Superpower Space Race An Explosive Rivalry Through The Solar System:

The Superpower Space Race Robert REEVES, 2013-11-11 When the U S S R launched the first satellite into Earth orbit on October 4 1957 a wave of fear and awe shook the world In the heart of the Cold War this first satellite was a threatening show of power and the decisive event that led to the infamous space rivalry between the U S S R and the United States Launching missile after missile skyward each superpower goaded its rival with impressive feats in space each determined to prove to the world its technological superiority As this engrossing work so clearly shows it was in this pressure cooker of competition that each country achieved undreamed of advances stretching the boundaries of humankind s domain and giving us the first thrilling close ups of the heavenly bodies in our solar system The Space Age proved to be a rare instance in history an era when two nations managed to call on their best and brightest to work single mindedly toward a goal Funded by millions of dollars and employing the talents of the top scientists and engineers from universities the military and in the United States the private sector the space programs on each side of the Iron Curtain worked with determination and genius to build the incredible craft that would take us to the Moon and beyond Robert Reeves a respected historian of the Space Age and contributor to Astronomy Amateur Astronomy and Deep Sky Journal describes the massive power and capabilities of these spaceships Designed to overcome staggering obstacles our spaceships accomplished what was once deemed impossible Both the Soviets and the Americans succeeded in landing craft with amazing precision on the nearly airless surface of the Moon American space probes touched down on the rocky surface of Mars while the Soviets succeeded in building probes that could withstand the hellish heat and deadly pressure of the Venusian surface transmitting photographs and readings that were inaccessible from Earth Scientists today are still analyzing this invaluable information deducing the story of our solar system by studying the craters on the Moon the mysterious channels on Mars and the nightmarish surface of Venus Reeves illuminates the brilliant achievements and bitter tragedies of conquering the inner solar system Fueled by pride and national honor funded by politicians and designed by the leading engineers of the world each hard earned mission was at once a political triumph for each nation and a scientific triumph for humankind Reeves traces this most exciting history from its extraordinary genesis to the present and looks toward future cooperative ventures which will with funding luck and united effort yield knowledge and adventure beyond our wildest dreams

Space Politics and Policy E. Sadeh, 2002

Space Politics and Policy An Evolutionary Perspective provides a comprehensive survey of Space Policy This book is organized around two themes Space Policy is evolutionary in that it has responded to dramatic political events such as the launching of Sputnik and the Cold War and has undergone dynamic and evolutionary policy changes over the course of the space age Space Policy is an integral part of and interacts with public policy processes in the United States and abroad The book analyzes Space Policy at several levels including historical context political actors and institutions political processes and policy outcomes It examines the symbiotic relationships between policy technology and science provides a review and

synthesis of the existing body of knowledge in Space Policy and identifies Space Policy trends and developments from the beginnings of the space age through the current era of the twenty first century Exploring the Solar System R.

Launius,2012-12-28 Beginning in the early days of the Space Age well before the advent of manned spaceflight the United States followed soon by other nations undertook an ambitious effort to study the planets of the solar system The remarkable fruits of this research revolutionized the public s view of their celestial neighbors capturing the imaginations of people from all backgrounds like nothing else save the Apollo lunar missions From the first space probes to the most recent planetary rovers they have continually delivered impressive discoveries and reshaped our understanding of the cosmos Offering fascinating investigations into this crucial chapter in space history this collection of specially commissioned essays from leading historians opens new vistas in our understanding of the development of planetary science **Robots In Space**

Roger D. Launius,Howard E. McCurdy,2008-02-11 A look into the history of space exploration and its possible future and just where exactly robotics fit into it all Given the near incomprehensible enormity of the universe it appears almost inevitable that humankind will one day find a planet that appears to be much like the Earth This discovery will no doubt reignite the lure of interplanetary travel Will we be up to the task And given our limited resources biological constraints and the general hostility of space what shape should we expect such expeditions to take In **Robots in Space** Roger Launius and Howard McCurdy tackle these questions with rigorous scholarship and disciplined imagination jumping comfortably among the worlds of rocketry engineering public policy and science fantasy to expound upon the possibilities and improbabilities involved in trekking across the Milky Way and beyond They survey the literature fictional as well as academic studies and outline the progress of space programs in the United States and other nations They also assess the current state of affairs to offer a conclusion startling only to those who haven t spent time with Asimov Heinlein and Clarke to traverse the cosmos humans must embrace and entwine themselves with advanced robotic technologies 2008 Outstanding Academic Title Choice Magazine Praise for **Robots in Space** This short volume manages to capture the history of U S space flight to explain the underpinnings of U S space policy and to plot out the possibilities for our future in space in a style that most anyone can enjoy Andrew McMichael Park City Daily News Why Mars W. Henry Lambright,2014-06-10 Mars has captured the human

imagination for decades Since NASA s establishment in 1958 the space agency has looked to Mars as a compelling prize the one place beyond the Moon where robotic and human exploration could converge Remarkably successful with its roaming multi billion dollar robot Curiosity NASA s Mars program represents one of the agency s greatest achievements Why Mars analyzes the history of the robotic Mars exploration program from its origins to today W Henry Lambright examines the politics and policies behind NASA s multi decade quest illuminating the roles of key individuals and institutions along with their triumphs and defeats Lambright outlines the ebbs and flows of policy evolution focusing on critical points of change and factors that spurred strategic reorientation He explains Mars exploration as a striking example of big science and describes

the ways a powerful advocacy coalition composed of NASA decision makers the Jet Propulsion Laboratory the Mars academic science community and many others has influenced governmental decisions on Mars exploration making it at times a national priority

Nelson Algren Richard F. Bales,2024-11-01 This book addresses critical gaps in existing biographies of Nelson Algren providing new perspectives on his writing style literary contributions professional colleagues and personal life especially his relationship with Simone de Beauvoir Although Beauvoir maintained a simultaneous relationship with philosopher Jean Paul Sartre the correspondence exchanged between Beauvoir Algren and Sartre as this book discusses sheds new light on her transatlantic love affair with Algren Moreover this work challenges the assertion that Algren s writing aligns seamlessly with the New Journalism style popularized by Tom Wolfe It investigates how Algren s literary legacy might have diverged had he embraced more of the principles associated with New Journalism

Space Exploration and Humanity American Astronautical Society,2010-08-23 A complete history of human endeavors in space this book also moves beyond the traditional topics of human spaceflight space technology and space science to include political social cultural and economic issues and also commercial civilian and military applications In two expertly written volumes Space Exploration and Humanity A Historical Encyclopedia covers all aspects of space flight in all participating nations ranging from the Cold War era beginnings of the space race to the lunar landings and the Apollo Soyuz mission from the Shuttle disasters and the Hubble telescope to Galileo the Mars Rover and the International Space Station The book moves beyond the traditional topics of human spaceflight space technology and space science to include political social cultural and economic issues and also commercial civilian and military applications Produced in conjunction with the History Committee of the American Astronautical Society this work divides its coverage into six sections each beginning with an overview essay followed by an alphabetically organized series of entries on topics such as astrophysics and planetary science civilian and commercial space applications human spaceflight and microgravity science space and society and space technology and engineering Whether investigating a specific issue or event or tracing an overarching historic trend students and general readers will find this an invaluable resource for launching their study of one of humanity s most extraordinary endeavors

Redeemer Nation Orrin Schwab,2004 In this book Dr Orrin Schwab develops the concept of the modern technocratic state as part of a global technocratic culture and civilization The author argues that technocratic cultural and institutional forms were and are part of a collective script for Western culture The American script combined the scientific commercial and technological aspects of the Enlightenment with the radical 17th century Protestant belief in America as a new Zion In the twentieth century the synthesis of mission along with global technocratic knowledge and institutions created the Wilsonian liberal technocratic order As the principal agent and protector of the modern capitalist international system America the self defined Redeemer Nation has moved through the controlled anarchy of international relations from one war and crisis to the next confirmed in its self defined role and mission

New Cosmic Horizons David Leverington,2000 New Cosmic Horizons tells the

extraordinary story of space based astronomy since the Second World War Starting with the launch of the V2 rocket in 1946 this book explores the triumphs of space experiments and spacecraft designs and the amazing astronomical results that they have produced It also examines the fascinating way in which the changing political imperatives of the USA USSR and Western Europe have modified their space astronomy programmes This history of astronomy from space is extensively illustrated and unique in its coverage of such a broad range of topics in language accessible to amateur and professional astronomers and other technically minded readers All major astronomy missions of the first fifty years of space research are covered the Soviet Sputnik and American Explorer projects the subsequent race to the moon solar and planetary missions and the wonders of modern astrophysics culminating in the exciting results of the Hubble Space Telescope

The ^AApollo Chronicles Brandon R. Brown, 2019-05-08 A uniquely earthbound story of space travel The Apollo Chronicles immerses readers in the obsessive lives and work of NASA s engineers from the starting gun of the space race through the triumphant Moon landings Filled with new interviews scrubbed of technical jargon and infused with the turbulent backdrop of the 1960 s the narrative follows a handful of main characters through their longest days tightest deadlines and most confounding challenges In the end the surviving engineers reflect How exactly did we do it and what did we learn
