Young Children as Mathematicians Dianna Mannigel, 1992 This text is

for students in early childhood teacher education courses It focuses on mathematics education with children from three to eight years in preschool and the early primary grades It could also be used by teachers wishing to become familiar with maths in these early childhood years The integration of theory and practice occurs through topics about how children learn what they learn as young mathematicians the provision of an appropriate learning environment and relevant teaching strategies The text provides a developmental basis for new approaches to mathematics education and explains how teachers can organise the learning environment so children can construct their own knowledge It steers a middle course between closed over structured teaching and laissez faire unsupported experience Detailed lists of developmental sequences help teachers to identify children s mathematical thinking so they can offer appropriate support at the right time It offers guidance in the use of curriculum documents from state education departments for developing a mathematics program In view of increasing use of games in maths education a chapter offers not only games but general principles about the use purchase and adaptation of games Each chapter includes activities for students

Sydney L. Schwartz, 2005-09-30 Children learn mathematics most effectively in contexts that are meaningful to them Realizing the potential of these contexts for fostering young children s mathematical learning while nurturing and challenging them requires knowledge of mathematics as well as of child development Avoiding the debates surrounding hands on learning vs direct instruction the author focuses on the value of different contexts for learning and illustrates ways to genuinely engage children as active learners The work is rich with examples of children s interactions with each other and with adults as they utilize and extend their understanding of mathematics Examples and guidelines for developing lessons and activities will be useful to educators and parents Chapters explore how we underestimate young children s mathematical capabilities how appropriate sequencing of learning and building on prior knowledge will enhance understanding what teachers including parent teachers need to know and high stakes testing This is a work that brings together the connections between knowing the basics and constructing knowledge in accessible and practical ways

Learning and Teaching

Early Math Douglas H. Clements, Julie Sarama, 2014-05-23 In this important book for pre and in service teachers early math experts Douglas Clements and Julie Sarama show how learning trajectories help diagnose a child s level of mathematical understanding and provide guidance for teaching By focusing on the inherent delight and curiosity behind young children s mathematical reasoning learning trajectories ultimately make teaching more joyous They help teachers understand the varying levels of knowledge exhibited by individual students which in turn allows them to better meet the learning needs of all children Using straightforward no nonsense language this book summarizes the current research about how children learn mathematics and how to build on what children already know to realize more effective teaching This second edition of Learning and Teaching Early Math remains the definitive research based resource to help teachers understand the learning trajectories of early mathematics and become quintessential professionals Updates to the new edition include Explicit

features for young children's learning. Still, there are quite different views on the definitions of play and in what ways play should become part of children's learning. The chapters of the book mirror the research topics presented at the fifth POEM conference in May 2022, divided into four sub-themes: Play and learning; Children's perspectives on mathematics; Teachers' competencies; and Theorizing aspects of early mathematics education.
