Studies In Energy Tax Policy:

Studies in Energy Tax Policy Gerard Marion Brannon,1975 A Review of the Department of Energy's Energy Tax Policy Analysis United States. General Accounting Office,1979 **Studies in energy tax policy** Gerard M. Brannon,1975

Interrelationship Between U.S. Tax Policy and U.S. Tax Energy Policy United States. Congress. House. Committee on Government Operations. Commerce, Consumer, and Monetary Affairs Subcommittee,1979 **Energy Abstracts for Policy Analysis** ,1986 **OECD Tax Policy Studies Housing Taxation in OECD Countries** OECD,2022-07-21 Housing

Taxation in OECD Countries provides a comparative assessment of housing tax policies in OECD countries and identifies options for reform The study starts with an overview of recent housing market trends and challenges and an analysis of the distribution of housing assets **US Energy Tax Policy** Gilbert E. Metcalf,2010-12-06 The United States face enormous challenges in the energy area Climate change biofuels policy energy security and environmental degradation are all intimately bound up with energy production and consumption Historically the federal government has relied on tax subsidies to effect energy policy With mounting federal deficits policymakers and advocates are increasingly calling for a rethinking of our energy tax policy How can the federal tax code strengthen environmental policy and reduce security concerns in the area of energy The authors tackle such difficult problems as climate change efficient taxation of oil and gas and optimal oil tax policy in a world with OPEC oil producers dominating world oil supply This volume presents a number of innovative policy suggestions backed by sophisticated and cutting edge research carried out by leading scholars in the area of energy taxation

Taxation and National Energy Policy United States. Congress. House. Committee on Ways and Means,Donald H. K. Farness,1976 **Effects of U.S. Tax Policy on Greenhouse Gas Emissions** National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on the Effects of Provisions in the Internal Revenue Code on Greenhouse Gas Emissions,2013-06-20 The U S Congress charged the National Academies with conducting a review of the Internal Revenue Code to identify the types of and specific tax provisions that have the largest effects on carbon and other greenhouse gas emissions and to estimate the magnitude of those effects To address such a broad charge the National Academies appointed a committee composed of experts in tax policy energy and environmental modeling economics environmental law climate science and related areas For scientific background to produce *Effects of U S Tax Policy on Greenhouse Gas Emissions* the committee relied on the earlier findings and studies by the National Academies the U S government and other research organizations The committee has relied on earlier reports and studies to set the boundaries of the economic environmental and regulatory assumptions for the present study The major economic and environmental assumptions are those developed by the U S Energy Information Administration EIA in its annual reports and modeling Additionally the committee has relied upon publicly available data provided by the U S Environmental Protection Agency which inventories greenhouse gas GHG emissions from different sources in the United States The tax system affects

emissions primarily through changes in the prices of inputs and outputs of goods and services. Most of the tax provisions considered in this report relate directly to the production or consumption of different energy sources. However, there is a substantial set of tax expenditures called broad-based that favor certain categories of consumption among them: employer-provided health care, owner-occupied housing, and purchase of new plants and equipment. Effects of U.S. Tax Policy on Greenhouse Gas Emissions examines both tax expenditures and excise taxes that could have a significant impact on GHG emissions.

Energy Tax and Regulatory Policy in Europe Ian Parry, Karen Pittel, Herman Vollebergh, 2017-08-11. Concise introductions to the main issues in energy policy and their interaction with environmental policies in the EU. The European Union (EU) faces critical challenges in energy policy, making the most pressing of which are how to achieve the deep greenhouse gas reductions promised at the December 2015 UN Conference of the Parties in Paris and how this effort can be coordinated with already existing policies. Energy policy is primarily a member state responsibility and policy makers need an overarching view of the main issues in energy policy and their interaction with environmental policies. This volume aims to fill this need, offering concise introductions to some of the major issues as well as practical suggestions for policy making. The contributors discuss reforms to the EU Emissions Trading System (ETS), the world's largest carbon market; ways to improve the operation and integration of the EU's power grids in terms of both supply and demand; changes to the EU's Energy Tax Directive which sets tax floors for fuels outside the ETS; the coordination of climate policies with policies to promote renewables and energy efficiency; research into clean technology; challenges to shale gas development and transportation policy; and the need for action on such externalities as traffic congestion. Finally, contributors consider obstacles to reform, including its potential effects on vulnerable households and energy-intensive industries.
