Still Image Compression On Parallel Computer Architectures:

Still Image Compression on Parallel Computer Architectures Savitri Bevinakoppa, 1998-11-30 Still Image Compression on Parallel Computer Architectures investigates the application of parallel processing techniques to digital image compression. Digital image compression is used to reduce the number of bits required to store an image in computer memory and or transmit it over a communication link. Over the past decade, advancements in technology have spawned many applications of digital imaging such as photo videotex, desktop publishing, graphics arts, color facsimile, newspaper wire phototransmission, and medical imaging. For many other contemporary applications such as distributed multimedia systems, rapid transmission of images is necessary. Dollar cost as well as time cost of transmission and storage tend to be directly proportional to the volume of data. Therefore, application of digital image compression techniques becomes necessary to minimize costs. A number of digital image compression algorithms have been developed and standardized. With the success of these algorithms, research effort is now directed towards improving implementation techniques. The Joint Photographic Experts Group (JPEG) and Motion Photographic Experts Group (MPEG) are international organizations which have developed digital image compression standards. Hardware VLSI chips which implement the JPEG image compression algorithm are available. Such hardware is specific to image compression only and cannot be used for other image processing applications. A flexible means of implementing digital image compression algorithms is still required. An obvious method of processing different imaging applications on general purpose hardware platforms is to develop software implementations. JPEG uses an 8x8 block of image samples as the basic element for compression. These blocks are processed sequentially. There is always the possibility of having similar blocks in a given image. If similar blocks in an image are located, then repeated compression of these blocks is not necessary. By locating similar blocks in the image, the speed of compression can be increased and the size of the compressed image can be reduced. Based on this concept, an enhancement to the JPEG algorithm is proposed called Block Comparator Technique (BCT). Still Image Compression on Parallel Computer Architectures is designed for advanced students and practitioners of computer science. This comprehensive reference provides a foundation for understanding digital image compression techniques and parallel computer architectures.

Electronic Business and Education Wendy Chin, Frederic*accents Patricelli, V. Milutinovic, 2012-12-06

In order to establish technical prerequisites for efficient electronic business and education on the Internet, appropriate system support is needed as a vital condition for maximization of both short term and long term profits. Electronic Business and Education: Recent Advances in Internet Infrastructures discusses current research topics in the domain of system support for e business and e education on the Internet and stresses the synergistic interaction of these two components. Attention is given to both scientific and engineering issues. Electronic Business and Education: Recent Advances in Internet Infrastructures is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry, particularly in the area of e business and e education on the Internet. There is no longer any question that the Internet and electronic communication are the major new tools for collaborative advances in the creation of new knowledge and in future learning. Excerpt from Foreword by Robert C. Richardson, Nobel Laureate 1996, Cornell University, USA.

Coding and Modulation for Digital Television Gordon M. Drury, Garik Markarian, Keith Pickavance, 2006-04-11

Coding and Modulation for Digital Television presents a comprehensive description of all error control coding and digital modulation techniques used in Digital Television (DTV). This book illustrates the relevant elements from the expansive theory of channel coding to how the transmission environment dictates the choice of error control coding and digital modulation schemes. These elements are presented in such a way that both the mathematical integrity and understanding for engineers are combined in a complete form and supported by a number of practical examples. In addition, the book contains descriptions

of the existing standards and provides a valuable source of corresponding references Coding and Modulation for Digital Television also features a description of the latest techniques providing the reader with a glimpse of future digital broadcasting These include the concepts of soft in soft out decoding turbo coding and cross correlated quadrature modulation all of which will have a prominent future in improving efficiency of the next generation DTV systems Coding and Modulation for Digital Television is essential reading for all undergraduate and postgraduate students broadcasting and communication engineers researchers marketing managers regulatory bodies governmental organizations and standardization institutions of the digital television industry

Infrastructure for Electronic Business on the Internet

Veljko Milutinovic, 2012-12-06 Design is an art form in which the designer selects from a myriad of alternatives to bring an optimum choice to a user In many complex of optimum is difficult to define Indeed the users systems the notion themselves will not agree so the best system is simply the one in which the designer and the user have a congruent viewpoint Compounding the design problem are tradeoffs that span a variety of technologies and user requirements The electronic business system is a classically complex system whose tradeoff criteria and user views are constantly changing with rapidly developing underlying technology Professor Milutinovic has chosen this area for his capstone contribution to the computer systems design This book completes his trilogy on design issue in computer systems His first work Surviving the Design of a 200 MHz RISC Microprocessor 1997 focused on the tradeoffs and design issues within a processor His second work Surviving the Design of Microprocessor and Multiprocessor Systems 2000 considers the design issues involved with assembling a number of processors into a coherent system Finally this book generalizes the system design problem to electronic commerce on the Internet a global system of immense consequence

Veljko Milutinovic, Frédéric Patricelli, 2012-12-06 As a foreword here we publish an email letter of Late Professor Herb Simon Nobel Laureate that he wrote on the occasion of the death of the father of a friend This letter of condolence more than any other wisdom tells about the essence of the process of scientific creation which is so important for both the specific subject being covered by this book and for the general science When asked to address an SSGRR conference in Italy prior to his death Professor Herb Simon agreed that these lines be presented to all those who are interested in understanding the real essence of their own scientific struggle Dear Professor Milutinovic I want to extend my deepest sympathy to you and your family on the death of your father His career was a very distinguished one and his life spanned a most complex and difficult sequence of epochs in your country's history Our generation I am just a year younger than he was like all its predecessors leaves many tasks hopefully no more than it inherited for the next generation to take up but even knowing that it must be so does not remove one's sense of loss in the parting

Multimedia Mining Chabane Djeraba, 2012-12-06 Multimedia Mining A Highway to Intelligent Multimedia Documents brings together experts in digital media content analysis state of art data mining and knowledge discovery in multimedia database systems knowledge engineers and domain experts from diverse applied

disciplines Multimedia documents are ubiquitous and often required if not essential in many applications today This phenomenon has made multimedia documents widespread and extremely large There are tools for managing and searching within these collections but the need for tools to extract hidden useful knowledge embedded within multimedia objects is becoming pressing and central for many decision making applications The tools needed today are tools for discovering relationships between objects or segments within multimedia document components such as classifying images based on their content extracting patterns in sound categorizing speech and music and recognizing and tracking objects in video streams

Shape Analysis and Retrieval of Multimedia Objects Maytham H. Safar, Cyrus Shahabi, 2012-12-06 Shape Analysis and Retrieval of Multimedia Objects provides a comprehensive survey of the most advanced and powerful shape retrieval techniques used in practice today In addition this monograph addresses key methodological issues for evaluation of the shape retrieval methods Shape Analysis and Retrieval of Multimedia Objects is designed to meet the needs of practitioners and researchers in industry and graduate level students in Computer Science

Computer Architecture '98 John Morris, 1998-06-01 The third in the series of the Australasian Computer Architecture Conferences ACAC98 was held in Perth Australia on the 2nd 3rd of February 1998 This years submissions saw papers coming from Australia Austria China Germany Japan New Zealand Portugal Singapore Taiwan and the United States all presenting both novel as well as conventional architectural ideas The 20 papers presented in this volume also cover the vital area of connection between processors from geographically separated to closely coupled systems

Signal Processing for Telecommunications and Multimedia Tadeusz A. Wysocki, Bahram Honary, Beata J. Wysocki, 2005-12-28 The unprecedented growth in the range of multimedia services offered these days by modern telecommunication systems has been made possible only because of the advancements in signal processing technologies and algorithms In the area of telecommunications application of signal processing allows for new generations of systems to achieve performance close to theoretical limits while in the area of multimedia signal processing the underlying technology making possible realization of such applications that not so long ago were considered just a science fiction or were not even dreamed about We all learnt to adopt those achievements very quickly but often the research enabling their introduction takes many years and a lot of efforts This book presents a group of invited contributions some of which have been based on the papers presented at the International Symposium on DSP for Communication Systems held in Coolangatta on the Gold Coast Australia in December 2003 Part 1 of the book deals with applications of signal processing to transform what we hear or see to the form that is most suitable for transmission or storage for a future retrieval The first three chapters in this part are devoted to processing of speech and other audio signals The next two chapters consider image coding and compression while the last chapter of this part describes classification of video sequences in the MPEG domain

Still Image Compression On Parallel Computer Architectures Book Review: Unveiling the Power of Words

In some sort of driven by information and connectivity, the ability of words has be evident than ever. They have the capability to inspire, provoke, and ignite change.
