on carefully recorded speech in a quiet environment and under conditions of undivided attention Building upon the momentum initiated by the Psycholinguistic Approaches to Speech Recognition in Adverse Conditions workshop held in Bristol UK in 2010 the aim of this volume is to promote a multi disciplinary yet unified approach to the perceptual cognitive and neuro physiological mechanisms underpinning the recognition of degraded speech variable speech speech experienced under cognitive load and speech experienced by theoretically relevant populations This collection opens with a review of the literature and a formal classification of adverse conditions The research articles then highlight those adverse conditions with the greatest potential for constraining theory showing that some speech phenomena often believed to be immutable can be affected by noise surface variations or attentional set in ways that will force researchers to rethink their theory This volume is essential for those interested in speech recognition outside laboratory constraints **Their Stars Shone Brightly** Larry O.
