The Construction Industry in the Fourth Industrial Revolution Clinton Aigbavboa, Wellington Thwala, 2019-08-09
This book gathers papers from the 11th Construction Industry Development Board cidb Postgraduate Research Conference held on 28-30 July 2019 in Johannesburg South Africa. The conference provided an essential forum for reviewing and generating knowledge on Construction 4.0 and consequently highlighted processes and practices that allow us to deliver and operate built environment assets more effectively and efficiently by focusing on physical to digital and digital to physical transformation. The event addressed three broad themes: Industrial production, prefabrication, 3D printing and assembly offsite and advanced manufacturing; Cyber physical systems, actuators, sensors, IoT, robots and cobots for repetitive and dangerous tasks; and drones for mapping, progress monitoring, safety and quality inspections, lifting, moving and positioning. Technologies: digital ecosystems, digital platforms, BIM, video and laser scanning, AI and cloud computing, big data and data analytics, reality capture, blockchain, simulation, virtual and augmented reality, data standards and interoperability and vertical and horizontal integration. Given its scope, the book will be of interest to all construction industry and architectural professionals who want to learn about cutting edge technologies applied to construction. **The Selling Revolution**,

Naval Documents of the American Revolution United States. Naval History Division, 1972. In the tradition of the preceding volumes, the first of which was published in 1964, this work synthesizes edited documents including correspondence, ship logs, muster rolls, orders and newspaper accounts that provide a comprehensive understanding of the war at sea in the spring of 1778. The editors organize this wide array of texts chronologically by theater and incorporate French, Italian and Spanish transcriptions with English translations throughout. *The B2B Revolution*, *The Cryptocurrency Revolution* Rhian Lewis, 2020-10-03. The world of cryptocurrencies and blockchains was initially viewed as a niche space of little interest to mainstream business and finance sectors. With major banks now licensed to provide cryptocurrency custody solutions and everyone from Facebook to governments using the underlying technology to create their own digital currencies, this has undoubtedly changed. *The Cryptocurrency Revolution* explains the most important takeaways from the continued growth of digital currencies and blockchain technology and explores the transformative possibilities of borderless payments, decentralized finance (DeFi) and machine-to-machine transactions. Written in jargon-free and accessible language, this book examines the key value proposition of Bitcoin and other cryptocurrencies and how decentralized technologies could enable banks and financial institutions to become more efficient. It looks at the potential impact of company-backed virtual currencies such as Facebook's Libra and how governments and regulators around the world are reacting to these innovations. With discussion of the principles of tokenomics and the difference between public and private blockchains, *The Cryptocurrency Revolution* is the essential guide for those wishing to understand the threats and opportunities of the changing world of payments and finance. **The North-China Herald and Supreme Court &**
