

Supernovae and Cosmology

- Analyze lightcurves vs. redshifts for many Type 1a supernovae at redshifts $z < 2$
- Observations of over 100 SN (over 7 years) by Perlmutter et al. and Schmidt et al. have showed that they are dimmer than would be expected if the Universe was expanding at a constant rate or slowing down (as was previously thought)
- This is evidence that some unknown “dark energy” is causing the Universe to fly apart at ever-increasing speeds.

Astronomy And Astrophysics: Recent Developments - Procs Of The 10th Portuguese Meeting Jose Pizarro S Lemos, Ana Maria Mourao, Luis Teodoro, Roberto Ugoccioni, 2001-11-12 This book discusses many of the recent theoretical and observational developments that have significant implications for astronomy and astrophysics The main themes are i cosmology ii gravitational wave astronomy and gravitational physics iii stellar astrophysics and iv active galactic nuclei and disk accretion There are also contributions on the solar system Hadrons, Nuclei And Applications, Procs Of The Conf "Bologna 2000: Structure Of The Nucleus At The Dawn Of The Century" (Vol 3) Giovanni C Bonsignori, Mauro Bruno, Alberto Ventura, Dario Vretenar, 2001-11-09 The Conference Bologna 2000 Structure of the Nucleus at the Dawn of the Century was devoted to a discipline which has seen a strong revival of research activities in the last decade New experimental results and theoretical developments in nuclear physics will certainly make important contributions to our knowledge and understanding of Nature s fundamental building blocks The interest aroused by the Conference among the scientific community was clearly reflected in the large number of participants These represented the most important nuclear physics laboratories in the world The Conference covered five major topics of modern nuclear physics nuclear structure nucleus nucleus collisions hadron dynamics nuclear astrophysics and transdisciplinary and peaceful applications of nuclear science It reviewed recent progress in the field and provided a forum for the discussion of current and future research projects Physics In Collision Xix, Procs Myron Campbell, Jianming Qian, 2000-07-27 The XIX Physics in Collision conference reviewed experimental results in electroweak quantum chromodynamics neutrino bottom and rare kaon physics and updated recent developments in the area of gamma ray bursts as well as the issue of the cosmological constant and dark matter The conference opened with reports on electroweak physics A decade of precision experiments in laboratories around the world failed to uncover any significant deviations from standard model predictions Precise W boson and top quark mass measurements suggest a low mass Higgs boson in the standard model possibly within the reach of the LEP II and the upgraded Tevatron colliders These presentations were followed by a summary of the latest results on searches for Higgs and supersymmetry There were three reports on neutrino physics atmospheric solar and reactor accelerator based neutrino experiments and results Impressive Super K results strongly suggest oscillation a scenario confirmed by less precise Soudan2 and MACRO data The latest results on strange and heavy quark physics were summarized High statistics from CLEO LEP I and Tevatron have enabled experimenters to study many rare charm and bottom quark decays for the first time Among many other interesting results presented the first measurements of $\sin^2 \theta_W$ by CDF and by KTeV provide a preview of expected developments in the near future From Twilight to Highlight: The Physics of Supernovae W. Hillebrandt (Ed), 2003-02-27 Supernovae their bearing on cosmology and their connection to gamma ray bursts are now at the center of astrophysical research programs This volume deals with astronomical observations of supernovae and their relation to nuclear and particle astrophysics All known

aspects of supernovae explosions are investigated in articles specifically written for researchers and advanced graduate students It also includes recent numerical experiments related to the question of hydrodynamical instability in two and three dimensions and to problems concerning the complexity of radiation transport in the models Other contributions discuss the possible energy sources needed to drive these powerful stellar explosions

Rates and Progenitors of Type 1a Supernovae William Michael Wood-Vasey,2004 Neutrino Physics and Astrophysics G. Bellini,L. Ludhova,2012-12-04 And discussion of current boundsFuture sensitivities on neutrino masses from cosmology Conclusions Neutrinos and the stars Introduction Neutrinos from ordinary stars Some basics of stellar evolution Neutrino emission processes Neutrino electromagnetic properties Globular clusters testing stellar evolution and particle physics White dwarf cooling Neutrinos from the Sun Solar neutrino measurements and flavor oscillations Helioseismology and the solar opacity problem Sun as a particle source Supernova neutrinos Classification of supernovae Explosion mechanism Relativity: Modern Large-scale Spacetime Structure Of The Cosmos Moshe Carmeli,2008-12-04 This book describes Carmeli s cosmological general and special relativity theory along with Einstein s general and special relativity These theories are discussed in the context of Moshe Carmeli s original research in which velocity is introduced as an additional independent dimension Four and five dimensional spaces are considered and the five dimensional braneworld theory is presented The Tully Fisher law is obtained directly from the theory and thus it is found that there is no necessity to assume the existence of dark matter in the halo of galaxies nor in galaxy clusters The book gives the derivation of the Lorentz transformation which is used in both Einstein s special relativity and Carmeli s cosmological special relativity theory The text also provides the mathematical theory of curved space time geometry which is necessary to describe both Einstein s general relativity and Carmeli s cosmological general relativity A comparison between the dynamical and kinematic aspects of the expansion of the universe is made Comparison is also made between the Friedmann Robertson Walker theory and the Carmeli theory And neither is it necessary to assume the existence of dark matter to correctly describe the expansion of the cosmos

Frontiers of Fundamental Physics B. G. Sidharth,Furio Honsell,Alessandro De Angelis,2007-09-18 The Sixth International Symposium Frontiers of Fundamental and Computational Physics Udine Italy 26 29 September 2004 aimed at providing a platform for a wide range of physicists to meet and share thoughts on the latest trends in various mainly cross disciplinary research areas This includes the exploration of frontier lines in High Energy Physics Theoretical Physics Gravitation and Cosmology Astrophysics Condensed Matter Physics Fluid Mechanics Such frontier lines were unified by the use of computers as an often primary research instruments or dealing with issues related to information theory The book contains contributions by Nobel Laureates Leon N Cooper 1972 and Gerard t Hooft 1999 and concludes with two interesting chapters on new approaches to Physics Teaching Audience Graduate students lecturers and researches in Physics

Procs Of The 21st Century Chinese Astronomy Conf: Dedicated To Prof C C Lin K L Chan,K S Cheng,1997-10-22 As a country with 5000 years of history

China has made tremendous contributions to astronomy The 21st century marks the beginning of a new era for the astronomy of that country This is the proceedings of a conference held to honour Prof C C Lin the leading Chinese astronomer in the world academic community on his 80th birthday Physics Before and After Einstein Marco Mamone Capria, 2005 It is now a century ago that one of the icons of modern physics published some of the most influential scientific papers of all times With his work on relativity and quantum theory Albert Einstein has altered the field of physics forever It should not come as a surprise that looking back at Einstein's work one needs to rethink the whole scope of physics before and after his time This book aims to provide a perspective on the history of modern physics spanning from the late 19th century up to today It is not an encyclopaedic work but it presents the groundbreaking and sometimes provocative main contributions by Einstein as marking the line between old and new physics and expands on some of the developments and open issues to which they gave rise This presentation is not meant as a mere celebration of Einstein's work but as a critical appraisal which provides accurate historical and conceptual information The contributing authors all have a reputation for working on themes related to Einstein's work and its consequences Therefore the collection of papers gives a good representation of what happened in the 100 years after Einstein's landmark *Annalen der Physik* articles All people interested in the field of physics history of science and epistemology could benefit from this book An effort has been made to make the book attractive not only to scientists but also to people with a more basic knowledge of mathematics and physics
