Remi Yergeau, 2018-01-05 In *Authoring Autism* M Remi Yergeau defines neurodivergence as an identity neuroqueerness rather than an impairment Using a queer theory framework Yergeau notes the stereotypes that deny autistic people their humanity and the chance to define themselves while also challenging cognitive studies scholarship and its reification of the neurological passivity of autistics They also critique early intensive behavioral interventions which have much in common with gay conversion therapy and questions the ableist privileging of intentionality and diplomacy in rhetorical traditions Using storying as their method they present an alternative view of autistic rhetoricity by foregrounding the cunning rhetorical abilities of autistics and by framing autism as a narrative condition wherein autistics are the best equipped people to define their experience Contending that autism represents a queer way of being that simultaneously embraces and rejects the rhetorical Yergeau shows how autistic people queer the lines of rhetoric humanity and agency In so doing they demonstrate how an autistic rhetoric requires the reconceptualization of rhetoric's very essence **Handbook of Early**

symptoms of autism *Mental Health Interventions with Preschool Children* Robert D. Lyman, Toni L.

Hembree-Kigin, 2013-11-11 Preschool children have been largely neglected in the mental health treatment literature although research has established that many behavioral and emotional disorders in children result from events occurring during the preschool years or are first manifested during this period This has occurred for several reasons Traditional psychoanalytic thinking has considered preschoolers to be too psychologically immature for complete manifestations of psychopathology and the limited language abilities of young children have complicated assessment procedures and made them less appropriate for treatment approaches that are largely verbal in nature In addition the developmental complexity of the preschool period has deterred many researchers from investigating clinical issues with this age group Partly as a result of the lack of information on preschoolers in the literature practitioners have historically been uncomfortable in conducting assessments and initiating treatment with young children They have often adopted a wait and see attitude in which formal mental health diagnosis and treatment are not implemented until after the child's entry into school Unfortunately such a delay may mean wasting the time during which mental health interventions can be maximally effective Recently this attitude has changed and practitioners now recognize the need for assessment and treatment of behavioral and emotional disorders early in life What they require to assist them in the timely delivery of such services is information about assessment and treatment procedures specifically designed for preschoolers and with demonstrated efficacy with that age group **Autism Spectrum Disorders**

Winner of the History of Science Society's 2022 Davis Prize How one mother challenged the medical establishment and misconceptions about autistic children and their parents In the early 1960s Massachusetts writer and homemaker Clara Park and her husband took their 3 year old daughter Jessie to a specialist after noticing that she avoided connection with others Following the conventional wisdom of the time the psychiatrist diagnosed Jessie with autism and blamed Clara for Jessie's isolation Experts claimed Clara was the prototypical refrigerator mother a cold intellectual parent who starved her children of the natural affection they needed to develop properly Refusing to accept this Clara decided to document her daughter's

behaviors and the family's engagement with her. In 1967 she published her groundbreaking memoir challenging the refrigerator mother theory and carefully documenting Jessy's development. Clara's insights and advocacy encouraged other parents to seek education and support for their autistic children. Meanwhile Jessy would work hard to expand her mother's world and ours. Drawing on previously unexamined archival sources and firsthand interviews, science historian Marga Vicedo illuminates the story of how Clara Park and other parents fought against medical and popular attitudes toward autism while presenting a rich account of major scientific developments in the history of autism in the US. *Intelligent Love* is a fierce defense of a mother's right to love intelligently, the value of parents' firsthand knowledge about their children, and an individual's right to be valued by society.
