*Change and Development in the Middle East (Routledge Revivals)* Clarke John,Bowen-Jones Howard,2013-10-14 The Middle East is a region of great traditional diversity which has been characterized by immense political social and economic changes still developing over thirty years after the title s original publication A group of oil rich countries have achieved great political significance and some of the highest per capita incomes in the world Much modern development has been

spatially polarized accentuating the concentrations of rapidly growing populations and posing severe problems for planners Cultivation and pastoralism the main traditional activities have often suffered from neglect and insufficient investment and both require re evaluation These are the issues addressed by this volume first published in 1981 which contains a series of overviews and case studies written by present or former members of staff and research students of the Department of Geography in the University of Durham in honour of W B Fisher Change and Development in the Middle East provides an interesting and relevant geographical and demographic analysis of this diverse and volatile region *Directory of Major Chinese Research Centers* 中国主要研究中心目录,1991

Sands,Laura A.

Reese,2017-11-06 Explores popular economic development strategies in midsize Canadian urban areas Roads to Prosperity Economic Development Lessons from Midsize Canadian Cities explores the relative prosperity of midsize Canadian urban areas population 50 000 to 400 000 over the past two decades Communities throughout North America have strived for decades to maintain and enhance the prosperity of their residents In the areas that are the focus of this research the results of these efforts have been mixed some communities have been relatively successful while others have fallen further behind the national averages Midsize cities often lack the resources both internal and external to sustain and enhance their prosperity Policies and strategies that have been successful in larger urban areas may be less effective or unaffordable in smaller ones Roads to Prosperity first examines the economic structure of forty two Canadian urban regions that fall within the midsize range to determine the economic specializations that characterize these communities and to trace how these specializations have evolved over the time period between 1991 and 2011 While urban areas with an economic base of natural resource or manufacturing industries tend to retain this economic function over the years communities that rely on the service industries have been much more likely to experience some degree of restructuring in their economies over the

past twenty years The overall trend among these communities has been for their employment profiles to become more similar and for their economic specialization to fade over time The second part of the book looks at a number of currently popular economic development strategies as they have been applied to midsize urban areas and their success and failures While there appears to be no single economic development strategy that will lead to greater prosperity for every community Sands and Reese explore the various factors that help explain why some work and others don't Those with an interest in urban planning and community development will find this monograph highly informative **General Technical Report NE**, 1980

**China and Europe on the New Silk Road** Marijk van der Wende, William C. Kirby, Nian Cai Liu, Simon Marginson, 2020-10-08 The global order based on international governance and multilateral trade mechanisms in the aftermath of the Second World War is changing rapidly and creating waves of uncertainty This is especially true in higher education a field increasingly built on international cooperation and the free movement of students academics knowledge and ideas Meanwhile China has announced its plans for a New Silk Road NSR and is developing its higher education and research systems at speed In this book an international and interdisciplinary group of scholars from Europe China the USA Russia and Australia investigate how academic mobility and cooperation is taking shape along the New Silk Road and what difference it will make if any in the global higher education landscape Opening chapters present the global context for the NSR the development of Chinese universities along international models and the history and outcomes of EU China cooperation The flows and patterns in academic cooperation along the NSR as they shape and have been shaped by China's universities are then explored in more detail The conditions for Sino foreign cooperation are discussed next with an analysis of regulatory frameworks for cooperation recognition data and privacy Comparative work follows on the cultural traditions and academic values similarities and differences between Sinic and Anglo American political and educational cultures and their implications for the governance and mission of higher education the role of critical scholarship and the state and standing of the humanities in China The book concludes with a focus on the Idea of a University the values underpinning its mission shape and purpose reflecting on the implications of China's rapid higher education development for the geopolitics of higher education itself **From Rail to Road and Back Again?** Colin Divall, 2016-03-03 The coming of the railways signalled the transformation of European society allowing the quick and cheap mass transportation of people and goods on a previously unimaginable scale By the early decades of the twentieth century however the domination of rail transport was threatened by increased motorised road transport which would quickly surpass and eclipse the trains only itself to be challenged in the twenty first century by a renewal of interest in railways Yet as the studies in this volume make clear to view the relationship between road and rail as a simple competition between two rival forms of transportation is a mistake Rail transport did not vanish in the twentieth century any more than road transport vanished in the nineteenth with the appearance of the railways Instead a mutual interdependence has always existed balancing the strengths and weaknesses of

each system It is that interdependence that forms the major theme of this collection Divided into two main sections the first part of the book offers a series of chapters examining how railway companies reacted to increasing competition from road transport and exploring the degree to which railways depended on road transportation at different times and places Part two focuses on road mobility interpreting it as the innovative success story of the twentieth century Taken together these essays provide a fascinating reappraisal of the complex and shifting nature of European transportation over the last one hundred years

*SUMP for Cities' Sustainable Development* Marija Burinskienė, Rasa Ušpalytė-Vitkūnienė, 2021-04-07 In a rapidly changing world it is necessary to increase the engagement of local authorities and stakeholders to make urban mobility cleaner and more sustainable The best way is to combine great ideas and innovative measures with political support This Special Issue consists of six articles analyzing the impact of SUMP Innovative measures have been proposed to change urban transport systems towards sustainability Chinese research has analyzed the tourist flow of Tibet using innovative technologies mobile phone data visualizations using GIS and social networks Lithuanian authors proposed three autonomous car travel development concepts that should become a conceptual tool in the development of ITS and C ITS An English scientific paper is based on a review of local transport policy documents from 13 cities in four countries Most cities seek to reduce car travel as a proportion of trips Experience from Slovenia shows that the comprehensive traffic calming approach has positive effects and contributes to achieving sustainable mobility Korean researchers used the GINI coefficient to evaluate the bus system to identify bus nodes in order of importance The last article described that multicriteria decision making methods have been successfully used for assessing the effectiveness of sustainable transport systems and a universal evaluation model was proposed

**The Contributions of Infrastructure to Economic Development** Christine Kessides, 1993-01-01 This paper reviews the linkages between infrastructure and economic development based on both formal empirical research and informal case studies The main thesis is that economic benefits result from investments in infrastructure only to the extent that they generate a sustainable flow of services valued by consumers Thus an analysis of infrastructures contributions to growth must look at the impacts of services as actually perceived not at indirect indicators that measure only aggregate provision of infrastructure capital The paper notes that macro and industry level research although having its limitations suggest a positive and statistically significant relationship between infrastructure and economic output However the conclusions derived from this research most of which derives from developed countries provide little specific guidance for policy To gain more practical insights about how infrastructure contributes to economic growth and to improved quality of life and to understand the welfare costs of inadequate or unreliable infrastructure it is necessary to look at microeconomic evidence Particularly interesting illustrations of these relationships are to be found in developing countries where there is wide variance in the availability and quality of

infrastructure
