporary Ireland are explored in several contributions using both qualitative and quantitative methods. The volume will be of interest to linguists generally and to scholars with an interest in varieties of English. **India Social Development Report 2023** Indira Hirway, 2024-01-20 This report highlights that gender inequalities and women's subordination in India are caused by two formidable macro structures: patriarchy and the exclusion of unpaid work from the macro economy. Both these structures reinforce each other and negatively impact women's empowerment. Patriarchy imposes subordination on women and forces a disproportionately higher share of unpaid domestic services and unpaid care onto them. This is unfair and unjust, a violation of basic human rights. Other structures like race, religion, and caste cut across these main structures. The selected papers in this report show how patriarchy causes gender inequalities in all critical dimensions of women's life on the one hand and how unpaid domestic services and unpaid care sustain the macro economy and its growth on the other. The contributors discuss pathways to integrate unpaid work with the macro economy such that the strength of patriarchy declines and at the same time gender equality is promoted. To put it differently, unless the structures are addressed by integrating unpaid work, inequalities cannot be addressed effectively. The report emphasizes that this is the only way to move to real macroeconomics. The papers have explored pathways to break these structures gradually to achieve gender equality and empower women. Though the path is challenging, it is feasible to reach the goal of pervasive gender equality. **Economics of sequestering Carbon in the Agricultural Sector**, **The Social Dog** Julianne Kaminski, Sarah Marshall-Pescini, 2014-05-20 Dogs have become the subject

of increasing scientific study over the past two decades chiefly due to their development of specialized social skills seemingly a result of selection pressures during domestication to help them adapt to the human environment The Social Dog Behaviour and Cognition includes chapters from leading researchers in the fields of social cognition and behavior vocalization evolution and more focusing on topics including dog dog and dog human interaction bonding with humans social behavior and learning and more Dogs are being studied in comparative cognitive sciences as well as genetics ethology and many more areas As the number of published studies increases this book aims to give the reader an overview of the state of the art on dog research with an emphasis on social behavior and socio cognitive skills It represents a valuable resource for students veterinarians dog specialists or anyone who wants deeper knowledge of his or her canine companion Reviews the state of the art of research on dog social interactions and cognition Includes topics on dog dog as well as dog human interactions Features contributions from leading experts in the field which examine current studies while highlighting the potential for future research

Algorithmic aspects of resource allocation and multiwinner voting: theory and experiments Kaczmarczyk, Andrzej, 2021-12-10 This thesis is concerned with investigating elements of computational social choice in the light of real world applications We contribute to a better understanding of the areas of fair allocation and multiwinner voting For both areas inspired by real world scenarios we propose several new notions and extensions of existing models Then we analyze the complexity of answering the computational questions raised by the introduced concepts To this end we look through the lens of parameterized complexity We identify different parameters which describe natural features specific to the computational problems we investigate Exploiting the parameters we successfully develop efficient algorithms for specific cases of the studied problems We complement our analysis by showing which parameters presumably cannot be utilized for seeking efficient algorithms Thereby we provide comprehensive pictures of the computational complexity of the studied problems Specifically we concentrate on four topics that we present below grouped by our two areas of interest For all but one topic we present experimental studies based on implementations of newly developed algorithms We first focus on fair allocation of indivisible resources In this setting we consider a collection of indivisible resources and a group of agents Each agent reports its utility evaluation of every resource and the task is to fairly allocate the resources such that each resource is allocated to at most one agent We concentrate on the two following issues regarding this scenario The social context in fair allocation of indivisible resources In many fair allocation settings it is unlikely that every agent knows all other agents For example consider a scenario where the agents represent employees of a large corporation It is highly unlikely that every employee knows every other employee Motivated by such settings we come up with a new model of graph envy freeness by adapting the classical envy freeness notion to account for social relations of agents modeled as social networks We show that if the given social network of agents is simple for example if it is a directed acyclic graph then indeed we can sometimes find fair allocations efficiently However we contrast tractability results with showing NP hardness for several cases including

those in which the given social network has a constant degree Fair allocations among few agents with bounded rationality Bounded rationality is the idea that humans due to cognitive limitations tend to simplify problems that they face One of its emanations is that human agents usually tend to report simple utilities over the resources that they want to allocate for example agents may categorize the available resources only into two groups of desirable and undesirable ones Applying techniques for solving integer linear programs we show that exploiting bounded rationality leads to efficient algorithms for finding envy free and Pareto efficient allocations assuming a small number of agents Further we demonstrate that our result actually forms a framework that can be applied to a number of different fairness concepts like envy freeness up to one good or envy freeness up to any good This way we obtain efficient algorithms for a number of fair allocation problems assuming few agents with bounded rationality We also empirically show that our technique is applicable in practice Further we study multiwinner voting where we are given a collection of voters and their preferences over a set of candidates The outcome of a multiwinner voting rule is a group or a set of groups in case of ties of candidates that reflect the voters preferences best according to some objective In this context we investigate the following themes The robustness of election outcomes We study how robust outcomes of multiwinner elections are against possible mistakes made by voters Assuming that each voter casts a ballot in a form of a ranking of candidates we represent a mistake by a swap of adjacent candidates in a ballot We find that for rules such as SNTV k Approval and k Borda it is computationally easy to find the minimum number of swaps resulting in a change of an outcome This task is however NP hard for STV and the Chamberlin Courant rule We conclude our study of robustness with experimentally studying the average number of random swaps leading to a change of an outcome for several rules Strategic voting in multiwinner elections We ask whether a given group of cooperating voters can manipulate an election outcome in a favorable way We focus on the k Approval voting rule and we show that the computational complexity of answering the posed question has a rich structure We spot several cases for which our problem is polynomial time solvable However we also identify NP hard cases For several of them we show how to circumvent the hardness by fixed parameter tractability We also present experimental studies indicating that our algorithms are applicable in practice Diese Arbeit befasst sich mit der Untersuchung von Themen des Forschungsgebiets Computational Social Choice im Lichte realer Anwendungen Dabei tr gt sie zu einem besseren Verst ndnis der Bereiche der fairen Zuordnung und der Mehrgewinnerwahlen bei F r beide Konzepte schlagen wir inspiriert von realen Anwendungen verschiedene neue Begriffe und Erweiterungen bestehender Modelle vor Anschlie end analysieren wir die Komplexit t der Beantwortung von Berechnungsfragen die durch die eingef hrten Konzepte aufgeworfen werden Dabei fokussieren wir uns auf die parametrisierte Komplexit t Hierzu identifizieren wir verschiedene Parameter welche nat rliche Merkmale der von uns untersuchten Berechnungsprobleme beschreiben Durch die Nutzung dieser Parameter entwickeln wir erfolgreich effiziente Algorithmen f r Spezialf lle der untersuchten Probleme Wir erg nzen unsere Analyse indem wir zeigen welche Parameter

vermutlich nicht verwendet werden können um effiziente Algorithmen zu finden Dabei zeichnen wir ein umfassendes Bild der Berechnungskomplexität der untersuchten Probleme Insbesondere konzentrieren wir uns auf vier Themen die wir gruppiert nach unseren beiden Schwerpunkten unten vorstellen Für alle Themen bis auf eines präsentieren wir Experimente die auf Implementierungen der von uns neu entwickelten Algorithmen basieren Wir konzentrieren uns zunächst auf die faire Zuordnung unteilbarer Ressourcen Hier betrachten wir eine Menge unteilbarer Ressourcen und eine Gruppe von Agenten Jeder Agent gibt eine Bewertung des Nutzens jeder Ressource ab und die Aufgabe besteht darin eine faire Zuordnung der Ressourcen zu finden wobei jede Ressource höchstens einem Agenten zugeordnet werden kann Innerhalb dieses Bereiches konzentrieren wir uns auf die beiden folgenden Problemstellungen Der soziale Kontext bei der fairen Zuordnung unteilbarer Ressourcen In vielen Szenarien in denen Ressourcen zugeordnet werden sollen ist es unwahrscheinlich dass jeder Agent alle anderen kennt Vorstellbar ist beispielsweise ein Szenario in dem die Agenten Mitarbeiter eines großen Unternehmens repräsentieren Es ist höchst unwahrscheinlich dass jeder Mitarbeiter jeden anderen Mitarbeiter kennt Motiviert durch solche Szenarien entwickeln wir ein neues Modell der graphbasierten Neidfreiheit Wir erweitern den klassischen Neidfreiheitsbegriff um die sozialen Beziehungen von Agenten die durch soziale Netzwerke modelliert werden Einerseits zeigen wir dass wenn das soziale Netzwerk der Agenten einfach ist zum Beispiel wenn es sich um einen gerichteten azyklischen Graph handelt in manchen Fällen faire Zuordnungen effizient gefunden werden können Andererseits stellen wir diesen algorithmisch positiven Ergebnissen mehrere NP-schweren Fällen entgegen Ein Beispiel für einen solchen Fall sind soziale Netzwerke mit einem konstanten Knotengrad Faire Zuteilung an wenige Agenten mit begrenzter Rationalität Begrenzte Rationalität beschreibt die Idee dass Menschen aufgrund kognitiver Grenzen dazu neigen Probleme mit denen sie konfrontiert werden zu vereinfachen Eine mögliche Folge dieser Grenzen ist dass menschliche Agenten in der Regel einfache Bewertungen der gewünschten Ressourcen abgeben beispielsweise können Agenten die verfügbaren Ressourcen nur in zwei Gruppen erwünschte und unerwünschte Ressourcen kategorisieren Durch Anwendung von Techniken zum Lösen von Ganzzahligen Linearen Programmen zeigen wir dass unter der Annahme einer kleinen Anzahl von Agenten die Ausnutzung begrenzter Rationalität dabei hilft effiziente Algorithmen zum Finden neidfreier und Pareto effizienter Zuweisungen zu entwickeln Weiterhin zeigen wir dass unser Ergebnis ein allgemeines Verfahren liefert welches auf eine Reihe verschiedener Fairnesskonzepte angewendet werden kann wie zum Beispiel Neidfreiheit bis auf ein Gut oder Neidfreiheit bis auf irgendein Gut Auf diese Weise gewinnen wir effiziente Algorithmen für eine Reihe fairer Zuordnungsprobleme wenige Agenten mit begrenzter Rationalität vorausgesetzt Darüber hinaus zeigen wir empirisch dass unsere Technik in der Praxis anwendbar ist Weiterhin untersuchen wir Mehrgewinnerwahlen bei denen uns eine Menge von Wählern sowie ihre Präferenzen über eine Reihe von Kandidaten gegeben sind Das Ergebnis eines Mehrgewinnerwahlverfahrens ist eine Gruppe oder eine Menge von Gruppen im Falle eines Unentschiedens von Kandidaten welche die Präferenzen der Wähler am besten einem bestimmten Ziel

folgend widerspiegeln In diesem Kontext untersuchen wir die folgenden Themen Die Robustheit von Wahlergebnissen Wir untersuchen wie robust die Ergebnisse von Mehrgewinnerwahlen gegen ber m gleicher Fehler der W hler sind Unter der Annahme dass jeder W hler eine Stimme in Form einer Rangliste von Kandidaten abgibt modellieren wir einen Fehler als einen Tausch benachbarter Kandidaten in der Rangliste Wir zeigen dass f r Wahlregeln wie SNTV k Approval und k Borda die minimale Anzahl an Vertauschungen welche zu einer Ergebnis nderung f hrt einfach zu berechnen ist F r STV und die Chamberlin Courant Regel ist diese Aufgabe allerdings NP schwer Wir schlie en unsere Untersuchung der Robustheit unterschiedlicher Wahlregeln ab mit einer experimentellen Evaluierung der durchschnittlichen Anzahl zuf lliger Vertauschungen die zu einer nderung des Ergebnisses f hren Strategische Abstimmung bei Wahlen mit mehreren Gewinnern Wir fragen ob eine bestimmte Gruppe von kooperierenden W hlern ein Wahlergebnis zu ihren Gunsten manipulieren kann Dabei konzentrieren wir uns auf die k Approval Wahlregel Wir zeigen dass die Berechnungskomplexit t der besagten Manipulation eine reiche Struktur besitzt Auf der einen Seite identifizieren wir mehrere F lle in denen das Problem in Polynomzeit l sbar ist Auf der anderen Seite identifizieren wir jedoch auch NP schwere F lle F r einige von ihnen zeigen wir wie die Berechnungsschwere durch parametrisierte Algorithmen umgangen werden kann Wir pr sentieren zudem experimentelle Untersuchungen welche darauf hindeuten dass unsere Algorithmen in der Praxis anwendbar sind
