Christopher Smith, 2002-09-09 For 7 000 years after the last ice age the people of the British Isles subsisted by hunting wild game and gathering fruits of the forest and foreshore Belonging to the late Upper Palaeolithic and Mesolithic periods these hunter gatherers have hitherto been viewed mainly in terms of stone tool typologies late Stone Age Hunters of the British Isles departs from this conventional approach reassessing the archaeological evidence and placing it within a wider ecological and geographical context This well illustrated study which includes case studies maps and photographs provides a balanced approach to the study of a period that demands multi disciplinary treatment It outlines a range of considerations that have a bearing on the study of early societies in the British Isles and also forms a useful guide to communities themselves as represented by known archaeological sites **Dorothy Garrod and the Progress of the Palaeolithic**

William Davies, Ruth Charles, 2017-03-20 Dorothy Garrod opened many doors not only was she the first female professor at

Cambridge University but she illuminated and in some cases initiated some of prehistoric archaeology's most central issues. The quiet yet self-possessed woman was best known as a fieldworker often venturing into dangerous regions such as Kurdistan. Her first and highly successful excavation revealed fragments of Neanderthal fossils in Gibraltar. This volume reviews modern research on this site as well as exploring other issues which interested the Disney Professor of Archaeology: hominid remains from Mount Carmel, Palaeolithic sites in the Zagros Mountains, Bulgaria and Britain and the cultural evidence for the beginning of Near Eastern food production which Garrod called Natufian. Also included are papers concerned with her life background and published work. The topics span and continuing relevance are testament to Dorothy Garrod's remarkable character and great achievements.

**Multidisciplinary Approaches to the Study of Stone Age Weaponry** Radu Iovita, Katsuhiko Sano, 2016-05-28 The objective of this volume is to showcase the contemporary state of research on recognizing and evaluating the performance of stone age weapons from a variety of viewpoints including investigating their cognitive and evolutionary significance. New archaeological finds and experimental studies have helped to bring this subject back to the forefront of human origins research. In the last few years, investigations have expanded beyond examining the tools themselves to include studies of damage caused by projectile weapons on animal and hominin bones and skeletal asymmetries in ancient hominin populations. Only recently has there been a growing interest in controlled and replicative experiments. Through this book, readers will be updated in the state of knowledge through a multidisciplinary scientific reconstruction of prehistoric weapon use and its implications. Contributions from expert authors are organized into three themed parts: recognizing weapon use, experimental and archaeological studies of impact traces, performance of weapon systems, factors influencing penetration depth etc. and behavioral and evolutionary
