, *Artificial Intelligence in Education* R. Luckin, K.R. Koedinger, J. Greer, 2007-06-29 The nature of technology has changed since Artificial Intelligence in Education AIED was conceptualised as a research community and Interactive Learning Environments were initially developed Technology is smaller more mobile networked pervasive and often ubiquitous as well as being provided by the standard desktop PC This creates the potential for technology supported learning wherever and whenever learners need and want it However in order to take advantage of this potential for greater flexibility we need to understand and model learners and the contexts with which they interact in a manner that enables us to design deploy and evaluate technology to most effectively support learning across multiple locations subjects and times The AIED community has much to contribute to this endeavour This publication contains papers posters and tutorials from the 2007 Artificial Intelligence in Education conference in Los Angeles CA USA

*Principles and Practice of Constraint Programming - CP98* Michael Maher, Jean-Francois Puget, 2003-05-20 Constraints have emerged as the

basis of a representational and computational paradigm that draws from many disciplines and can be brought to bear on many problem domains This volume contains papers dealing with all aspects of computing with constraints In particular there are several papers on applications of constraints reflecting the practical usefulness of constraint programming The papers were presented at the 1998 International Conference on Principles and Practice of Constraint Programming CP 98 held in Pisa Italy 26-30 October 1998 It is the fourth in this series of conferences following conferences in Cassis France Cambridge USA and Schloss Hagenberg Austria We received 115 high quality submissions In addition 7 abstracts submissions were not followed by a full paper hence were not counted as submissions The program committee selected 29 high quality papers after thorough refereeing by at least 3 experts and further discussion by committee members We thank the referees and the program committee for the time and effort spent in reviewing the papers The program committee invited three speakers Joxan Jaffar Peter Jeavons Patrick Prosser Their papers are in this volume

### **Introduction to Stochastic Dynamic**

**Programming** Sheldon M. Ross, 2014-07-10 Introduction to Stochastic Dynamic Programming presents the basic theory and examines the scope of applications of stochastic dynamic programming The book begins with a chapter on various finite stage models illustrating the wide range of applications of stochastic dynamic programming Subsequent chapters study infinite stage models discounting future returns minimizing nonnegative costs maximizing nonnegative returns and maximizing the long run average return Each of these chapters first considers whether an optimal policy need exist providing counterexamples where appropriate and then presents methods for obtaining such policies when they do In addition general areas of application are presented The final two chapters are concerned with more specialized models These include stochastic scheduling models and a type of process known as a multiproject bandit The mathematical prerequisites for this text are relatively few No prior knowledge of dynamic programming is assumed and only a moderate familiarity with probability including the use of conditional expectation is necessary

### **Specification and**

**Compositional Verification of Real-Time Systems** Jozef Hooman, 1991-11-27 The research described in this monograph concerns the formal specification and compositional verification of real time systems A real time programming language is considered in which concurrent processes communicate by synchronous message passing along unidirectional channels To specify functional and timing properties of programs two formalisms are investigated one using a real time version of temporal logic called Metric Temporal Logic and another which is based on extended Hoare triples Metric Temporal Logic provides a concise notation to express timing properties and to axiomatize the programming language whereas Hoare style

formulae are especially convenient for the verification of sequential constructs For both approaches a compositional proof system has been formulated to verify that a program satisfies a specification To deduce timing properties of programs first maximal parallelism is assumed modeling the situation in which each process has its own processor Next this model is generalized to multiprogramming where several processes may share a processor and scheduling is based on priorities The proof systems are shown to be sound and relatively complete with respect to a denotational semantics of the programming language The theory is illustrated by an example of a watchdog timer

*Scientific Computing - An Introduction using Maple and MATLAB* Walter Gander, Martin J. Gander, Felix Kwok, 2014-04-23 Scientific computing is the study of how to use computers effectively to solve problems that arise from the mathematical modeling of phenomena in science and engineering It is based on mathematics numerical and symbolic algebraic computations and visualization This book serves as an introduction to both the theory and practice of scientific computing with each chapter presenting the basic algorithms that serve as the workhorses of many scientific codes we explain both the theory behind these algorithms and how they must be implemented in order to work reliably in finite precision arithmetic The book includes many programs written in Matlab and Maple Maple is often used to derive numerical algorithms whereas Matlab is used to implement them The theory is developed in such a way that students can learn by themselves as they work through the text Each chapter contains numerous examples and problems to help readers understand the material hands on

Introduction to Intelligent Simulation: The RAO Language Abdelhakim Artiba, V.V. Emelyanov, S.I. Iassinovski, 2012-12-06 Introduction to Intelligent Simulation of Complex Discrete Systems and Processes RAO Language focuses on a unique approach in modeling and simulation of complex systems In this volume are considered features of complex systems and processes their mathematical description and modeling Theoretical foundations of the RAO Resource Action Operation language as well as its syntax and utilisation are given Examples of simulation models of different complexity levels related to different fields are also presented The RAO intelligent modeling system introduced and described in Introduction to Intelligent Simulation of Complex Discrete Systems and Processes is unique because 1 it makes simulation modeling universal for the classes of systems and processes modeled 2 it is simple to modify the models and 3 it has the capacity to model complex control systems together with the object controlled including simulation modeling for on line control The RAO tool allows the user to use a language very similar to his professional language and rids him of intermediary supplementary description of the system modeled In fifteen chapters this volume provides an overview of general modeling trends and hence serves the research community in guiding their modeling methods intelligent simulation modeling is introduced to solve complex systems and processes

**Programming Languages and Systems** S. Doaitse Swierstra, 1999-03-10 This is the second time that of ESOP has formed part of the ETAPS cluster of conferences workshops working group meetings and other associated activities One of the results of collocating so many conferences is a reduction in the number of possibilities to submit a paper to a European

conference and the increased competition between conferences that occurs when boundaries between individual conferences have not yet become well established. This may have been the reason for the fact that only 44 submissions were received this year. On the other hand, we feel that the average quality of submissions has gone up and thus the program committee was able to select 18 good papers, only one less than the year before. The program committee did not meet physically and all discussion was done using a Web-driven database system. Despite some mixed feelings, there is an overall tendency to appreciate the extra time available for giving papers a second look and really going into comments made by other program committee members. I want to thank my fellow program committee members for the work they have put into the refereeing process and the valuable feedback they have given to authors. I want to thank the referees for their work and many detailed comments and finally I want to thank everyone who has submitted a paper without authors' notice. **A**

**25-Year Perspective on Logic Programming** Agostino Dovier, Enrico Pontelli, 2010-06-26 This book celebrates the 25th anniversary of GULP, the Italian Association for Logic Programming. Authored by Italian researchers at the leading edge of their fields, it presents an up-to-date survey of a broad collection of topics in logic programming, making it a useful reference for both researchers and students. During its 25-year existence, GULP has organised a wide range of national and international activities, including both conferences and summer schools. It has been especially active in supporting and encouraging young researchers by providing scholarships for GULP events and awarding distinguished dissertations.

We, in the international logic programming community, look upon GULP with a combination of envy, admiration, and gratitude. We are pleased to attend its conferences and summer schools where we can learn about scientific advances, catch up with old friends, and meet young students. It is an honour for me to acknowledge our appreciation to GULP for its outstanding contributions to our field and to express our best wishes for its continuing prosperity in the future. March 2010 Robert Kowalski, Imperial College London. Preface. On June 18, 1985, a group of pioneering researchers, including representatives from industry, national research labs, and academia, attended the constituent assembly of the Group of researchers and Users of Logic Programming (GULP) association. That was the starting point of a long adventure in science that, 25 years later, we are still experiencing. This volume celebrates this important event. **Automata, Languages and Programming** Juraj Wiedermann, 1999

This book constitutes the refereed proceedings of the 26th International Colloquium on Automata, Languages, and Programming (ICALP 99) held in Prague, Czech Republic, in July 1999. The 56 revised full papers presented were carefully reviewed and selected from a total of 126 submissions; also included are 11 invited contributions. Among the topics addressed are approximation algorithms, algebra, and circuits, concurrency, semantics, and rewriting process algebras, graphs, distributed computing, logic of programs, sorting, and searching, automata, nonstandard computing, regular languages, combinatorial optimization, automata, and logics, string algorithms, and applied logics. **Higher Education Computer Science** Jenny Carter, Michael O'Grady, Clive Rosen, 2023-05-29

The march towards online and blended teaching presented before the Covid

19 pandemic has been accelerated by it and there is no going back. Students and staff may object but the economic drive towards greater productivity will inevitably result in less face to face f2f instruction. Therefore it is incumbent for those delivering this precious in person resource to make maximum use of time which raises the question how. The second edition of Higher Education Computer Science offers some potential answers. It also addresses other questions such as why have f2f teaching at all, what is the purpose of f2f and what is the appropriate balance between the two. The first edition began to offer suggestions for optimising limited opportunities to get together with students. Aligned with that this unique new volume examines how to use the technology available to maximum advantage. For example resources such as Moocs and other on line instructional materials can provide invaluable pedagogic support. In addition the book addresses problem based learning using robotics in the teaching of programming and a multidisciplinary approach to data science. Although it includes a chapter on distance learning there is greater emphasis placed on the soft transferable skills and employability skills that are best delivered in person. Further the work provides several examples of putting theory into practice when teaching computer science at both undergraduate and postgraduate levels. Written by experienced practitioners each chapter tackles a particular teaching activity or topic within computing presented in such a way that other practitioners can use. As such this new volume will be an invaluable resource to those who want to protect and optimise in person teaching.
