Stereospecific Polymerization Of Isoprene:

Stereospecific Polymerization of Isoprene Elena Ceausescu, 2013-10-22 Stereospecific Polymerization of Isoprene a doctoral dissertation by Dr Elena Ceausescu is a study of the synthesis of cis 1 4 polyisoprene rubber an elastomer of synthetic rubber whose structure and properties are similar to that of natural rubber This elastomer is primarily used in the manufacture of tires belts hoses matting flooring dampeners and other synthetic rubber goods The book is organized into two parts Part I the Ph D thesis focuses on the explanation and exposition of the polymerization reaction properties of the polymer and certain theoretical aspects related to the polymer s reaction mechanism and kinetics Part II presents data derived from an extensive variety of experiments and tests intended to serve as a basis for the industrial production of cis 1 4 polyisoprene rubber The text will be an interesting book for materials engineers industrial engineers chemists and science students engaged in the study of polymers

Stereoregular Polymers and Stereospecific Polymerizations Giulio Natta, Ferdinando Danusso, 2013-10-22 Stereoregular Polymers and Stereospecific Polymerizations The Contributions of Giulio Natta and his School to Polymer Chemistry Volume 1 covers the developments in understanding the reactions nomenclature and physico chemical properties of polymers This volume is composed of 82 chapters and starts with surveys of the synthesis and crystal structure of polymers Significant chapters are devoted to the characterization of crystalline polymers with emphasis on the determination of their viscosity and molecular weight Other chapters deal with stereospecific polymers of olefins mechanism of stereospecific catalysis reaction kinetics This volume also considers the polymerization of synthetic elastomers and the copolymerization of olefins as well as their reaction kinetics The remaining chapters describe the X ray characterization of isotactic polymers This book is directed toward polymer chemists

Ziegler-Natta Catalysts Polymerizations John Jr. Boor, 2012-12-02 Ziegler Natta Catalysts and Polymerizations reviews the general aspects of Ziegler Natta catalysts and polymerizations of olefins dienes and many other types of monomers Topics covered include the physical state of the polymer during polymerization modification of Ziegler Natta catalysts by third components and termination of polymer chain growth The oxidation state of catalysts and active centers is also discussed along with copolymerizations and block polymerizations This book is comprised of 23 chapters and begins with an overview of Ziegler Natta catalysts and polymerizations their historical origins scientific and commercial importance and major advances in polymer science The next chapter focuses on definitions and stereochemistry of Ziegler Natta catalysts together with analytical methods used to identify and quantitatively measure their structures Some of the polymers produced commercially with Ziegler Natta catalysts are considered The discussion then turns to mechanisms for initiating and propagating olefins mechanisms for stereochemical control of conjugated and nonconjugated dienes and the basic kinetic parameters that characterize Ziegler Natta polymerizations This monograph is written especially for chemistry and engineering graduate students and for industrial chemists engineers and managers who may become involved in a Ziegler Natta problem

Stereospecific Polymerization Bernard Lars Johnson, 1966 *Stereoselective Polymerization with Single-Site Catalysts* Lisa S. Baugh, Jo Ann M. Canich, 2007-11-29 New synthetic techniques allow chemists to modify polymer microstructures more precisely than ever making it possible to design materials that meet increasingly demanding performance requirements Written and edited by experts in the field *Stereoselective Polymerization with Single Site Catalysts* reviews how the relative stereochemistry of **Polymer Synthesis: Theory and Practice** Dietrich Braun, Harald Cherdron, Helmut Ritter, 2013-06-29 This Laboratory Manual contains detailed descriptions for the synthesis and characterization of macromolecules Around 110 elaborated examples consisting of descriptions of experiments as well as sufficient theoretical explanations enable the reader to learn about the syntheses modification characterization and properties of polymers including recent developments All experiments can be conducted with adequate laboratory equipment Suitable for students in organic and polymer chemistry as well as for chemists in industry who want to acquaint themselves with the theoretical and practical aspects of macromolecular chemistry *Ionic Polymerization and Living Polymers* M. Szwarc, M. van Beylen, 2012-12-06 More than simply an up to date review of ionic polymerization this book presents an in depth and critical comparison of the anionic and cationic polymerization of vinyl monomers and heterocyclic compounds These different modes of ionic polymerization are examined with regard to their capacity for producing living polymers The concept of living polymers is re examined and redefined in light of current knowledge of ionic polymerization and possible side reactions Throughout the authors offer perceptive insights into the basic concepts of polymerization chemistry and polymerization reaction mechanisms The book begins with a review of ionic and radical polymerizations the development of ionic polymerization living and dormant polymers and polymerizability It goes on to consider important aspects of the structure and properties of ionic species initiation and propagation of ionic polymerization polymerization steps other than initiation or propagation such as termination isomerization transfer backbiting and degradation and ionic copolymerization *Ionic Polymerization and Living Polymers* is a much needed advanced text that will be widely read and referred to by polymer scientists macromolecular chemists and materials scientists **Handbook of Polymer Research** Gennadii Efremovich Zaikov, 2006 Polymers are substances containing a large number of structural units joined by the same type of linkage These substances often form into a chain like structure Starch cellulose and rubber all possess polymeric properties Today the polymer industry has grown to be larger than the aluminium copper and steel industries combined Polymers already have a range of applications that far exceeds that of any other class of material available to man Current applications extend from adhesives coatings foams and packaging materials to textile and industrial fibres elastomers and structural plastics Polymers are also used for most composites electronic devices biomedical devices optical devices and precursors for many newly developed high tech ceramics This new volume presents leading edge research in this rapidly changing and evolving field Catalysis by Polymer-Immobilized Metal Complexes Anatoly D. Pomogailo, 2020-08-18 Deals with a new and promising

field developed during the last two decades on the boundary between homogeneous and heterogeneous catalysis This book presents general information on catalysis for a wide range of organic reactions e g hydrogenation and oxidation reactions and polymerization transformations Special attention is paid to electro and photochemical stimulation of catalytic processes in the presence of immobilized metal complexes Other topics covered are the quantitative data on the comparison of catalyses by mobile and immobilized metal complexes main factors affecting the activity of these catalytic systems and methods of optimizing their control and specific problems of catalysis by fixed complexes e g ligand exchange and electron transfer in metal polymer systems macromolecular effects and polyfunctional catalysis Oligomerization of Chemical and Biological Compounds Claire Lesieur, 2014-06-18 Many thanks to the authors for high quality chapters and to the referees for helping improve the manuscripts The book is interdisciplinary it covers fields from organic chemistry to mathematics and raises different aspects of oligomerization It is a great source of information as every chapter introduces general knowledge and deep details Mixing communities is to instigate novel ideas and hopefully help looking at oligomerization with new eyes
