Reconsidering a Century of Flight Janet Rose Daly Bednarek, Roger D. Launius, 2003 Contains twelve essays in which leading aerospace historians consider the role of aviation in the twentieth century exploring topics related to innovation and the technology of flight civil aeronautics and government policy aerial warfare and aviation in the American imagination

Inventing Flight John David Anderson, 2004 The invention of flight craft heavier than air counts among humankind's defining achievements In this book aviation engineer and historian John D Anderson Jr offers a concise and engaging account of the technical developments that anticipated the Wright brothers successful first flight on December 17 1903 While the accomplishments of the Wrights have become legendary we do well to remember that they inherited a body of aerodynamics knowledge and flying machine technology How much did they draw upon this legacy Did it prove useful or lead to dead ends Leonardo da Vinci first began to grasp the concepts of lift and drag which would be essential to the invention of powered flight He describes the many failed efforts of the so called tower jumpers from Benedictine monk Oliver of Malmesbury in 1022 to the eighteenth century Marquis de Bacqueville He tells the fascinating story of aviation pioneers such as Sir George Cayley who in a stroke of genius first proposed the modern design of a fixed wing craft with a fuselage and horizontal and vertical tail surfaces in 1799 and William Samuel Henson a lace making engineer whose ambitious aerial steam carriage was patented in 1842 but never built Anderson describes the groundbreaking nineteenth century laboratory

experiments in fluid dynamics the building of the world's first wind tunnel in 1870 and the key contributions of various scientists and inventors in such areas as propulsion propellers not flapping wings and wing design curved not flat He also explains the crucial contributions to the science of aerodynamics by the German engineer Otto Lilienthal later praised by the Wrights as their most im Kitty Hawk as they raced to become the first in flight Anderson shows how the brothers succeeded where others failed by taking the best of early technology and building upon it using a carefully planned step by step experimental approach They recognized for example that it was necessary to become a skilled glider pilot before attempting powered flight With vintage photographs and informative diagrams to enhance the text *Inventing Flight* will interest anyone who has ever wondered what lies behind the miracle of flight undergraduates that would tell the connected prehistory of the airplane from Cayley to the Wrights In light of the recognized excellence of his technical textbooks with their stimulating historical vignettes I can't think of a better person than Professor Anderson for the job He has the rare combination of technical and historical knowledge that is essential for the necessary balance *Inventing Flight* will be a welcome addition to undergraduate classrooms Walter G Vincenti Stanford University
