Rattan, 2003-09-30 After decades of systematic collection of data describing age related changes in organisms organs tissues cells and macromolecules biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches While not giving serious consideration to the claims made by charlatans it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age related diseases for regaining the functional abilities and for prolonging the lifespan of experimental organisms This book provides the most up to date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants vitamins and hormones genetic engineering life style alterations and hormesis through mild stress The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence **The Science of Stress Management** Amitava Dasgupta, 2018-04-12 Stress is an inevitable part of everyday life Sometimes we manage it well Other times not so much But understanding the role of stress in our overall health and wellness is essential to taking it head on It's not just that stress can take over our thoughts it can take over our bodies From the flight or fight response to inflammation from feeling anxious to feeling sick it can deteriorate our bodies and our minds from the inside out While many books promise tips on managing stress this book takes it one step further to consider the science behind stress and how it affects our minds and bodies

Evolution of Longevity in Animals Avril Woodhead, 2013-03-07 The analysis of intra group correlations between LS and BW at representative intervals yields no consistent support for the hypothesis that lower BW is associated with longer LS Indeed among male Wistar rats and C57BL 6J and A J mice followed since weaning on AL diets the data suggested that relatively higher BW across the adult LS was generally associated with longer life Even when the diet was restricted by EOD

or RES regimens this pattern of positive correlations between LS and BW persisted for the C57BL 6J and A J strains when relative ages were analyzed However when BW at absolute ages were correlated with LS support for the positive relationship between BW and LS was not as forthcoming When AL groups were assessed beginning at later ages 10 months the pattern of positive correlations was very evident for the Wistar rats heavier rats tended to live longer This pattern was also evident among AL fed C57BL 6J mice followed since 6 months but was lost in the 10 month group in this strain Among A J mice on AL diets the pattern became somewhat negative when followed at 6 and 10 months of age However among both C57BL 6J and A J mice placed on EOD diets at 6 and 10 months of age the pattern clearly tended toward the positive
