Smallpox And Its Eradication History Of International Public Health No 6:

The Healing Paradox Steven Goldsmith, M.D., 2013-06-18 Why does Western medicine fail to cure chronic physical and mental illness Why do so many treatments and drugs work only for a limited time before eventually losing effectiveness or producing harmful side effects Dr Steven Goldsmith's answer is at once counterintuitive and commonsensical the root of the problem is our combative approach Instead of resisting and fighting our ailments we should cooperate with and even embrace them We should look for and apply treatments that are integrated with the causes of illness not regard illness as an enemy to conquer This hair of the dog principle is already widely evident in practice Take for example vaccines and inoculations which are small doses of the microbes that cause the diseases being prevented the use of the stimulant Ritalin to calm and ground people with Attention Deficit Hyperactivity Disorder and radiation which is both a well known cause of cancer and a well known method of treating it These are just a few of Goldsmith's many examples which he relays in clear evocative and thought provoking language Perhaps most compelling of all he explores reasons why this clearly effective principle is ignored by Western medicine Drawing on fascinating case studies and personal experiences from his forty year career as a medical doctor and psychiatrist as well as abundant clinical experimental and public health data that support his seemingly paradoxical assertion Dr Goldsmith presents an exciting revolutionary approach that will change the way you think about medicine and psychotherapy **Bibliography of the History of Medicine**, *Beyond Anthrax* Larry I.

Lutwick, Suzanne M. Lutwick, 2008-12-15 Biological warfare has unfortunately in the post 9 11 world become a significant topic of discussion in both the medical and lay presses In the wake of the biological letter bombs containing anthrax spores the possibility of biologic and or toxic attacks on civilians in any part of the world became no longer a possibility It is now part of common discussion and consciousness This book presents the history of the topics and clinically relevant discussions on those high risk Category A diseases beyond anthrax as well as a number of infections and toxins at the Category B level Importantly in addition the text includes sections on Public Health Infrastructure Public Health Law Surveillance Mental Health Management and Media Role all of which relate to epidemics of any sort not just intentional biological events *Beyond Anthrax The Weaponization of Infectious Diseases* is a product that should serve as a reference point for clinicians epidemiologists and public health personnel to understand in practical detail many of the aspects of weapons of biowarfare as well as the appropriate responses to them National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1989 *Disasters: Core Concepts and Ethical Theories* Dónal P. O'Mathúna, Vilijus Dranseika, Bert Gordijn, 2018-10-16 This Open Access Book is the first to examine disasters from a multidisciplinary perspective Justification of actions in the face of disasters requires recourse both to conceptual analysis and ethical traditions Part 1 of the book contains chapters on how disasters are conceptualized in different academic disciplines relevant to disasters Part 2 has chapters on how ethical issues that arise in relation to disasters can be addressed from a number of fundamental normative approaches in moral and

political philosophy This book sets the stage for more focused normative debates given that no one book can be completely comprehensive Providing analysis of core concepts and with real world relevance this book should be of interest to disaster scholars and researchers those working in ethics and political philosophy as well as policy makers humanitarian actors and intergovernmental organizations

The Principles and Practice of Disease Eradication Joel Breman,Jon Kim Andrus,2024 The core content of this textbook is designed to reflect the teaching elements of an intensive one week eradication course given first to graduate students at the School of Public Health Johns Hopkins University JHU in Baltimore United States during the summer of 2012 Given the rapidly changing medical and development world this textbook highlights essential issues for success illustrated by disease specific case studies

Modern Infectious Disease Epidemiology Alexander Krämer,Mirjam Kretzschmar,Klaus Krickeberg,2010-01-23 Hardly a day goes by without news headlines concerning infectious disease threats Currently the spectre of a pandemic of influenza A H1N1 is raising its head and heated debates are taking place about the pro s and con s of vaccinating young girls against human papilloma virus For an evidence based and responsible communication of infectious disease topics to avoid misunderstandings and overreaction of the public we need solid scientific knowledge and an understanding of all aspects of infectious diseases and their control The aim of our book is to present the reader with the general picture and the main ideas of the subject The book introduces the reader to methodological aspects of epidemiology that are specific for infectious diseases and provides insight into the epidemiology of some classes of infectious diseases characterized by their main modes of transmission This choice of topics bridges the gap between scientific research on the clinical biological mathematical social and economic aspects of infectious diseases and their applications in public health The book will help the reader to understand the impact of infectious diseases on modern society and the instruments that policy makers have at their disposal to deal with these challenges It is written for students of the health sciences both of curative medicine and public health and for experts that are active in these and related domains and it may be of interest for the educated layman since the technical level is kept relatively low

Mass Vaccination: Global Aspects - Progress and Obstacles Stanley A. Plotkin,2006-09-21 Mass immunization is the blitzkrieg of vaccination practice It serves to rapidly protect populations both because of the high coverage achieved and because of the herd immunity thereby induced However as in war mass immunization campaigns must be conducted intelligently with careful strategy and strong attention to logistics of supply and deployment If conducted badly mass immunization may fail or even be counter productive In this volume some of the most successful practitioners of mass immunization tell us about its art and science David Heymann and Bruce Aylward of WHO begin the book with a theoretical and practical overview of mass immunization Michael Lane who participated in the successful effort to eradicate smallpox relates how this was done using mass vaccination and other strategies Application of mass immunization by the US military is covered by John Grabenstein and Remington Nevin who have a large experience in these matters Karen Noakes and David Salisbury recount the striking s

cesses of mass immunization in the United Kingdom The global control of the clostridia that produce diphtheria toxin is described by Charles Vitek Hepatitis A is decreasing dramatically under the impact of large scale vaccination as Francis Andriani illustrates The French experience with Hepatitis B vaccination has been mixed and Francois Denis and Daniel Levy Bruhl explain the circumstances In uenza vaccination is an annual example of large scale campaigns the complexity of which is recounted by Benjamin Schwartz and Pascale Wortley

What's Wrong with the United Nations and How to Fix it

Thomas G. Weiss, 2013-05-20 Six decades after its establishment the United Nations and its system of related agencies and programs are perpetually in crisis While the twentieth century's world wars gave rise to ground breaking efforts at international organization in 1919 and 1945 today's UN is ill equipped to deal with contemporary challenges to world order Neither the end of the Cold War nor the aftermath of 9/11 has led to the next generation of multilateral institutions But what exactly is wrong with the UN and how can we fix it Is it possible to retrofit the world body In his succinct and hard hitting analysis Thomas G Weiss takes a diagnose and cure approach to the world organization's inherent difficulties In the first half of the book he considers the problems of international leadership and decision making in a world of self interested states the diplomatic difficulties caused by the artificial divisions between the industrialized North and the global South the structural problems of managing the UN's many overlapping jurisdictions agencies and bodies and the challenges of bureaucracy and leadership The second half shows how to mitigate these maladies and points the way to a world in which the UN's institutional ills might be cured His remedies are not based on pious hopes of a miracle cure for the UN but rather on specific and encouraging examples that could be replicated With considered optimism and in contrast to received wisdom Weiss contends that substantial change in intergovernmental institutions is plausible and possible The new and expanded second edition of this well regarded and indispensable book will continue to spark debate amongst students scholars and policymakers concerned with international politics as well as anyone genuinely interested in the future of the United Nations and multilateral cooperation
