Singularity Theory and its Applications Mark Roberts, Ian Stewart, 2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are original research stimulated by the symposium and workshop All have been refereed and none will appear elsewhere The main topic of volume II is new methods for the study of bifurcations in nonlinear dynamical systems and applications of these

Singularity Theory and its Applications David Mond, James Montaldi, 2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are original research stimulated by the symposium and workshops All have been refereed and none will appear elsewhere The main topic deformation theory is represented by several papers on descriptions of the bases of versal deformations and several more on descriptions of the generic fibres Other topics include stratifications and applications to differential geometry Coding Theory and Algebraic Geometry

Henning Stichtenoth, Michael A. Tsfasman, 2006-11-15 About ten years ago V D Goppa found a surprising connection between the theory of algebraic curves over a finite field and error correcting codes The aim of the meeting Algebraic Geometry and Coding Theory was to give a survey on the present state of research in this field and related topics The proceedings contain research papers on several aspects of the theory among them Codes constructed from special curves and from higher dimensional varieties Decoding of algebraic geometric codes Trace codes Exponential sums Fast multiplication in finite fields Asymptotic number of points on algebraic curves Sphere packings **Geometric Aspects of**

Classical Diophantine Equations Vladimir G. Sprindzuk, 2006-11-15 The author had initiated a revision and translation of *Classical Diophantine Equations* prior to his death Given the rapid advances in transcendence theory and diophantine approximation over recent years one might fear that the present work originally published in Russian in 1982 is mostly superseded That is not so A certain amount of updating had been prepared by the author himself before his untimely death Some further revision was prepared by close colleagues The first seven chapters provide a detailed virtually exhaustive discussion of the theory of lower bounds for linear forms in the logarithms of algebraic numbers and its applications to obtaining upper bounds for solutions to the eponymous classical diophantine equations The detail may seem stark the author fears that the reader may react much as does the tourist on first seeing the centre Pompidou notwithstanding that Sprindzuk maintains a pleasant and chatty approach full of wise and interesting remarks His emphases well warrant now that the book appears in English close study and emulation In particular those emphases allow him to devote the eighth chapter to an analysis of the interrelationship of the class number of algebraic number fields involved and the bounds on the heights of the solutions of the diophantine equations Those ideas warrant further development The final chapter deals with effective aspects of the Hilbert Irreducibility Theorem harkening back to earlier work of the author There is no other congenial entry point to the ideas of the last two chapters in the literature

Lie Algebras and Lie Groups Jean-Pierre Serre, 2009-02-07 This book reproduces J P Serre's 1964 Harvard lectures The aim is to introduce the reader to the Lie dictionary Lie algebras and Lie groups Special features of the presentation are its emphasis on formal groups in the Lie group part and the use of analytic manifolds on p -adic fields Some knowledge of algebra and calculus is required of the reader but the text is easily accessible to graduate students and to mathematicians at large

Handbook of Geometry and Topology of Singularities VII José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2025-03-01 This is the seventh volume of the Handbook of Geometry and Topology of Singularities a series that aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of fourteen chapters that provide an in depth and reader friendly introduction to various important aspects of singularity theory The volume begins with an outstanding exposition on Jim Damon s contributions to singularity theory and its applications Jim passed away in 2022 and he was one of the greatest mathematicians of recent times having made remarkable contributions to singularity theory and its applications mostly to medical image computing The next chapter focuses on the singularities of real functions and their bifurcation sets Then we look at the perturbation theory of polynomials and linear operators complex analytic frontal singularities the global singularity theory of differentiable maps and the singularities of holomorphic functions from a global point of view The volume continues with an overview of new tools in singularity theory that spring from symplectic geometry and Floer type homology theories Then it looks at the derivation of Lie algebras of isolated singularities and the three dimensional rational isolated complete intersection singularities as well as recent developments in algebraic K stability and the stable degeneration conjecture This volume also contains an interesting survey on V filtrations a theory began by Malgrange and Kashiwara that can be used to study nearby and vanishing cycle functors and introduced by Deligne Then we present a panoramic view of the Hodge toric and motivic methods in the study of Milnor fibers in singularity theory both from local and global points of view The Monodromy conjecture is also explained this is a longstanding open problem in singularity theory that lies at the crossroads of number theory algebra analysis geometry and topology This volume closes with recent

developments in the study of the algebraic complexity of optimization problems in applied algebraic geometry and algebraic statistics The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

Dynamics Reported, 2012-12-06 Dynamics Reported is a series of books dedicated to the exposition of the mathematics of dynamical systems Its aim is to make the recent research accessible to advanced students and younger researchers The series is also a medium for mathematicians to use to keep up to date with the work being done in neighboring fields The style is best described as expository but complete Thus there is an emphasis on examples and explanations but also theorems normally occur with their proofs The focus is on the analytic approach to dynamical systems emphasizing the origins of the subject in the theory of differential equations Dynamics Reported provides an excellent foundation for seminars on dynamical systems

Nonlinear Dynamical Systems and Chaos H.W. Broer, I. Hoveijn, F. Takens, S.A. van Gils, 2013-11-11 Symmetries in dynamical systems KAM theory and other perturbation theories Infinite dimensional systems Time series analysis and Numerical continuation and bifurcation analysis were the main topics of the December 1995 Dynamical Systems Conference held in Groningen in honour of Johann Bernoulli They now form the core of this work which seeks to present the state of the art in various branches of the theory of dynamical systems A number of articles have a survey character whereas others deal with recent results in current research It contains interesting material for all members of the dynamical systems community ranging from geometric and analytic aspects from a mathematical point of view to applications in various sciences

Ergodic Theory, Analysis, and Efficient Simulation of Dynamical Systems Bernold Fiedler, 2001 This book summarizes and highlights progress in Dynamical Systems achieved during six years of the German Priority Research Program Ergodic Theory Analysis and Efficient Simulation of Dynamical Systems funded by the Deutsche Forschungsgemeinschaft DFG The three fundamental topics of large time behavior dimension and measure are tackled with by a rich circle of uncompromisingly rigorous mathematical concepts The range of applied issues comprises such diverse areas as crystallization and dendrite growth the dynamo effect efficient simulation of biomolecules fluid dynamics and reacting flows mechanical problems involving friction population biology the spread of infectious diseases and quantum chaos The surveys in the book are addressed to experts and non experts in the mathematical community alike In addition they intend to convey the significance of the results for applications far into the neighboring disciplines of Science

Deformations of Surface Singularities Andras Némethi, Agnes Szilárd, 2014-01-24 The present publication contains a special collection of research and review articles on deformations of surface singularities that put together serve as an introductory survey of results and methods of the theory as well as open problems and examples The aim is to collect material that will help mathematicians already working or wishing to work in this area to deepen their insight and eliminate the technical barriers in this learning process Additionally we introduce some material which emphasizes the newly found relationship with the theory of Stein fillings and symplectic geometry This links two main theories of mathematics low

dimensional topology and algebraic geometry The theory of normal surface singularities is a distinguished part of analytic or algebraic geometry with several important results its own technical machinery and several open problems Recently several connections were established with low dimensional topology symplectic geometry and theory of Stein fillings This created an intense mathematical activity with spectacular bridges between the two areas The theory of deformation of singularities is the key object in these connections

Delay Differential Equations and Applications O. Arino, M.L. Hbid, E. Ait Dads, 2007-01-07 This book groups material that was used for the Marrakech 2002 School on Delay Differential Equations and Applications The school was held from September 9-21 2002 at the Semailia College of Sciences of the Cadi Ayyad University Marrakech Morocco 47 participants and 15 instructors originating from 21 countries attended the school Financial limitations only allowed support for part of the people from Africa and Asia who had expressed their interest in the school and had hoped to come The school was supported by grants from NATO ASI Nato advanced School the International Centre of Pure and Applied Mathematics CIMPA Nice France and Cadi Ayyad University The activity of the school consisted in courses plenary lectures 3 and communications 9 from Monday through Friday 8 30 am to 6 30 pm Courses were divided into units of 45mn duration taught by block of two units with a short 5mn break between two units within a block and a 25mn break between two blocks The school was intended for mathematicians willing to acquire some familiarity with delay differential equations or enhance their knowledge on this subject The aim was indeed to extend the basic set of knowledge including ordinary differential equations and semilinear evolution equations such as for example the diffusion reaction equations arising in morphogenesis or the Belousov Zhabotinsky chemical reaction and the classic approach for the resolution of these equations by perturbation to equations having in addition terms involving past values of the solution
