New Quests

in Stellar Astrophysics: The Link Between Stars and Cosmology Miguel Chávez, Alessandro Bressan, Alberto Buzzoni, Divakara Mayya, 2012-12-06 Stellar astrophysics still provides the basic framework for deciphering the imprints left over by the evolving universe on all scales. Advances or shortcomings in the former field have direct consequences in our ability to understand the global properties of the latter. This volume contains the most recent updates on a variety of topics that though independent by themselves are inevitably connected on a cosmological scale. These include comprehensive articles by leaders in fields extending from stellar atmospheres through properties of the stellar component in the Milky Way up to the stellar environment in high redshift galaxies. The wide coverage of astrophysical themes makes this volume very valuable for researchers and Ph D students in astrophysics. *Introduction to Stellar Astrophysics: Volume 3* Erika Böhm-Vitense, 1989 This book is the final one in a series of three texts which together provide a modern complete and authoritative account of our present knowledge of the stars. It discusses the internal structure and the evolution of stars and is completely self contained. There is an emphasis on the basic physics governing stellar structure and the basic ideas on which our understanding of stellar structure is based. The book also provides a comprehensive discussion of stellar evolution. Careful comparison is made between theory and observation and the author has thus provided a lucid and balanced introductory text for the student. As for volumes 1 and 2 volume 3 is self contained and can be used as an independent textbook. The author has not only taught but has also published many original papers in this subject. Her clear and readable style should make this text a first choice for undergraduate and beginning graduate students taking courses in astronomy and particularly in stellar astrophysics. **A Concise History of Solar and Stellar Physics** Jean-Louis Tassoul, Monique Tassoul, 2014-10-05 This book provides a comprehensive overview of the history of ideas about the sun and the stars from antiquity to modern times. Two theoretical astrophysicists who have been active in the field since the early 1960s tell the story in fluent prose. About half of the book covers most of the theoretical research done from 1940 to the close of the twentieth century, a large body of work that has to date been little explored by historians. The first chapter which outlines the period from about 3000 B C to 1700 A D shows that at every stage in history human beings have had a particular understanding of the sun and stars and that this has continually evolved over the centuries. Next the authors systematically address the immense mass of observations astronomy accumulated from the early seventeenth century to the early twentieth. The remaining four chapters examine the history of the field from the physicists perspective, the emphasis being on theoretical work from the mid 1840s to the late 1990s, from thermodynamics to quantum mechanics, from nuclear physics and magnetohydrodynamics to the remarkable advances through to the late 1960s and finally to more recent theoretical work. Intended mainly for students and teachers of astronomy, this book will also be a useful reference for practicing astronomers and scientifically curious general readers. **Panel Reportsâ€”"New Worlds, New Horizons in Astronomy and Astrophysics** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Board on

Physics and Astronomy, Committee for a Decadal Survey of Astronomy and Astrophysics, Program Prioritization Panels, Science Frontiers Panels, 2011-06-18 Every 10 years the National Research Council releases a survey of astronomy and astrophysics outlining priorities for the coming decade The most recent survey titled *New Worlds New Horizons in Astronomy and Astrophysics* provides overall priorities and recommendations for the field as a whole based on a broad and comprehensive examination of scientific opportunities infrastructure and organization in a national and international context Panel Reports *New Worlds New Horizons in Astronomy and Astrophysics* is a collection of reports each of which addresses a key sub area of the field prepared by specialists in that subarea and each of which played an important role in setting overall priorities for the field The collection published in a single volume includes the reports of the following panels Cosmology and Fundamental Physics Galaxies Across Cosmic Time The Galactic Neighborhood Stars and Stellar Evolution Planetary Systems and Star Formation Electromagnetic Observations from Space Optical and Infrared Astronomy from the Ground Particle Astrophysics and Gravitation Radio Millimeter and Submillimeter Astronomy from the Ground The Committee for a Decadal Survey of Astronomy and Astrophysics synthesized these reports in the preparation of its prioritized recommendations for the field as a whole These reports provide additional depth and detail in each of their respective areas Taken together they form an essential companion volume to *New Worlds New Horizons A Decadal Survey of Astronomy and Astrophysics* The book of panel reports will be useful to managers of programs of research in the field of astronomy and astrophysics the Congressional committees with jurisdiction over the agencies supporting this research the scientific community and the public

[Stellar Astrophysics with the World's Largest Telescopes](#) Joanna Mikolajewska, Arkadiusz Olech, 2005-03-29 The book reviews the most timely and interesting problems of stellar astrophysics particularly those suitable for studies with the world's largest telescopes and it can serve as an introduction to such studies In particular it gives a comprehensive presentation of state of the art research in stellar and planetary system formation extra solar planets final stages of single and binary stellar evolution and stellar populations in the Local Group of Galaxies including observational techniques and technologies applicable to those important fields The book also presents the most important unresolved problems of stellar astrophysics intended to help identify directions for future research

Stellar Astrophysics for the Local Group A. Aparicio, A. Herrero, F. Sánchez, 1998-06-13 A review of the new subject of extragalactic stellar astrophysics for both graduate students and researchers working in astrophysics
