Smarandache Loops:

Smarandache Loops W. B. Vasantha Kandasamy,2002 Generally in any human field a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B which is embedded with a stronger structure S By proper subset one understands a set included in A different from the empty set from the unit element if any and from A These types of structures occur in our every day s life that s why we study them in this book As an example A non empty set L is said to form a loop if on L is defined a binary operation called product denoted by such that For all a b I L we have a b I L closure property There exists an element e I L such that a e e a a for all a I L e is the identity element of L For every ordered pair a b I L L there exists a unique pair x y in L such that ax b and ya b Whence A Smarandache Loop or S loop is a loop L such that a proper subset M of L is a subgroup with respect to the same induced operation *Scientia Magna, Vol. 2, No. 1, 2006* Zhang Wenpeng,W.
