Stereoselective Biocatalytic And Chemical Transformations Of Carboxyfunctionalized Sulfoxides:

Stereoselective Biocatalytic and Chemical Transformations of Carboxy-functionalized Sulfoxides Christina Löwendahl, 1997 **Biotransformations in Organic Chemistry** Kurt Faber, 2012-12-06 The use of natural catalysts enzymes for the transformation of nonnatural man made organic compounds is not at all new they have been used for more than one hundred years employed either as whole cells cell organelles or isolated enzymes 1 2 Certainly the object of most of the early research was totally different from that of the present day Thus the elucidation of enzyme mechanisms was the main reason for biochemical pathways and research some decades ago It was mainly during the 1980s that the enormous potential of applying natural catalysts to transform non natural organic compounds was recognized What started as a trend in the late 1970s could almost be called a fashion in synthetic organic chemistry in the 1990s Although the early euphoria during the gold rush in this field seems to have eased somewhat there is still no limit to be seen for the future development of such methods As a result of this extensive recent research there have been an estimated 13 000 papers published on the subject To collate these data as a kind of super review would clearly be an impossible task and furthermore such a hypothetical book would be unpalatable for the non expert 3 7 *Stereoselective Multiple Bond-Forming Transformations in Organic Synthesis* Jean Rodriguez, Damien Bonne, 2015-04-08 Combining the important research topic of multiple bond forming transformations with green chemistry this book helps chemists identify recent sustainable stereoselective synthetic sequences Combines the important research topic of multiple bond forming transformations with green chemistry and sustainable development Offers a valuable resource for preparing compounds with multiple stereogenic centers an important field for synthetic chemists Organizes chapters by molecular structure of final products making for a handbook style resource Discusses applications of the synthesis of natural products and of drug intermediates Brings together otherwise scattered information about a number of key efficient chemical reactions Biotransformations in Organic Chemistry Kurt Faber, 1992 The use of natural catalysts enzymes for the transformation of non natural is not at all new they have been used for more man made organic compounds than one hundred years employed either as whole cells cell organelles or isolated enzymes 1 Certainly the object of most of the early research was totally different from that of the present day Thus the elucidation of biochemical pathways and enzyme mechanisms was in the foreground of the reasearch some decades ago It was mainly during the 1980s that the enormous potential of applying natural catalysts to transform non natural organic compounds was recognized What started as a trend in the late 1970s could almost be called a fashion in synthetic organic chemistry in the 1990s Although the early euphoria during the gold rush in this field seems to have eased somewhat there is still no limit to be seen for the future development of such methods As a result of this extensive recent research there have been an estimated 5000 papers published on the subject 2 To collate these data as a kind of super review would clearly be an impossible task and furthermore such a hypothetical book would be unpalatable for the non expert *Organochalcogen Compounds* Eder

João Lenardão, Claudio Santi, Gelson Perin, Diego Alves, 2022-05-17 Organochalcogen compounds reviews the state of the art in new green protocols involving organochalcogen compounds Se S and Te including the use of nonconventional reaction media alternative solvents and solvent free protocols to prepare these important compounds Bringing together several leading researchers in organochalcogen chemistry it provides an authoritative overview of the current state of the field and compiles recent advances in methodologies for the application of green chemistry principles in compound development These include the use of organochalcogen compounds as intermediates catalysts or target products across a range of applications The recent developments outlined in in the book reflect the efforts of the researchers in this area to move toward a more sustainable chemistry giving the book the dual benefit of highlighting the latest developments in the field while also showing how the principles of green chemistry can effectively be included in active research projects Thus it is a valuable reference for chemists particularly those working in organic green and synthetic chemistry across both academia and industry Highlights green synthetic methods with potential application in the synthesis of natural compounds or other biologically active scaffolds Explores the chemical modification of natural compounds by insertion of organochalcogen groups for the preparation of boosted bioactive semisynthetic molecules Discuss how redox catalysis and catalysis in flow conditions using eco friendly oxidant can provide new opportunities for the synthesis of linear ad cyclic derivatives **Studies in Natural Products Chemistry** Atta-ur- Rahman, 2013-10-22 Studies in Natural Products Chemistry Volume 10 Stereoselective Synthesis Part F is a collection of articles about studies on important organic molecules The book covers studies such as that on the synthesis of cembranes as well as its natural occurrence and bioactivity the stereoselective synthesis of Vitamin D the synthesis of isoquinolinequinone antibiotics and the nucleophilic addition chemistry of polyunsaturated carbonyl compounds Also covered in the book are subjects such as developments in the synthesis of medium ring ethers the biological properties chemistry and synthesis of didemnins and natural products synthesis based on novel ring transformation The text is recommended for organic chemists who would like to know more about the progresses in the study of important organic molecules and their implications in different fields *Stereoselective Synthesis in Organic Chemistry* Atta-ur-Rahman, Zahir Shah, 2011-12-21 This monumental tome by Prof Atta ur Rahman and Dr Zahir Shah presents a broad overall perspective of stereo selectivity in the synthesis of organic molecules Thus it treats a problem that is of fundamental importance and will be even more important in the future as the drug industry is required to supply 1000 0 optically pure compounds After an exposition of general principles the following subjects are treated Catalytic Reductions Heterogeneous Catalytic Hydrogenations Stereoselective Non Catalytic Reductions Stereoselective Carbon Carbon Bond Forming Reactions Asymmetric Oxidations Asymmetric Carbon Heteroatom Bond Formations Enzyme Catalyzed Reactions Stereoselective Free Radical Reactions and finally Miscellaneous Stereoselective Reactions For each subject a wealth of examples are given The highly selective reactions are mentioned along with reactions that are not This is helpful as it will teach the practical chemist

what to avoid Much progress has been made in the last two decades in the design of new very stereoselective reactions which can be applied in industry For example and in alphabetical order we can mention among other peers H C Brown hydroboration D C Evans carbon carbon bond formation R Noyori BINAP reagents for hydrogenation and K B Sharpless epoxidation and dihydroxylation of double bonds Thus the field has completely changed since the 1950s when optically pure compounds were always obtained by difficult resolutions of racemates and not by stereoselective reactions Organosulfur Chemistry in Asymmetric Synthesis Takeshi Toru, Carsten Bolm, 2008-09-08 In this first book to gather the information on this hot topic otherwise widely spread throughout the literature experienced editors and top international authors cover everything the reader needs from the synthesis of chiral organosulfur compounds to applications and catalysis Asymmetric synthesis of chiral sulfinates and sulfoxides Synthesis and use of chiral dithioacetal derivatives ylids chiral sulfoximines and sulfinamides Use of chiral sulfoxides as ligands in catalysis Asymmetric reactions of alpha sulfenyl alpha sulfinyl and alpha sulfonyl carbanions As a result readers will be able to improve their own performance in asymmetric synthesis
