Surface Alloying By Ion Electron And Laser Beams:

Surface Modification and Alloying J.M. Poate, G. Foti, D.C. Jacobson, 2013-11-21 This book is an outcome of the NATO institute on surface modification which was held in Trevi 1981 Surface modification and alloying by ion electron or laser beams is proving to be one of the most burgeoning areas of materials science The field covers such diverse areas as integrated circuit processing to fabricating wear and corrosion resistant surfaces on mechanical components The common scientific questions of interest are the microstructures by the different energy deposition techniques and associated physical properties produced The chapters constitute a critical review of the various subjects covered at Trevi Each chapter author took responsibility for the overall review and used contributions from the many papers presented at the meeting each participant gave a presentation The contributors are listed at the start of each chapter We took this approach to get some order in a large and diverse field We are indebted to all the contributors in particular the chapter authors for working the many papers into coherent packages to Jim Mayer for hosting a workshop of chapter authors at Cornell and to Ian Bubb who did a sterling job in working over some of the manuscripts Our special thanks are due to the text processing center at Bell Labs who took on the task of assembling the book In particular Karen Lieb and Beverly Heravi typed the whole manuscript and had the entire book phototypeset using the Bell Laboratories UNIXTM system

Engineering Thin Films and Nanostructures with Ion Beams Emile Knystautas, 2018-10-03 While ion beam techniques have been used to create thin films in the semiconductor industry for several decades these methods have been too costly for other surface treatment applications However as manufacturing devices become increasingly smaller the use of a directed energy ion beam is finding novel industrial applications that require the custom tailoring of new materials and devices including magnetic storage devices photonics opto electronics and molecular transport *Engineering Thin Films and Nanostructures with Ion Beams* offers a thorough narrative of the recent advances that make this technology relevant to current and future applications Featuring internationally recognized researchers the book compiles their expertise in a multidimensional source that Highlights the mechanisms and visual evidence of the effects of single ion impacts on metallic surfaces Considers how ion beam techniques can help achieve higher disk drive densities Introduces gas cluster ion beam technology and reviews its precedents Explains how ion beams are used to aggregate metals and semiconductors into nanoclusters with nonlinear optical properties Addresses current challenges in building equipment needed to produce nanostructures in an industrial setting Examines the combination of ion beam techniques particularly with physical vapor deposition Delineates the fabrication of nanopillars nanoflowers and interconnected nanochannels in three dimensions by using atomic shadowing techniques Illustrates the production of nanopores of varying dimensions in polymer films alloys and superconductors using ion beam irradiation Shows how fingerprints can be made more reliable as forensic evidence by recoil mixing them into the substrate using ion beams From the basics of the ion beam modification of materials to state of the art applications
