Neurons communicate with other cells at a synapse, the site of a narrow irregular protrusion. The space between the presynaptic, or sending, neurone and the postsynaptic, or receiving, cell is called the synaptic cleft. An impulse arrives at the tip of the axon, the terminal button, where 'messengers' (molecules called neurotransmitters) are highly concentrated. These diffuse across the synaptic cleft to meet the postsynaptic neurone and the terminal buttons of cells, either initiating or activating neural impulses in the second cell.
