Labelling data is one of the most fundamental activities in science and has underpinned practice particularly in medicine for decades as well as research in corpus linguistics since at least the development of the Brown corpus With the shift towards Machine Learning in Artificial Intelligence AI the creation of datasets to be used for training and evaluating AI systems also known in AI as corpora has become a central activity in the field as well Early AI datasets were created on an ad hoc basis to tackle specific problems As larger and more reusable datasets were created requiring greater investment the need for a more systematic approach to dataset creation arose to ensure increased quality A range of statistical methods were adopted often but not exclusively from the medical sciences to ensure that the labels used were not subjective or to choose among different labels provided by the coders A wide variety of such methods is now in regular use This book is meant to provide a survey of the most widely used among these statistical methods supporting annotation practice As far as the authors know this is the first book attempting to cover the two families of methods in wider use The first family of methods is concerned with the development of labelling schemes and in particular ensuring that such schemes are such that sufficient agreement can be observed among the coders The second family includes methods developed to analyze the output of coders once the scheme has been agreed upon particularly although not exclusively to identify the most likely label for an item among those provided

by the coders The focus of this book is primarily on Natural Language Processing the area of AI devoted to the development of models of language interpretation and production but many if not most of the methods discussed here are also applicable to other areas of AI or indeed to other areas of Data Science **Global Civil Society 2007/8** Professor Martin

Lynch, 2022-10-31 Bayesian statistical analyses have become increasingly

common over the last two decades The rapid increase in computing power that facilitated their implementation coincided with major changes in the research interests of and data availability for social scientists Specifically the last two decades have seen an increase in the availability of panel data sets other hierarchically structured data sets including spatially organized data along with interests in life course processes and the influence of context on individual behavior and outcomes The Bayesian approach to statistics is well suited for these types of data and research questions Applied Bayesian Statistics is an introduction to these methods that is geared toward social scientists Author Scott M Lynch makes the material accessible by emphasizing application more than theory explaining the math in a step by step fashion and demonstrating the Bayesian approach in analyses of U S political trends drawing on data from the General Social Survey *Religion, Economy, and*

Cooperation Ilkka Pyysiäinen, 2010-07-30 Why give money to beggars Why make sacrifices to help others The current volume targets such questions with the tools of neoclassical and behavioural economics philosophy and sociology of religion Both religion and economics are analyzed as social institutions that support human intra group cooperation Even if individuals are rational maximizers of personal utility they yet must take into account the reciprocal nature of human relationships It is better to be part of a cooperative group and make some personal sacrifices because in the end everybody benefits from this Sometimes the metaphor of an invisible hand is used to describe the fact that economic exchange seems to follow some rules

that guarantee the best possible result for everyone In religion it is of course the hand of God that guides the world In both cases individuals are in a way playing against a superior being that always seems to win In this volume some of the cognitive mechanisms and cultural selective forces behind this are examined by specialists in different fields of science The first contributions analyze theoretical and methodological issues in later chapters developments in the European history are explored from the perspectives of sociology and economic theory

The SAGE Handbook of Sociology Craig Calhoun, Chris Rojek, Bryan S Turner, 2005-06-18 Sociology has evolved greatly since its inception as an academic discipline It has diverged into numerous strands often flowing in disparate directions so much so that today the notion of canonical sociology has become widely disputed The field of sociology at present approximates to one of multi-paradigmatic complexity in which many approaches to theory must be distinguished and situated In addition the discipline has had to confront new challenges from globalization the shift of interest from production to consumption the rise of new social movements the challenge of bio-engineering the collapse of a presently existing socialist alternative and much else besides The new SAGE Handbook of Sociology aims to address these new developments while at the same time providing an authoritative guide to theory and method the key sub-disciplines and the primary debates of today To undertake this ambitious project three leading figures in the field of sociology were selected as editors to bring together the foremost exponents of the different strands that contribute towards the make-up of modern sociology Drawn from both sides of the Atlantic the contributors have been commissioned to utilise the most up-to-date research available to provide a critical international analysis of their area of expertise The result is this essential resource collection that not just reflects upon the condition of sociology today but also looks to future developments in the discipline The Handbook is invaluable not just all sociologists but to a wide variety of students and researchers across the social sciences Click on Sample Chapters Resources to download the introduction *Social Research Methods* Kristin Kenneavy, Catherine E.
