Supramolecular Stereochemistry J.S. Siegel, 2012-12-06 Proceedings of the NATO Advanced Research Workshop Hveragerdi Iceland September 14 19 1994 **Dynamic Stereochemistry of Chiral Compounds** Christian Wolf, 2008 A comprehensive overview of fundamental concepts of asymmetric synthesis along with in depth discussion Recent developments that address important synthetic challenges are presented and highlighted with hundreds of examples

Modern Physical Organic Chemistry Eric V. Anslyn, Dennis A. Dougherty, 2006 Making explicit the connections between physical organic chemistry and critical fields such as organometallic chemistry materials chemistry bioorganic chemistry and biochemistry this book escorts the reader into an area that has been thoroughly updated in recent times **Chirality in**

Supramolecular Assemblies F. Richard Keene, 2016-11-14 Supramolecular chemistry deals with the organisation of molecules into defined assemblies using non covalent interactions including weaker and reversible interactions such as hydrogen bonds and metal ligand interactions The aspect of stereochemistry within such chemical architectures and in particular chirality is of special interest as it impacts on considerations of molecular recognition the development of functional materials the vexed question of homochirality nanoscale effects of interactions at interfaces biocatalysis and enzymatic catalysis and applications in organic synthesis Chirality in Supramolecular Assemblies addresses many of these aspects presenting a broad overview of this important and rapidly developing interdisciplinary field Topics covered include Origins of molecular and topological chirality Homochirogenesis Chirality in crystallinity Host guest behavior Chiral influences in functional materials Chirality in network solids and coordination solids Aspects of chirality at interfaces Chirality in organic assemblies Chirality related to biocatalysis and enzymes in organic synthesis This book is a valuable reference for researchers in the molecular sciences materials science and biological science working with chiral supramolecular systems It provides summaries and special insights by acknowledged international experts in the various fields

Chirality at the Nanoscale David B. Amabilino, 2009-02-11 The only standard reference in this exciting new field combines the physical chemical and material science perspectives in a synergic way This monograph traces the development of the preparative methods employed to create nanostructures in addition to the experimental techniques used to characterize them as well as some of the surprising physical effects The chapters cover every category of material from organic to coordination compounds metals and composites in zero one two and three dimensions The book also reviews structural chemical optical and other physical properties finishing with a look at the future for chiral nanosystems *New Methods for the Study of Biomolecular Complexes* W. Ens, K.G. Standing, I. Chernushevich, 2013-03-09 A NATO Advanced Research Workshop entitled New Methods for the Study of Molecular Aggregates was held at The Lodge at Kananaskis Village Alberta Canada from 16 20 June 1996 In fact the meeting was entirely concerned with the problem of analyzing biomolecular complexes so the title of these proceedings has been altered to give a more precise description of the content

The workshop was hosted by the time of flight group of the Department of Physics at the University of Manitoba and was attended by 64 participants from around the world twenty one invited talks were given and 27 papers were presented as posters Of the 48 contributions 22 papers 12 orals 10 posters are included in these proceedings The subject of the conference was the investigation of noncovalent biomolecular complexes with particular focus on the application of mass spectrometry to their characterization via new ionization techniques introduced in the late 1980s electrospray ionization ESI and matrix assisted laser desorption/ionization MALDI resulted in a breakthrough in mass spectrometry enabling its use in molecular weight and primary structure determination of biopolymers larger than 100 kDa Recently it has been discovered that ESI mass spectrometry may also be used to characterize complexes containing noncovalent interactions thus opening new perspectives for supramolecular chemistry ESI mass spectrometry has the advantage that the sample is introduced from a homogeneous solution which can be maintained at near physiological conditions of pH concentration and temperature
