Social Measurement and Social Indicators Michael Carley, 2025-06-30 For the early pioneers of the social indicator movement the possibilities of doing social good by developing the tools of social measurement seemed endless However in the early 1980s these high and perhaps naive hopes remained unfulfilled especially for the data needs of the policy maker If not pessimistic administrators and public policy makers were at least guarded about the usefulness of social indicators as an aid to increasingly complex decision making These difficulties reflected both policy related and methodological issues Originally published in 1981 *Social Measurement and Social Indicators* is not a how to guide on the construction of social indicators but rather a critical and optimistic view of these central issues as embodied in the literature and in practice at the time Michael Carley contrasts some of the basic problems of social measurement with government's needs for reliable information organised by their policy usefulness and statistical sophistication The book then discusses the critical relationship between social indicators and social theories and models as well as the role of social information in the policy process Later chapters look at the audience the problems and the prospects for national social reports and explore in detail three different applications of social indicators to urban analysis Throughout the book helpful examples are drawn from North American UK and European experience *Social Measurement and Social Indicators* is aimed at a cross disciplinary audience in government and the universities For students it will serve as a compact introduction to the broad field of social indicators for administrators it explores philosophical and measurement problems and suggests criteria for interpretation for researchers it places social indicator efforts into a wider policy analysis perspective with its inescapable political value judgemental and bureaucratic aspects

Social Indicator Models Kenneth C. Land,Seymour Spilerman,1975-02-14 Deals in comprehensive fashion with a diverse array of objective and subjective social indicators and shows how these indicators can be used potentially to inform and perhaps guide social policy Written with clarity and authority it will be of paramount interest to those concerned with the interpretation and analysis of social indicators and to those interested in their use For the former it serves as an illuminating introduction to some of the analytical tasks that lie ahead in the study of social indicators For the latter it provides a solid foundation upon which future policy analysis may be based

Who Really Rules? G. William Domhoff,1978 Robert A Dahl s Who Governs is a classic pluralist study which has had an important influence on American social science since the early sixties Who Really Rules provides a categorical challenge empirical methodological and theoretical to Dahl s work Empirically Domhoff s restudy of New Haven shows through newly discovered documents that Dahl was wrong about the pluralism of New Haven s power structure He also presents the most systematic statement of power structure methodology yet made a statement that contradicts Dahl s methodological claims which have been the prevailing wisdom in American social science for over fifteen years Finally Domhoff outlines the national policy planning network through which the big business ruling class dominates urban government Who Really Rules is unique in that it makes possible for the first time a dialogue between pluralist and ruling class views on the basis of studies of the same city by leading exponents of the rival theoretical positions It is original in that it includes much data not revealed by Dahl It presents the methodology of power structure research in the most comprehensive fashion yet attempted and reveals a ruling class network for urban policy planning that has never before been fully articulated

Andrews, Stephen B. Withey, 2012-12-06 This is a study about perceptions of well being Its purpose is to investigate how these perceptions are organized in the minds of different groups of American adults to find valid and efficient ways of measuring these perceptions to suggest ways these measurement methods could be implemented to yield a series of social indicators and to provide some initial readings on these indicators i.e. some information about the levels of well being perceived by Americans The findings are based on data from more than five thousand Americans and include results from four separate representative samplings of the American population One of the ways our research is unusual is that it includes a major methodological component Typical surveys involve a modest effort at instrument development the application of the instrument to a group of respondents and an analysis of the resulting data that mainly describes the people studied Our work however was implemented in a series of sequential cycles each of which consisted of conceptual development instrument design data collection analysis and interpretation Ideas and findings generated in prior
