## **Sound Figures:**

Sound Figures Theodor W. Adorno, 1999 Theodor Adorno is one of the 20th century's most influential thinkers in the areas of social theory, philosophy, aesthetics, and music. This volume of essays contains Adorno's thoughts on music and its wider social implications.

**Sound Figures of Modernity** Jost Hermand, Gerhard Richter, 2006-11-01 The rich conceptual and experiential relays between music and philosophy echo what Theodor W. Adorno once called *Klangfiguren* or sound figures resonate with heightened intensity during the period of modernity that extends from early German Idealism to the Critical Theory of the Frankfurt School. This volume traces the political, historical, and philosophical trajectories of a specifically German tradition in which thinkers take recourse to music both as an aesthetic practice and as the object of their speculative work. The contributors examine the texts of such highly influential writers and thinkers as Schelling, Schopenhauer, Nietzsche, Bloch, Mann, Adorno, and Lukács in relation to individual composers including Beethoven, Wagner, Schoenberg, and Eisler. Their explorations of the complexities that arise in conceptualizing music as a mode of representation and philosophy as a mode of aesthetic practice thematize the ways in which the fields of music and philosophy are altered when either attempts to express itself in terms defined by the other.

Contributors: Albrecht Betz, Lydia Goehr, Beatrice Hanssen, Jost Hermand, David Farrell Krell, Ludger Lütkehaus, Margaret Moore, Rebekah Pryor, Par, Gerhard Richter, Hans Rudolf Vaget, Samuel Weber.

*Listening with Two Ears - New Insights and Perspectives in Binaural Research* Huiming Zhang, Yi Zhou, Lina Reiss, 2023-11-27 Hearing is dependent on neural processing of acoustic cues obtained by the left and right ears. Neural signals driven by the two ears are integrated at multiple levels of the central auditory system, which enables animals, including humans, to perform various functions, including localization of a sound source. A natural listening environment typically contains sounds from multiple sources. These sounds can have different spectral and temporal features and occur at either the same or different time. Integration can happen among neural signals elicited by the same or different sounds. The way of integration can greatly affect how individual sounds are sensed and perceived. Functions such as auditory grouping and stream segregation, which are central to establishing coherent auditory images in a complex listening environment, are highly dependent on the way of integration. Binaural hearing is complicated by individual differences and developmental changes in head and pinna shape/size, as binaural cues can be affected by these differences and changes. Furthermore, neural processing of binaural cues can be influenced by hearing impairments and the use of hearing aids and cochlear implants. These factors likely require a listener to optimize the use of binaural cues through learning and to use plastic changes in the nervous system to perform the optimization. Great strides have been made in understanding binaural processing in normal and impaired auditory systems. This Research Topic aims to highlight some of the latest findings in the following areas:

1. Animal behavioral and human psychoacoustical studies of binaural hearing
2. Neural encoding and processing of binaural cues and structural as well as neurophysiological bases of such encoding and processing
3. Contribution of binaural neural

processing to auditory functions such as sound source localization binaural fusion binaural interference spatial release from masking auditory grouping and auditory stream segregation 4 Computational models of binaural processing 5 Learning and plastic changes in binaural processing following hearing loss or alterations of acoustic environment and structural as well as physiological bases of these behavioral changes 6 Clinical aspects of binaural processing including application of processing strategies including research on the benefits of bilateral cochlear implantation and the neural correlates thereof **Sound**

**Writing** Tobias Wilke, 2022-04-21 Considers the avant garde rethinking of poetic language in terms of physical speech production Avant garde writers and artists of the twentieth century radically reconceived poetic language appropriating scientific theories and techniques as they turned their attention to the physical process of spoken language This modernist sound writing focused on the bodily production of speech which it rendered in poetic legible graphic form Modernist sound writing aims to capture the acoustic phenomenon of vocal articulation by graphic means Tobias Wilke considers sound writing from its inception in nineteenth century disciplines like physiology and experimental phonetics following its role in the aesthetic practices of the interwar avant garde and through to its reemergence in the postwar period These projects work with the possibility of crossing over from the audible to the visible from speech to notation from body to trace Employing various techniques and concepts this search for new possibilities played a central role in the transformation of poetry into a site of radical linguistic experimentation Considering the works of writers and artists including Raoul Hausmann Kurt Schwitters Viktor Shklovsky Hugo Ball Charles Olson and Marshall McLuhan Wilke offers a fresh look at the history of the twentieth century avant garde **Literary Structures of Religious Meaning in the Qu'ran** Issa J

Boullata, 2013-09-05 This volume studies how the literary elements in the Qur'an function in conveying its religious message effectively It is divided into three parts Part one includes studies of the whole Qur'an or large segments of it belonging to one historical period of its revelation these studies concentrate on the analysis of its language its style its structural composition its aesthetic characteristics its rhetorical devices its imagery and the impact of these elements and their significance Part two includes studies on individual suras of the Qur'an each of which focuses on the sura's literary elements and how they produce meaning each also explores the structure of this meaning and the coherence of its effect Part three includes studies on Muslim appreciations of the literary aspects of the Qur'an in past generations and shows how modern linguistic semantic semiotic and literary scholarship can add to their contributions **Harmony and Dissent** R. Bruce Elder, 2010-04-22 R

Bruce Elder argues that the authors of many of the manifestoes that announced in such lively ways the appearance of yet another artistic movement shared a common aspiration they proposed to reformulate the visual literary and performing arts so that they might take on attributes of the cinema The cinema Elder argues became in the early decades of the twentieth century a pivotal artistic force around which a remarkable variety and number of aesthetic forms took shape To demonstrate this Elder begins with a wide ranging discussion that opens up some broad topics concerning modernity's cognitive and

perceptual regime with a view to establishing that a crisis within that regime engendered some peculiar and highly questionable epistemological beliefs and enthusiasms Through this discussion Elder advances the startling claim that a crisis of cognition precipitated by modernity engendered by way of response a peculiar sort of pneumatic spiritual epistemology Elder then shows that early ideas of the cinema were strongly influenced by this pneumatic epistemology and uses this conception of the cinema to explain its pivotal role in shaping two key moments in early twentieth century art the quest to bring forth a pure objectless non representational art and Russian Suprematism Constructivism and Productivism

**Sound Works** Holger Schulze, 2019-04-04 What is sound design What is its function in the early 21st century and into the future Sound Works examines these questions in four parts Part 1 Why This Sound presents an overview of the modern history of sound design Part 2 is highly visual and provides a glance onto a sound designer's workbench and the current state of Sonic Labor Part 3 uses cultural analysis to explore our contemporary Living with Sounds The final and fourth part then proposes a series of anthropological and political interpretations of how Sound Works today This book is not a manual on sound design it instead argues for a cultural theory of sound design for sound designers and sound artists for clients who commission a sound design and for researchers in the fields of sound studies design research and cultural studies

*Poetry and the Thought of Song in Nineteenth-Century Britain* Elizabeth K. Helsinger, 2015-09-09 In arguing for the crucial importance of song for poets in the long nineteenth century Elizabeth Helsinger focuses on both the effects of song on lyric forms and the mythopoetics through which poets explored the affinities of poetry with song Looking in particular at individual poets and poems Helsinger puts extensive close readings into productive conversation with nineteenth century German philosophic and British scientific aesthetics While she considers poets long described as musical Alfred Lord Tennyson Gerard Manly Hopkins Emily Bront and Algernon Charles Swinburne Helsinger also examines the more surprising importance of song for those poets who rethought poetry through the medium of visual art Dante Gabriel Rossetti William Morris and Christina Rossetti In imitating song's forms and sound textures through lyric's rhythm rhyme and repetition these poets were pursuing song's thought in a double sense They not only asked readers to think of particular kinds of song as musical sound in social performance ballads national airs political songs plainchant but also invited readers to think like song to listen to the sounds of a poem as it moves minds in a different way from philosophy or science By attending to the formal practices of these poets the music to which the poets were listening and the stories and myths out of which each forged a poetics that aspired to the

condition of music Helsinger suggests new ways to think about the nature and form of the lyric in the nineteenth century

Before Photography Kirsten Belgham, Vance Byrd, John D. Benjamin, 2021-03-08 Recent years have seen a wealth of new scholarship on the history of photography cinema digital media and video games yet less attention has been devoted to earlier forms of visual culture The nineteenth century witnessed a dramatic proliferation of new technologies devices and print processes which provided growing audiences with access to more visual material than ever before This volume brings together the best aspects of interdisciplinary scholarship to enhance our understanding of the production dissemination and consumption of visual media prior to the predominance of photographic reproduction By setting these examples against the backdrop of demographic educational political commercial scientific and industrial shifts in Central Europe these essays reveal the diverse ways that innovation in visual culture affected literature philosophy journalism the history of perception exhibition culture and the representation of nature and human life in both print and material culture in local national transnational and global contexts

**Sonic Flux** Christoph Cox, 2018-10-22 From Edison's invention of the phonograph through contemporary field recording and sound installation artists have become attracted to those domains against which music has always defined itself noise silence and environmental sound Christoph Cox argues that these developments in the sonic arts are not only aesthetically but also philosophically significant revealing sound to be a continuous material flow to which human expressions contribute but which precedes and exceeds those expressions Cox shows how over the course of the twentieth and twenty first centuries philosophers and sonic artists have explored this sonic flux Through the philosophical analysis of works by John Cage Maryanne Amacher Max Neuhaus Christian Marclay and many others Sonic Flux contributes to the development of a materialist metaphysics and poses a challenge to the prevailing positions in cultural theory proposing a realist and materialist aesthetics able to account not only for sonic art but for artistic production in general

**Iconic Investigations** Lars Elleström, Olga Fischer, Christina Ljungberg, 2013 The contributions to Iconic Investigations deal with linguistic or

literary aspects of language While some studies analyze the cognitive structures of language others pay close attention to the sounds of spoken language and the visual characteristics of written language In addition this volume also contains studies of media types such as music and visual images that are integrated into the overall project to deepen the understanding of iconicity the creation of meaning by way of similarity relations Iconicity is a fundamental but relatively unexplored part of signification in language and other media types During the last decades the study of iconicity has emerged as a vital research area with far reaching interdisciplinary scope and the volume should be of interest for students and researchers interested in scholarly fields such as semiotics cognitive linguistics conceptual metaphor studies poetry intermediality and multimodality

Mottram, Christopher R. Clason, 2022-10-15 This collection of essays turns on a shift in Romantic studies from viewing wholeness as an absolute value to critiquing it as a limiting construction Wholeness and its concomitant sense of harmony rather than a natural given is a construct that was assembled and disassembled theorized and criticized by diverse authors and artists in a wide variety of disciplines and socio historical contexts and instrumentalized for diverse purposes The plurality of these constructions that Goethe's *Urpflanze* for example is not synonymous with Friedrich Schlegel's universal progressive poetry is but one manifestation of how assembly strives but fails to be absolute The other of assembly referenced in the title suggests two divergent but inseparable tendencies firstly how a construction can take on the appearance of a natural given and secondly how assemblages of wholeness harbor within themselves their own principle of disarticulation These two tendencies underlie the inexhaustible character of Romantic gatherings As a construction passes itself off as nature the natural fails to account for itself as a whole The scope of this volume encompasses the establishment mapping and interrogation of assembly and its other in German Romanticism through interdisciplinary studies on literature aesthetics philosophy drama music synaesthesia mathematics science and exploration List of contributors Beate Allert Frederick Burwick Alexis B Smith Margaret Strair Christina Weiler Joshua Wilner

**Adaptive Identification of Acoustic Multichannel Systems Using Sparse Representations** Karim Helwani, 2014-07-25 This book treats the topic of extending the adaptive filtering theory in the context of massive multichannel systems by taking into account a priori knowledge of the underlying system or signal The starting point is exploiting the sparseness in acoustic multichannel system in order to solve the non uniqueness problem with an efficient algorithm for adaptive filtering that does not require any modification of the loudspeaker signals The book discusses in detail the derivation of general sparse representations of acoustic MIMO systems in signal or system dependent transform domains Efficient adaptive filtering algorithms in the transform domains are presented and the relation between the signal and the

system based sparse representations is emphasized Furthermore the book presents a novel approach to spatially preprocess the loudspeaker signals in a full duplex communication system The idea of the preprocessing is to prevent the echoes from being captured by the microphone array in order to support the AEC system The preprocessing stage is given as an exemplarily application of a novel unified framework for the synthesis of sound figures Finally a multichannel system for the acoustic echo suppression is presented that can be used as a postprocessing stage for removing residual echoes As first of its kind it extracts the near end signal from the microphone signal with a distortionless constraint and without requiring a double talk detector

**Music and the Making of Modern Science** Peter Pesic, 2022-09-13 A wide ranging exploration of how music has influenced science through the ages from fifteenth century cosmology to twentieth century string theory In the natural science of ancient Greece music formed the meeting place between numbers and perception for the next two millennia Pesic tells us in *Music and the Making of Modern Science* liberal education connected music with arithmetic geometry and astronomy within a fourfold study the quadrivium Peter Pesic argues provocatively that music has had a formative effect on the development of modern science that music has been not just a charming accompaniment to thought but a conceptual force in its own right Pesic explores a series of episodes in which music influenced science moments in which prior developments in music arguably affected subsequent aspects of natural science He describes encounters between harmony and fifteenth century cosmological controversies between musical initiatives and irrational numbers between vibrating bodies and the emergent electromagnetism He offers lively accounts of how Newton applied the musical scale to define the colors in the spectrum how Euler and others applied musical ideas to develop the wave theory of light and how a harmonium prepared Max Planck to find a quantum theory that reengaged the mathematics of vibration Taken together these cases document the peculiar power of music its autonomous force as a stream of experience capable of stimulating insights different from those mediated by the verbal and the visual An innovative e book edition available for iOS devices will allow sound examples to be played by a touch and shows the score in a moving line
