Practies , Handbook of Automated Reasoning Alan J.A. Robinson,Andrei Voronkov,2001-06-21 Handbook of Automated Reasoning *Information Retrieval Systems* Gerald J. Kowalski,2007-08-23 The growth of the Internet and the availability of enormous volumes of data in digital form have necessitated intense interest in techniques to assist the user in locating data of interest The Internet has over 350 million pages of data and is expected to reach over one billion pages by the year 2000 Buried on the Internet are both valuable nuggets to answer questions as well as a large quantity of information the average person does not care about The Digital Library effort is also progressing with the goal of migrating from the traditional book environment to a digital library environment The challenge to both authors of new publications that will reside on this information domain and developers of systems to locate information is to provide the information and capabilities to sort out the non relevant items from those desired by the consumer In effect as we proceed down this path it will be the computer that determines what we see versus the human being The days of going to a library and browsing the new book shelf are being replaced by electronic searching the Internet or the library catalogs Whatever the search engines return will constrain our knowledge of what information is available An understanding of Information Retrieval Systems puts this new environment into perspective for both the creator of documents and the consumer trying to locate information

Automatic Indexing and Abstracting of Document Texts Marie-Francine Moens,2000-03-31 Automatic Indexing and Abstracting of Document Texts summarizes the latest techniques of automatic indexing and abstracting and the results of their application It also places the techniques in the context of the study of text manual indexing and abstracting and the use of the indexing descriptions and abstracts in systems that select documents or information from large collections Important sections of the book consider the development of new techniques for indexing and abstracting The techniques involve the following using text grammars learning of the themes of the texts including the identification of representative sentences or paragraphs by means of adequate cluster algorithms and learning of classification patterns of texts In addition the book is an attempt to illuminate new avenues for future research Automatic Indexing and Abstracting of Document Texts is an excellent reference for researchers and professionals working in the field of content management and information retrieval
