The Longman Literary Companion To Science:

The Longman Literary Companion to Science Walter Bruno Gratzner, 1989 The Literary Companion to Science is an exploration of the way in which science and scientists have been portrayed in fiction memoirs reportage and poetry Much of the material gathered here is from recent times though some is of earlier epochs A special aim has been wherever possible to link people phenomena and events of science represented in fiction or poetry to the reality as reflected in memoirs biography and journalism The anthology contains over 200 extracts by writers such as Gustave Flaubert Conan Doyle George Bernard Shaw H G Wells and Aldous Huxley linked by commentary Nothing in the book requires the reader to know any science to speak of nor does it seek to teach him anything The purpose is solely to entertain surprise sometimes stir and once in a while to dismay the reader and to reveal to him byways down which he may ramble at his leisure

Literature and Science John H. Cartwright, Brian Baker, 2005-06-21 A survey of the interaction between science and Anglo American literature from the late medieval period to the 20th century examining how authors thinkers and philosophers have viewed science in literary texts and used science as a window to the future Spanning six centuries this survey of the interplay between science and literature in the West begins with Chaucer's Treatise on the Astrolabe and includes commentary on key trends in contemporary literature Beginning with the birth of science fiction the authors examine the works of H G Wells and Jules Verne as well as Mary Shelley's Frankenstein within the context of a wider analysis of the impact of major historical developments like the Renaissance the scientific revolution the Enlightenment and Romanticism The book balances readings of literature with explanations of the impact of key scientific ideas Focusing primarily on British and American literature the book also takes an informed but accessible approach to the history of science with seminal scientific works discussed in a critical rather than overly theoretical manner

Comparative Criticism: Volume 13, Literature and Science E. S. Shaffer, 1992-02-13 Topics covered in this volume include literary Chinese as a language for science the history and principles of scientific translation in Europe the theatrical panorama in the 19th century and its roots in optical theory and experiment and an alternative perspective on Gerard Manley Hopkins

Publishing And The Advancement Of Science: From Selfish Genes To Galileo's Finger Michael Rodgers, 2014-01-27 Popular science books selling in their thousands even millions help us appreciate breakthroughs in understanding the natural world while highlighting the cultural importance of scientific knowledge Textbooks bring these same advances to students the scientists of tomorrow But how do these books come about And why are some of them so spectacularly successful This is the first ever insider's account of science publishing written by an editor intimately involved in the publication of some of the most famous bestsellers in the field Michael Rodgers reveals the stories behind these extraordinary books providing a behind the scenes view of the world of books authors and ideas These vivid and engaging narratives illuminate not only the challenges of writing about science but also how publishing itself works and the creative collaboration between authors and editors that lies at its heart The book

like many of those it describes is intended for a wide readership It will interest people in publishing past and present and also academics and students on publishing courses Scientists exploring territories outside their own speciality will enjoy it while there is invaluable advice for those planning their first popular book or textbook It will also appeal to readers with a humanities background who finding the concepts of science intriguing want to know more about how they are developed and communicated

The Arrow Of Time Roger Highfield, Peter Coveney, 2015-06-30 In our century the subject of time has become an area of serious inquiry for science Theories that contain time as a simple quantity form the basis of our understanding of many scientific disciplines yet the debate rages on why does there seem to be a direction to time an arrow of time pointing from past to future In this authoritative and accessible Sunday Times bestseller physical chemist Dr Peter Coveney and award winning science journalist Dr Roger Highfield demonstrate that the common sense view of time agrees with the most advanced scientific theory Time does in fact move like an arrow shooting forward into what is genuinely unknown leaving the past immutably behind The authors make their case by exploring three centuries of science offering bold reinterpretations of Newton's mechanics Einstein's special and general theories of relativity quantum mechanics and advancing the insights of chaos theory In their voyage through science the authors link apparently irreconcilable subjects from Einstein's obsession with causality to chaos theory from Marvell's winged chariot to that Monday morning feeling Finally drawing together the various interpretations of time they describe a novel way to give it a sense of direction And they call for a new fundamental theory to take account of the Arrow of Time Foreword by Ilya Prigogine Nobel laureate

The Undergrowth of Science Walter Bruno Gratzner, Walter Gratzner, 2001-09-13 This insightful and often amusing book looks at why good scientists often go wrong recounting the blind alleys that honest dedicated researchers have wandered down Photos and line illustrations

Doomsday Men P. D. Smith, 2024-09-04 The gripping untold story of the doomsday bomb the ultimate weapon of mass destruction Chillingly compelling New Scientist In 1950 Hungarian born scientist Leo Szilard made a dramatic announcement on American radio science was on the verge of creating a doomsday bomb For the first time in history mankind realized that he had within his grasp a truly God like power the ability to destroy life itself The shockwave from this statement reverberated across the following decade and beyond If detonated Szilard's doomsday device a huge cobalt clad H bomb would pollute the atmosphere with radioactivity and end all life on earth The scientific creators of such apocalyptic weapons had transformed the laws of nature into instruments of mass destruction and for many people in the Cold War there was little to distinguish real scientists from that fictional master of megadeath Stanley Kubrick's Dr Strangelove Indeed as P D Smith's chilling account Doomsday Men shows the dream of the superweapon begins in popular culture This is a story that cannot be told without the iconic films and fictions that portray our deadly fascination with superweapons from H G Wells's The War of the Worlds to Nevil Shute's On the Beach and Kubrick's Dr Strangelove or How I Learned to Stop Worrying and Love the Bomb Although scientists admitted it was possible to build the cobalt bomb no

superpower would admit to having created one However it remained a terrifying possibility striking fear into the hearts of people around the world The story of the cobalt bomb is an unwritten chapter of the Cold War but now P D Smith reveals the personalities behind this feared technology and shows how the scientists responsible for the twentieth century s most terrible weapons grew up in a culture dreaming of superweapons and Wellsian utopias He argues that in the end the doomsday machine became the ultimate symbol of humanity s deepest fears about the science of destruction Weaving together biography science and art Smith has created a compelling history of physics in the twentieth century focusing on the long lasting search for ever more destructive weapons from the development of chemical warfare in World War I Germany through the arms race of the Cold War Captivating and thoroughly referenced this chronicle should interest a wide audience from science and history buffs to armchair politicians Publishers Weekly **Personal Identity, the Self, and Ethics** F. Santos,Santiago Sia,2007-08-16 Going beyond the controversy surrounding personhood in non philosophical contexts this book defends the need for a credible philosophical conception of the person Engaging with John Locke Derek Parfit and P F Strawson the authors develop an original philosophical anthropology based on the work of Charles Hartshorne and A N Whitehead From Madman to Crime Fighter Roslynn D. Haynes,2017-09-13 From Madman to Crime Fighter is the most comprehensive study of the image of the scientist in Western literature and film *Primo Levi* Ian Thomson,2003-11-12 Praised in Britain as the best sort of history and a model of its kind Primo Levi A Life is certain to take its place as the standard biography of the man and a necessary companion to his works
