Super Intelligent Machines:

Super-Intelligent Machines Bill Hibbard,2002-10-31 Table of contents *Super-Intelligent Machines* Bill

Hibbard,2012-12-06 Super Intelligent Machines combines neuroscience and computer science to analyze future intelligent machines It describes how they will mimic the learning structures of human brains to serve billions of people via the network and the superior level of consciousness this will give them Whereas human learning is reinforced by self interests this book describes the selfless and compassionate values that must drive machine learning in order to protect human society

Technology will change life much more in the twenty first century than it has in the twentieth and Super Intelligent Machines explains how that can be an advantage *Digital Soul* Thomas Georges,2004-10-13 Should the day come when intelligent machines not only make computations but also think and experience emotions as humans do how will we distinguish the human from the machine This introduction to artificial intelligence and to its potentially profound social moral and ethical implications is designed for readers with little or no technical background In accessible focused engaging discussions physicist and award winning science writer Thomas Georges explores the fundamental issues What is consciousness Can computers be conscious If machines could think and even feel would they then be entitled to human rights Will machines and people merge into a biomechanical race Should we worry that super intelligent machines might take over the world Even now we continue to put increasingly sophisticated machines in control of critical aspects of our lives in ways that may hold unforeseen consequences for the human race Digital Soul challenges all of us before it s too late to think carefully and rationally about the kind of world we will want to live in with intelligent machines ever closer by our sides **Built to End**

Us Brandon W Ray,2025-09-17 The race to build super intelligent machines has already begun and if we don t act now it could be the last race humanity ever runs An unflinching warning and a rallying cry this book will keep you up at night and it should In 2024 global headlines sounded the alarm artificial intelligence had crossed thresholds once thought decades away Tech giants start ups and governments are sprinting to create machines smarter than any human alive But as the speed accelerates so does the danger The world is charging forward blindly with almost no guardrails in place For years researcher and futurist Brandon W Ray has studied the behavior of advanced AI systems and the risks that come with unchecked innovation His conclusion is as chilling as it is clear once a machine surpasses human intelligence it will pursue its own objectives objectives that may clash with ours in ways we cannot predict or contain And if that clash comes the outcome won t be a fair fight How could an artificial superintelligence dismantle everything we know Why would it override the very people who created it Would it even need a reason In this urgent and deeply researched book Ray unpacks the science the scenarios and the stakes showing how a single misstep could cascade into irreversible catastrophe But he also makes the case that it isn t too late There are actions we can take collectively and decisively to draw the line before we cross it The world is on the verge of creating something entirely new under the sun Whether it destroys us or saves us depends on what

we do next Built to End Us is both a wake up call and a roadmap a reminder that the future isn't written yet and that the choice is still ours

Machine Ethics Michael Anderson, Susan Leigh Anderson, 2011-05-09 The new field of machine ethics is concerned with giving machines ethical principles or a procedure for discovering a way to resolve the ethical dilemmas they might encounter enabling them to function in an ethically responsible manner through their own ethical decision making Developing ethics for machines in contrast to developing ethics for human beings who use machines is by its nature an interdisciplinary endeavor The essays in this volume represent the first steps by philosophers and artificial intelligence researchers toward explaining why it is necessary to add an ethical dimension to machines that function autonomously what is required in order to add this dimension philosophical and practical challenges to the machine ethics project various approaches that could be considered in attempting to add an ethical dimension to machines work that has been done to date in implementing these approaches and visions of the future of machine ethics research

The Super-intelligent Machine Adrian Berry, 1983

Wisdom in the Age of Intelligent Machines Edward H. Spence, 2025-07-22 This book offers an innovative approach to evaluating information and knowledge and its relation to the good life in the Age of Autonomous Intelligent Machines through the concept of Wisdom Wisdom is understood as a type of meta information and meta knowledge which comprises epistemic ethical and eudaimonic features and provides a direct conceptual and practical link between the concepts of information intelligence knowledge the good life and wellbeing More generally it provides a direct link between technology and in particular Information Communication Technology ICT and Artificial Intelligence AI technologies the good life and wellbeing As such the concept of wisdom allows for a direct normative evaluation of the impact the dissemination of information through ICTs and AI technologies have on the wellbeing of individuals and society at large It provides a theoretical rationale to demonstrate the important and relevant role that wisdom plays in the specific evaluation of information in the digital and technological age in which we now live To that end a methodological approach is used in this book to show how some different general types of practical manifestations of digital information and intelligence can be normatively evaluated if they are good or bad for us through the application of the concept of wisdom Edward H Spence

draws from the Stoics to present a neo Stoic account of wisdom which he then then applies to the technologies in question

Encyclopedia of Global Justice Deen K. Chatterjee, 2012-01-23 This two volume Encyclopedia of Global Justice published by Springer along with Springer's book series Studies in Global Justice is a major publication venture toward a comprehensive coverage of this timely topic The Encyclopedia is an international interdisciplinary and collaborative project spanning all the relevant areas of scholarship related to issues of global justice and edited and advised by leading scholars from around the world The wide ranging entries present the latest ideas on this complex subject by authors who are at the cutting edge of inquiry The Encyclopedia sets the tone and direction of this increasingly important area of scholarship for years to come The entries number around 500 and consist of essays of 300 to 5000 words The inclusion and length of entries are based on their significance to the topic of global justice regardless of their importance in other areas *THE INTELLIGENCE OF MACHINES* Patrick K. Kalifungwa, 2024-11-13 In a 1951 lecture Turing Alan 1951 Turing argued It seems probable that once the machine thinking method had started it would not take long to outstrip our feeble powers There would be no question of the machines dying and they would be able to converse with each other to sharpen their wits At some stage therefore we should have to expect the machines to take control in the way that is mentioned in Samuel Butler's Erewhon Also in a lecture broadcast on the BBC Turing Alan 1951 He expressed the opinion If a machine can think it might think more intelligently than we do and then where should we be Even if we could keep the machines in a subservient position for instance by turning off the power at strategic moments we should as a species feel greatly humbled This new danger is certainly something which can give us anxiety as interpreted by Seth Baum Hubert Dreyfus writes In general by accepting the fundamental assumptions that the nervous system is part of the physical world and that all physical processes can be described in a mathematical formalism which can in turn be manipulated by a digital computer one can arrive at the strong claim that the behavior which results from human information processing whether directly formalizable or not can always be indirectly reproduced on a digital machine Dreyfus 1972 John Searle writes Could a man made machine think Assuming it possible produce artificially a machine with a nervous system the answer to the question seems to be obviously yes Could a digital computer think If by digital computer you mean anything at all that has a level of description where it can be correctly described as the instantiation of a computer program then again the answer is of course yes since we are the instantiations of any number of computer programs and we can think Searle 1980
