Komninos,2019-12-05 Internet and World Wide Web platforms big data analytics software social media and civic technologies allow for the creation of smart ecosystems in which connected intelligence emerges and disruptive social and eco innovation flourishes This book focuses on three grand challenges that matter for any territory no matter where it is located i smart growth a path that more and more cities regions and countries are adopting having realised the unlimited potential of growth that is based on knowledge innovation and digital technologies ii safety and security which is a pre requisite for quality of life in a world of intense social natural and technological threats and iii sustainability use of renewable energy protection of living ecosystems addressing climate change and global warming in a period of rapid urbanisation that makes established sustainability models and planning patterns quickly obsolete The core argument of the book is that problem solving and novel solutions to these grand challenges emerge in smart ecosystems through connected intelligence It is the broadest form of intelligence that combines capabilities from heterogeneous actors humans organisations machines and propel problem solving through externalities and resource agglomeration user engagement and collaboration awareness and behaviour change This book will be of interest to students and researchers of urban and regional studies innovation studies economic geography and urban planning as well as urban policy makers *China's New Urbanization* Chuanglin Fang,Danlin

Yu,2016-02-25 This book answers the call for New Urbanization and proposes a 5 9 6 national spatial layout plan for the urbanization of the 770 major cities in China This macro pattern is based on a few major metropolises at the center and other cities supporting and benefitting from these metropolises to form a pyramid like urban hierarchical system The book also presents a comprehensive regionalization plan for China s New Urbanization and strategic approaches to improving the quality of this New Urbanization Currently China is aggressively promoting a so called New Urbanization which has been regarded as one of the primary ways to build a moderately prosperous society to address critical issues related to agriculture rural regions and farmers to expand domestic demand and promote industrial innovation and to realize the China Dream From a systematic perspective and using recently released urban data the authors analyze the current status of New Urbanization in China and also investigate the various potential problems and obstacles to its concrete implementation Based on the analyses and investigations the authors propose strategic directions paths and basic principles for China s New Urbanization In addition they clearly identify the three different modes of New Urbanization namely the general mode differentiated mode and gradual mode Today many scholars argue that China s urban regions are experiencing a highly unsustainable mode of development Chinese cities are heavily burdened by the so called urban diseases which are

characterized e.g. by congested traffic, polluted water and air and a lack of open and green spaces. Traditional urbanization, which primarily focuses on economic development, must be fundamentally reformed. New Urbanization, which focuses on integrated economic development, social integration and space environmental sustainability, or simply put, on the quality of urbanization, has been called for to provide a potential cure for these urban diseases. Due to the vastness of China's population and its rapidly growing economic, political and cultural relationships with the rest of the world, the book demonstrates that the success of this New Urbanization is critical not only to the future of urban China but also the future of urbanization worldwide. The book offers a valuable reference work for all researchers, graduate students and policy makers interested in China's urban development.

E-business Brian Stanford-Smith, Paul T. Kidd, 2000. How can the Internet and world wide web improve my long term competitive advantage? This book helps answer this question by providing a better understanding of the technologies, their potential applications and the ways they can be used to add value for customers, support new strategies and improve existing operations. It is not just about e-commerce but the broader theme of e-business, which affects products, business processes, strategies and relationships with customers, suppliers, distributors and competitors. To cover future trends, the editors have collected papers from authors operating at the frontiers of the developments so the reader can more appreciate the directions in which these technologies are heading. The resulting 165 essays have been collated into ten sections which have been grouped in three parts: key issues, applications, areas and applications, tools and technologies. A business rarely makes radical changes but is constantly making adjustments to circumstances. Businesses must now adapt to the global implications of the Internet and world wide web. This book hopes to aid awareness of the implications so that the changes are managed wisely.
