Studies In Statistics:

Statistics Applied to Clinical Studies Ton J. Cleophas, Aeilko H. Zwinderman, 2012-02-09 Thanks to the omnipresent computer current statistics can include data files of many thousands of values and can perform any exploratory analysis in less than seconds This development however fascinating generally does not lead to simple results We should not forget that clinical studies are mostly for confirming prior hypotheses based on sound arguments and the simplest tests provide the best power and are adequate for such studies In the past few years the authors of this 5th edition as teachers and research supervisors in academic and top clinical facilities have been able to closely observe the latest developments in the field of clinical data analysis and they have been able to assess their performance In this 5th edition the 47 chapters of the previous edition have been maintained and upgraded according to the current state of the art and 20 novel chapters have been added after strict selection of the most valuable and promising novel methods The novel methods are explained using practical examples and step by step analyses readily accessible for non mathematicians All of the novel chapters have been internationally published by the authors in peer reviewed journal including the American Journal of Therapeutics the European Journal of Clinical Investigation The International journal of Clinical Pharmacology and therapeutics and other journals and permission is granted by all of them to use this material in the current book We should add that the authors are well qualified in their fields of knowledge Professor Zwinderman is president elect of the International Society of Biostatistics and Professor Cleophas is past president of the American College of Angiology From their expertise they should be able to make adequate selections of modern methods for clinical data analysis for the benefit of physicians students and investigators The authors although from a different discipline one clinician and one statistician have been working and publishing together for over 10 years and their research of statistical methodology can be characterized as a continued effort to demonstrate that statistics is not mathematics but rather a discipline at the interface of biology and mathematics They firmly believe that any reader can benefit from this clinical approach to statistical data analysis Studies in Occupations
