Superfamily Of Ras Related Genes:

The Superfamily of ras-Related Genes Demetrios A. Spandidos, 2013-03-08 since the earliest results on the linkage between ras activation and cell transformation appeared a vast amount of additional information has been generated which emphasizes the importance of ras related genes in membrane trafficking cell proliferation differentiation and cancer These advances led to the development of new strategies for the diagnosis prognosis and prevention of cancer Ras related genes appear to be central to the mechanism of transformation by other oncogenes and therefore constitute a focal point upon which attempts to intervene in the process of carcinogenesis will be concentrated The present volume contains the contributions to the NATO Advanced Research Workshop on the The Superfamily of ras Related Genes held in Agia Pelagia Heraklion Crete Greece May 1991 At this meeting the leading researchers in this field came together to discuss the most recent progress in analysis of biological function of the ras related genes As an organizer I feel that the Workshop was a success and would like to thank all the participants and the contributors to this volume I thank the NATO Scientific Affairs Division Brussels the Greek Ministry of Industry Energy and Technology the International Center for Cancer Research the National Hellenic Research Foundation and the Medical School University of Crete for sponsoring the Meeting The ras Superfamily of GTPases (1993) Juan Carlos Lacal, Frank Patrick McCormick, 2017-11-22 The ras Superfamily of GTPases presents the most comprehensive compilation of information available regarding aspects of the putative function of small ras related GTPases The book's chapters were written by the world's most prominent scientists in this field and cover such topics as the structure and properties of ras proteins ras function the ras superfamily in general and the functional regulation of ras and ras related GTPases The book will benefit cell biologists oncologists neurobiologists molecular biologists and others interested in the topic **Handbook of Growth Factors (1994)** Enrique Pimentel, 2017-11-22 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail *Fusion of Biological Membranes and Related Problems* Herwig J. Hilderson, Stephen Fuller, 2005-11-19 Membrane fusion and targeting processes are tightly regulated and coordinated Dozens of proteins originating from both the cytoplasm and membranes are involved The discovery of homologous proteins from yeast to neurons validates a unified view Although much is known about the interfering proteins the events occurring when two lipid bilayers actually fuse are less clear It should be remembered that lipid bilayers behave like soap bubbles fusing when meeting each other In this respect interfering proteins should be considered as preventing undesirable and unnecessary fusion and eventually directing the biological membrane fusion process when where how and overcoming the activation energy In this latest volume in the renowned Subcellular Biochemistry series some aspects of fusion of biological

membranes as well as related problems are presented Although not complete there is a lot of recent information including on virus induced membrane fusion The contributors of the chapters are all among the researchers who performed many of the pioneering studies in the field

Handbook of Growth Factors Enrique Pimentel,1994-06-02 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail

Molecular Biology of the Fission Yeast ,2012-12-02 This highly researched yeast which represents a system used by cell biologists geneticists and molecular biologists has been given only minimal coverage in the literature Its properties make it an excellent organism for DNA and related biotechnology research This book which is the first attempt to collate existing information in one source will be an invaluable aid to those initiating projects with this organism

Journal of the National Cancer Institute ,1990

Selective Neurotoxicity Hans Herken,Ferdinand Hucho,2012-12-06 Following the overwhelmingly successful response to the first printing in hardcover the hottest topics in Selective Neurotoxicity are now available in this special softcover edition Researchers are provided with well grounded information on the cellular and subcellular targets of neurotoxins and their mode of action at the level of ion channels receptors and neurotransmitters The use of bacterial toxins as a tool in neuroscientific research is an important aspect in this context The chapters that interest clinicians as well deal with protective barriers in the peripheral and central nervous system and metabolic disorders that cause neurotoxins to be built up in the human body The induction of tumors by neurotropic carcinogens is included

Regulators and Effectors of Small GTPases: Ras Family ,2006-06-07 The Ras superfamily 150 human members encompasses Ras GTPases involved in cell proliferation Rho GTPases involved in regulating the cytoskeleton Rab GTPases involved in membrane targeting fusion and a group of GTPases including Sar1 Arf Arl and dynamin involved in vesicle budding fission These GTPases act as molecular switches and their activities are controlled by a large number of regulatory molecules that affect either GTP loading guanine nucleotide exchange factors or GEFs or GTP hydrolysis GTPase activating proteins or GAPs In their active state they interact with a continually increasing functionally complex array of downstream effectors Since the last Methods in Enzymology volume on this topic in 2000 the study of Ras Family GTPases has witnessed a plethora of new directions and trends With regards to the founding member of the Ras superfamily the study of Ras in oncogenesis has seen the development and application of more advanced model cell culture and animal systems The discovery of mutationally activated B Raf in human cancers has injected renewed interest in this classical effector pathway of Ras Includes a database for Ras family proteins and their effectors and regulators Complimentary to volume 406 coverage of the Rho family Over 150 international contributors

Oncogene and Transgenics Correlates of Cancer Risk Assessments Constantine Zervos,2012-12-06 The data the information and even

the overarching knowledge necessary for risk assessments of economically important environmental carcinogens come for the most part from the applied biological disciplines e g toxicology epidemiology biostatistics etc The more fundamental biological disciplines e g biochemistry cell biology molecular biology molecular genetics of cancer etc have enormous but unrealized potential to improve current cancer risk assessment methods The objective of this advanced research workshop ARW was to advance the state of the art of cancer risk assessment methods by identifying potential short and long term contributions to such methods from the more fundamental disciplines Attention was paid to short and long term contributions from research advances in the biochemistry and physiology of oncogenes oncogenes research and in the construction and utilization of transgenic animals transgenics research In the last 20 years researchers in the fundamental biological disciplines i e biochemists geneticists molecular and cell biologists etc have inter alia advanced spectacularly our understanding of the nature of neoplastic diseases Their phenomenal progress is the combined result of both advances and refinements of the techniques available to them and of new fundamental discoveries Among the latter the most significant are the discoveries of oncogenes and of the feasibility of creating transgenic animals i e of transferring well defined and expressible genes from the cells of one species of organisms to the embryonic cells of another
