 Children** Benny F. Tucker,Ann H. Singleton,Terry L. Weaver,2002 With the composition of today s classroom in mind this  
 book approaches teaching and planning elementary mathematics by using methods that accommodate the diverse learning  
 needs of any student having difficulties with basic math concepts The authors use personal experience and research that  
 supports a complete set of developmental concepts and skills to outline the effective development of mathematical concepts

and skills It stresses lesson planning that will result in learning understanding and retaining important concepts and skills NCTM s Curriculum and Evaluation Standards for School Mathematics are integrated into every chapter Other topics include Diversity in the Classroom Lesson Design Creating Lessons That Meet the Needs of a Diverse Classroom Mathematics Learning in Early Childhood Whole Numbers and Numeration Fractions Decimals and Percents Measurement and Geometry

**Teaching Mathematics to Students With Learning Disabilities** Francis Obudo,2008 The purpose of this study was to review and synthesize available literature to draw a comprehensive picture of what is necessary to teach mathematics to students with learning disabilities A systematic search was conducted through 5 computerized databases Academic Search Complete ERIC Education Research Complete and Primary Search The descriptors used were teaching mathematics to students with learning disabilities and effective mathematics instruction and learning disabilities Only documents that were available in full text from the databases were included The next step in the selection process involved a search through the reference list of the obtained articles This review of literature found that there are four important factors in determining success in mathematics for students with learning disabilities LD They are teacher training teacher attitudes perceptions use of effective strategies use of assistive technologies and the application of an effective curriculum Studies indicated that teachers are inadequately prepared to teach students with learning disabilities especially in math The use of effective strategies is especially important to students with LD Use of strategies is even more important than using drill and practice and mediated instruction strategies The curriculum s that most students with LD are exposed to are ineffective because little emphasis is put on the everyday application of mathematics in their lives A comprehensive approach that addresses teacher deficiencies and closes the gap between research and practice is necessary to address the problems faced by students with LD Well trained teachers will have the knowledge and skills to employ effective strategies use assistive technologies and have positive attitudes towards their students The implementation of an effective mathematics curriculum that is relevant to students lives and emphasizes problem solving will help students with learning disabilities acquire the mathematics skills necessary for them to be successful

**Teaching Mathematics to Students with Learning Disabilities** Nina S. Chuang,1995 *Teaching Mathematics to Students with Learning Disabilities* Lisa L. Widerholt,1998 *Effective Strategies for Teaching Math to Students with Learning Disabilities* Paulette Morein, Henry G. Bruckman, State University College at Buffalo. Department of Exceptional Education,1996 Buffalo State College Master s project in Exceptional Education 1996 *Teaching Mathematics to Students with Learning Disabilities and Studying that Instruction Using a Single Subject Design Approach* Ani Derderian,2013 The primary purpose of this study was to examine a largely unexplored area of teaching strategies for students with mathematical learning disabilities The second goal of this study was to find whether the concrete representational abstract multisensory teaching map thinking strategy would increase mathematical achievement in students with mathematical learning disabilities The sample of this study was three students with

mathematical learning disabilities from Amman Jordan Students were evaluated with 152 multiplication and division problems This research involved the completion of a single subject design which entails collecting numeric scores through tests Next the data was prepared and organized for graphical analysis In this research a graphical statistical analysis was implemented to address the research question The analysis procedure described trends in data However the researcher used descriptive analysis such as measures of variability the spread of the scores the relative ranking of the scores The results were presented in a graph and in a detailed discussion to address the research question Additional qualitative research was implemented with the three students The researcher conducted the interviews and eight open ended questions were used for coding The researcher then independently recorded the responses with the clarified themes Four themes or categories of open ended responses were identified i e difficulties number organization memorization language skill levels The researcher recorded the data via a variety of methods interviews observation field notes etc coding and categorizing using a variety of clustering and classification schemes attaching concepts to the categories and writing an understanding However the results suggest that more research might be focused a to replicate the study on different mathematical concepts and different subject areas b arrange workshops for teachers and parents to increase their teaching effectiveness level c apply more tools such as case studies interviews and self assessment methods to assess the effectiveness level of mathematics teaching and learning strategies d engage students with mathematical learning disabilities and consider their images on the mathematics curriculum s effectiveness

*Teaching Elementary Mathematics to Struggling Learners* Bradley S. Witzel, Mary E.
