Medical Books and Serials in Print, 1983 *The Practice of Cardiology* Robert Arnold Johnson, Edgar Haber, William Gerald Austen, 1980 *Benign Lesions of the Esophagus and Cancer* Robert Giuli, Richard W. McCallum, 2013-11-11 In an attempt to attain the best possible delimitation of all the problems posed today by benign diseases of the esophagus 181 authors each agreed to answer one or more of 210 questions that had been drawn up on the subject These questions each one deliberately limited and difficult mostly concerned reflux esophagitis its natural history the means of its diagnosis all existing treatments and its eventual degeneration The authors approached are today s most reputed specialists in the fields of epidemiology gastroenterology endoscopy pathology and surgery of esophageal diseases The authors were all assigned one or more questions in their own field none of which was simple all did their best to synthesize in their replies their own experience on the precise point under review and included all the most useful bibliographical references on the topic The book is thus the result of an original individual approach to try to pinpoint the heart of a problem The 210 answers succeed one another in logical progression according to the different diagnostic and therapeutic stages specifying at each step the degree of precision sought Consequently the reader has at his disposal an exceptional synthesis of facts and concepts Opening the book at random he will find at once the detail he is looking for the professional opinion he is lacking or the development of a question he had perhaps not yet asked himself **Frontiers in General Surgery** D.W. Jirsch, 2012-12-06 Recent developments have favourably and extensively altered general surgical practice As editor I have happily been able to select certain topics of new and major interest for detailed discussion and have thus had the opportunity to collect these authoritative submissions within the covers of one text The range of topics is broad Endoscopy has changed the nature of both investigation and treatment of much gastrointestinal disease and the therapeutic uses of endoscopy continue to grow That sophisticated new tool of the radiologist computerized axial tomography has revolutionized the diagnosis of intra abdominal disease very often permitting precise localization of hitherto occult disease and as might be expected it has become helpful in determining both the nature and extent of surgical and other therapy Although an invasive procedure intra abdominal angiography has similarly come of age as a means of localizing gastrointestinal haemorrhage and controlling such bleeding Unfortunately intra abdominal malignancy continues to be a major source of concern to the general surgeon and the discovery that such tumours are associated with unusual markers termed oncofetal antigens suggests that early diagnosis and early detection of recurrence may yet be feasible Adjuvant or post surgical therapy is an exciting development in terms of prolonging the disease free interval in women with breast cancer limited to regional lymph nodes Equally efficacious therapy is not yet available for patients with gastrointestinal cancer highlighting the need for more specific drugs and drug combinations Handbook of Cryosurgery Richard J.
