Studies in Mathematical Physics Research Charles V. Benton, 2004 Physics and mathematics have always been closely intertwined with developments in one field frequently inspiring the other Currently there are many unsolved problems in physics which will likely require new innovations in mathematical physics Mathematical physics is concerned with problems in statistical mechanics atomic and molecular physics quantum field theory and in general with the mathematical foundations of theoretical physics This includes such subjects as scattering theory for n bodies quantum mechanics both nonrelativistic and relativistic atomic and molecular physics the existence and properties of the phases of model ferromagnets the stability of matter the theory of symmetry and symmetry breaking in quantum field theory both in general and in concrete models and mathematical developments in functional analysis and algebra to which such subjects lead This book presents leading edge research in this fast moving field

Studies in Mathematical Physics P. Barut, 2011-11-25 Mathematical physics has become in recent years an independent and important branch of science It is being increasingly recognized that a better knowledge and a more effective channeling of modern mathematics is of great value in solving the

problems of pure and applied sciences and in recognizing the general unifying principles in science Conversely mathematical developments are greatly influenced by new physical concepts and ideas In the last century there were very close links between mathematics and theoretical physics It must be taken as an encouraging sign that today after a long communication gap mathematicians and physicists have common interests and can talk to each other There is an unmistakable trend of rapprochement when both groups turn towards the common source of their science Nature To this end the meetings and conferences addressed to mathematicians and physicists and the publication of the studies collected in this Volume are based on lectures presented at the NATO Advanced Study Institute on Mathematical Physics held in Istanbul in August 1970 They contain review papers and didactic material as well as original results Some of the studies will be helpful for physicists to learn the language and methods of modern mathematical analysis others for mathematicians to learn physics All subjects are among the most interesting research areas of mathematical physics
