

# Color THEORY

Color is an ELEMENT OF ART.

Every time I use color,  
I am creating  
a color scheme.

← This is a color wheel.

The most common  
color schemes are listed below.

**PRIMARY**

{ I can make all the other colors by mixing  
different amounts of primary colors. }

**SECONDARY**

{ I can mix two primary colors to make  
a secondary color. }

**WARM**

{ Yellow and all the colors with  
red and orange tones are warm. }

**COOL**

{ Violet and all the colors with  
blue and green tones are cool. }

**COMPLEMENTARY**

Opposites on the color wheel are complementary.

**ANALOGOUS**

Colors that are close neighbors on the color wheel are analogous

**RAINBOW**

Using primary and secondary colors  
placed in order from the color wheel, I can make a rainbow

**TERTIARY**

is a color term I need to know. It is the color in between  
the primary and secondary colors on the color wheel

Redish, M. Vicentini, 2004-08-09 Physics Education research is a young field with a strong tradition in many countries. However, it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations. This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice. On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science, communication science, history and philosophy. The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments, the issue of assessment and cultural aspects. Information is also given on the organizations involved in connecting various aspects of Physics Education: the International Commission on Physics Education, the European Physical Society and the European Physics Education Network.

**The Montessori Reader** Maria Montessori, 2013-03-25 The Montessori method revolutionized how children were educated The Montessori method is characterized by an emphasis on self directed activity on the part of the child using specialized materials that are presented very precisely by the teacher It stresses the importance of adapting the child s learning environment to his or her developmental level and of the role of physical activity in absorbing abstract concepts and practical skills Collected here in this 3 in 1 omnibus edition are Maria Montessori s three most important works *The Absorbent Mind* *Dr Montessori s Own Handbook* and *The Montessori Method* *The Absorbent Mind* was Maria Montessori s most in depth work on her educational theory based on decades of scientific observation of children Her view on children and their absorbent minds was a landmark departure from the educational model at the time This book helped start a revolution in education Since this book first appeared there have been both cognitive and neurological studies that have confirmed what Maria Montessori knew decades ago In *Dr Montessori s Own Handbook* Maria Montessori explains the basic of her system how it works and why it works There are dozens of figures to help illustrate her points My method is scientific both in its substance and in its aim It makes for the attainment of a more advanced stage of progress in directions no longer only material and physiological The Montessori Method teaches reading via phonics and whole language the comparative benefits of which are currently being recognized To all educators this book should prove most interesting All who are fair minded will admit the genius that shines from the pages which follow and the remarkable suggestiveness of Dr Montessori s labors Henry W Holmes

**Teaching Physics** L. Viennot, 2011-06-28 Everywhere in the world except for the time being in some Asian countries young people are losing interest in science This disenchantment with science studies is particularly strong in the United States but has affected Europe and France especially Official statistics confirm this and I can add a telling example of my own When I began teaching physics at Grenoble University in 1960 there were some 350 students studying to be electrical engineers Today 57 students are enrolled in the Physics Maitrise programme at the Joseph Fourier University in Grenoble and 15 of them are foreign students In that time interval the total number of students enrolled in institutes of higher learning in mainland France rose from 309 700 in 1960 1961 to 2 111 100 in 2000 2001 If we look at what happened in the USA to try to avoid making the same mistakes there is indeed a strongly antiscientific trend in that society of which the Politically Correct Movement is the most extreme manifestation Yet this movement has profoundly

influenced the humanities departments of American universities and the persons responsible for training teachers There is a risk that similar negative effects will show up in France where many primary school teachers have a background in the humanities and often have no scientific culture at all c P Snow s famous pamphlet on the two cultures was published in 1959 but is still exceedingly topical and should be recommended reading in all teacher training institutes     *Local Education Order* Stephen Hester,D. W. Francis,2000-01-01 The studies in this book take an ethnomethodological approach to educational phenomena Ethnomethodology s concern is with the locally accomplished and situated character of social order With reference to educational phenomena this means that ethnomethodology investigates how the natural facts of educational life such as daily activities in school classrooms are produced as such in the first place rather than taking for granted the recognisability of these facts and then theorising their explanation In this sense ethnomethodological studies contrast markedly with other approaches to the study of education Each of the chapters in the book consists of a new and original study Collectively they exhibit the continuing vitality of this tradition and demonstrate ethnomethodology s special commitment to the analysis of educational phenomena as locally ordered and accomplished
