Tertiary Record Of Rodents In North America:

The Tertiary Record of Rodents in North America William W. Korth, 2013-11-21 Nearly half of the known species of mammals alive today more than 1600 are rodents or gnawing mammals Nowak and Paradiso 1983 The diversity of rodents is greater than that of any other order of mammals Thus it is not surprising that the fossil record of this order is extensive and fossil material of rodents from the Tertiary is known from all continents except Antarctica and Australia The purpose of this book is to compile the published knowledge on fossil rodents from North America and present it in a way that is accessible to paleontologists and mammalogists interested in evolutionary studies of rodents The literature on fossil rodents is widely scattered between journals on paleontology and mammalogy and in house publications of museums and universities Currently there is no single source that offers ready access to the literature on a specific family of rodents and its fossil history This work is presented as a reference text that can be useful to specialists in rodents fossil or recent as well as mammalian paleontologists working on whole faunas Because the diversity of rodents in the world is essentially limitless any monograph that included all fossil rodents would similarly be limitless Hence this book is limited to the record of Tertiary rodents of North America The several species of South American caviomorph rodents that invaded North America near the end of the Tertiary are also not included in this text

Late Cretaceous and Cenozoic Mammals of North America

Michael O. Woodburne, 2004-04-21 This book places into modern context the information by which North American mammalian paleontologists recognize divide calibrate and discuss intervals of mammalian evolution known as North American Land Mammal Ages It incorporates new information on the systematic biology of the fossil record and utilizes the many recent advances in geochronologic methods and their results The book describes the increasingly highly resolved stratigraphy into which all available temporally significant data and applications are integrated Extensive temporal coverage includes the Lancian part of the Late Cretaceous and geographical coverage includes information from Mexico an integral part of the North American fauna past and present

Biotic changes in terrestrial environments around the Eocene-Oligocene transition Lucja A. Fostowicz-Frelik, Qian Li, Grégoire Métais, 2023-11-09

Biogeography of the West Indies Charles A. Woods, Florence E. Sergile, 2001-06-27 As a review of the status of biogeography in the West Indies in the 1980s the first edition of *Biogeography of the West Indies Past Present and Future* provided a synthesis of our current knowledge of the systematics and distribution of major plant and animal groups in the Caribbean basin The totally new and revised Second Edition *Biogeography*

The Beginning of the Age of Mammals Kenneth D. Rose, 2006-09-26

Publisher description **The White River Badlands** Rachel C. Benton, Dennis O. Terry, Emmett Evanoff, H. Gregory McDonald, 2015-05-25 This guide to the South Dakota region that houses the world's richest fossil beds does an excellent job of presenting the current state of knowledge. Choice The forbidding Big Badlands in Western South Dakota contain the richest fossil beds in the world. Even today these rocks continue to yield new specimens brought to light by snowmelt and rain washing away soft rock deposited on a floodplain long ago. The quality and quantity of the fossils are superb; most of the species to be found there are known from hundreds of specimens. The fossils in the White River Group and similar deposits in the American west preserve the entire late Eocene through the middle Oligocene, roughly 35–30 million years ago and more than thirty million years after non-avian dinosaurs became extinct. The fossils provide a detailed record of a period of abrupt global cooling and what happened to creatures who lived through it. This book is a comprehensive reference to the sediments and fossils of the Big Badlands and also touches on National Park Service management policies that help protect such significant fossils. Includes photos and illustrations. A worthy successor to the work of O. Harra. *Journal of Vertebrate Paleontology*

Paleontology of the Upper Eocene Florissant Formation, Colorado Herbert William Meyer, Dena M. Smith, 2008 The Florissant formation's fossil beds and petrified forest are interesting in themselves but also shed light on questions of paleoecology, macroevolution, and taphonomy: the study of the process of fossilization. Meyer National Park Service Florissant Fossil Beds National Monument Colorado and Smith U of Colorado Museum of Natural History *Paleontology* geological sciences UC Boulder introduce 11 papers examining Florissant fossil flora, fauna, mineralogy, and geochemistry through different periods and via a model of the role of microbial mats in its preservation. An integrated database. Web site to further related research is also discussed. The monograph is well illustrated with geologic maps and images of historical figures in the field and specimens but is not indexed.

Encyclopedia of Paleontology Ronald Singer, 2019-06-04 The Encyclopedia of Paleontology is designed to address the shortage of general reference works on both vertebrate and invertebrate paleontology and to serve the needs of students and lay persons interested in the field. As the encyclopedia aims to provide basic information, the majority of the 350 entries are devoted to explanations of paleontological concepts and techniques, examinations of the evolutionary development of particular organisms and biological features, profiles of major discoveries, and biographies of leading scientists. Each entry includes an essay and a further reading list. An international team of 200 leading experts in the field has prepared the illustrations and the essays, which range from concise descriptions to comprehensive discussions.
