

CLOAK AND CIPHER

(4) Establishing the value of consonants is much more helpful in determining the message than the solution of vowels.

(5) 'Pattern' words are especially valuable. Bookkeeping, with the only triple sequence of double letters in English, is an example. The pattern of bookkeeping can be expressed in the short cryptographer leaves to spot the patterns of such words as 'tenor' (abcedef), 'mission' (abcedef), 'decided' (abcedef), and many more.

(6) Proper names, and other words likely to appear in a given message ('jewels,' or 'agent,' and the like), may enable you to break a simple substitution cipher almost without effort.

(7) In some instances it is possible to guess at the key of the cipher alphabet. Few people can memorize twenty-six letters and their cipher equivalents. For this reason most cipher alphabets are constructed from a long word or phrase that is easy to remember. First, any repeated letters are deleted, and then the alphabet is completed with the left-over letters. If the key were JAZZ CONCERT, for example, the cipher alphabet would be constructed as follows:

JAZZ CONCERT

Plain: ABCDEFGHIJKLMNOPQRSTUVWXYZ
Cipher: JAZZCONCERTBDFGHIKLMPQSUUVWXY

The cryptographer may be able to reconstruct a key such as this by doing some clever guessing after he has established the value of a handful of letters.

(8) The more the cryptographer knows about the people whom mail he is trying to read the better his chances are of solving their ciphers quickly.

An organization whose members must keep in touch through secret writing should have its own cryptographic department. This department should keep alert by solving cryptograms as puzzles, and cracking the messages of competing organizations.

HOW TO CRACK A SUBSTITUTION CIPHER 95

A good cryptographer would be able to solve rapidly such messages as the one at the end of this chapter.

The cryptogram puzzles in newspapers are scarcely a fair test. They are deliberately designed to upset frequency counts by using such words as ichthyology or pyreps, and they specialize in sentences in which every word begins with the same letter. In other words, the plain text means almost as little as the cipher.

Rules for Cracking Any Simple Substitution Cipher:

1. Run down the alphabet; it could be a Caesar cipher.
2. Make a frequency distribution chart; a context chart that shows repetitions and reversals is the most useful.
3. Mark repetitions and reversals.
4. Be on the look-out for pattern words and for any words that the correspondents are likely to use.
5. Try assigning the value of the high-frequency letters, E-T-A-O-N, etc., to the letters that appear most frequently.
6. Use the assumed letters to puzzle out words with other letters.
7. Reconstruct the enciphering alphabet, keeping an eye out for possible reciprocal alphabets, or for key word sequences.

Solve this sample message, and recover the key. (To check for a key word write the letters of the plain message in alphabetical order, with the cipher letters under them):

HTT IO QAT OMLNQ QCNDN GI RT
FHT MH NREUMHG NTYLTG FTNNCGTN
MN GI YHNG QAT ETQQT. OLTRSTHYMTN

Make some alphabet strips and use them to solve the following messages in the Julius Caesar cipher:

1. FIMRK WLEHSAIH
2. COXEY ZGVVKJ
3. ACJJ KCCRGLE EMEKMPPTMU YR DPTLIQ FMSQC
4. VMML UWZM UWVMO NWZ AIJWBOM
