Stereotyping As Inductive Hypothesis Testing:

Stereotyping as Inductive Hypothesis Testing Klaus Fiedler,Eva Walther,2004-07-31 Stereotyping as Inductive Hypothesis Testing explicates the proposition that many stereotypes originate not so much in individual brains but in the stimulus environment that interacts with and constitutes the social individual

Stereotyping as Inductive Hypothesis Testing Klaus Fiedler,Eva Walther,2004-07-31 Traditional social hypotheses have a built in tendency to verify themselves and so involuntarily resist attempts at stereotype change or correction This is the insight demonstrated and discussed as the start point for an alternative approach to the problem of stereotyping and hypothesis testing Stereotyping as Inductive Hypothesis Testing explicates the proposition that many stereotypes originate not so much in individual brains but in the stimulus environment that interacts with and constitutes the social individual This cognitive ecological approach is then used to analyse the different aspects of language sign systems and communication that can implicitly govern hypothesis testing procedures and lead to circular or reinforcing outcomes The authors describe factors in tests such as judgment memory and expectation and go on to suggest viable ecological learning approaches to them An original research project based on a classroom situation is used to demonstrate and verify findings The cognitive ecological approach is then contextualised in relation to both the traditional approaches it can replace and the contemporary statistical sampling practices it can improve Written with a profound understanding of the link between theoretical rigour and good empirical research practice this monograph will be invaluable to anyone with an interest in stereotyping or who wishes to enhance the reliability and self awareness of their research methods

social influence and political behavior **Intergroup Contact Theory** Loris Vezzali, Sofia Stathi, 2016-12-08 Intergroup contact theory has been one of the most influential theories in social psychology since it was first formulated by Gordon Allport in 1954. This volume highlights via a critical lens the most notable recent developments in the field demonstrating its vitality and its capacity for reinvention and integration with a variety of seemingly distinct research areas. In the last two decades the research focus has been on the variables that explain why contact improves intergroup attitudes and when the contact prejudice relationship is stronger. Current research highlights that contact is not a panacea for prejudice but it can represent a useful tool that can contribute to the improvement of intergroup relations. The book includes coverage of a number of previously under researched fields which extend the full potential of contact theory within the personality acculturation and developmental domains. The chapters also examine the methodological advances in the field and the applied implications. The book offers a rich picture of the state of the field and future directions for research that will be invaluable to students and scholars working in social psychology and related disciplines. It aims to provide fertile ground for the development of new exciting and dynamic research ideas in intergroup relations.
