Approximation and Computation: A Festschrift in Honor of Walter Gautschi R.V.M. Zahar, 2012-12-06 R V M Zahar The sixty fifth birthday of Walter Gautschi provided an opportune moment for an international symposium in his honor to recognize his many contributions to mathematics and computer sciences Conceived by John Rice and sponsored by Purdue University the conference took place in West Lafayette from December 2 to 5 1993 and was organized around the four main themes representing Professor Gautschi's principal research interests Approximation Orthogonal Polynomials Quadrature and Special Functions Thirty eight speakers colleagues co authors research collaborators or doctoral students of Professor Gautschi were invited to present articles at the conference their lectures providing an approximately equal representation of the four disciplines Five invited speakers Germund Dahlquist Philip Davis Luigi Gatteschi Werner Rheinboldt and Stephan Ruscheweyh were unable to present their talks because of illness or other commitments although Professors Dahlquist Gatteschi and Ruscheweyh subsequently contributed articles to these proceedings Thus the final program contained thirty three technical lectures ten of which were plenary sessions Approximately eighty scientists attended the conference and for some sessions in particular Walter's presentation of his entertaining and informative Reflections and Recollections that number was complemented by many visitors and friends as well as the family of the honoree A surprise visit by Paul Erdos provided one of the highlights of the conference week The ambiance at the symposium was extremely collegial due no doubt

to the common academic interests and the personal friendships shared by the participants Approximation Theory Eight C. K. Chui, Larry L. Schumaker, 1995 This is the collection of the refereed and edited papers presented at the 8th Texas International Conference on Approximation Theory It is interdisciplinary in nature and consists of two volumes The central theme of Vol I is the core of approximation theory It includes such important areas as qualitative approximations interpolation theory rational approximations radial basis functions and splines The second volume focuses on topics related to wavelet analysis including multiresolution and multi level approximation subdivision schemes in CAGD and applications

Solving Problems in Scientific Computing Using Maple and MATLAB® Walter Gander, Jiri Hrebicek, 2012-12-06 From the reviews An excellent reference on undergraduate mathematical computing American Mathematical Monthly manuals for such systems Maple and MATLAB tend to use trivial examples making it difficult for new users of such systems to quickly apply their power to real problems The authors have written a good book to address this need the book is worth buying if you want guidance in applying Maple and MATLAB to problems in the workplace Computing Reviews The presentation is unique and extremely interesting I was thrilled to read this text and to learn the powerful problem solving skills presented by these authors I recommend the text highly as a learning experience not only to engineering students but also to anyone interested in computation Mathematics of Computation Handbook of Semidefinite Programming Henry Wolkowicz, Romesh Saigal, Lieven Vandenbergh, 2012-12-06 Semidefinite programming SDP is one of the most exciting and active research areas in optimization It has and continues to attract researchers with very diverse backgrounds including experts in convex programming linear algebra numerical optimization combinatorial optimization control theory and statistics This tremendous research activity has been prompted by the discovery of important applications in combinatorial optimization and control theory the development of efficient interior point algorithms for solving SDP problems and the depth and elegance of the underlying optimization theory The Handbook of Semidefinite Programming offers an advanced and broad overview of the current state of the field It contains nineteen chapters written by the leading experts on the subject The chapters are organized in three parts Theory Algorithms and Applications and Extensions *Mixed Integer Nonlinear Programming* Jon Lee, Sven Leyffer, 2011-12-02 Many engineering operations and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal solutions Mixed integer nonlinear programming MINLP problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables MINLP is one of the most flexible modeling paradigms available for optimization but because its scope is so broad in the most general cases it is hopelessly intractable Nonetheless an expanding body of researchers and practitioners including chemical engineers operations researchers industrial engineers mechanical engineers economists statisticians computer scientists operations managers and mathematical programmers are interested
