Organic Molecules for Nonlinear Optics and Photonics J. Messier, F. Kajzar, P. Prasad, 2012-12-06 Photonics is being labelled by many as the technology for the 21st century Because of the structural flexibility both at the molecular and bulk levels organic materials are emerging as a very important class of nonlinear optical materials to be used for generating necessary nonlinear optical functions for the technology of photonics Since the last NATO advanced research workshop on Polymers for Nonlinear Optics held in June 1988 at Nice Sophia Antipolis France there has been a tremendous growth of interest worldwide and important development in this field Significant progress has been made in theoretical modeling material development experimental studies and device concepts utilizing organic materials These important recent developments provided the rationale for organizing the workshop on Organic Materials for Nonlinear Optics and Photonics which was held in La Rochelle France in August 1990 This proceeding is the outcome of the workshop held in La Rochelle The objective of the workshop was to bring together scientists and engineers of varied backgrounds working in this field in order to assess the current status of this field by presenting significant recent developments and make recommendations on future directions of research The workshop was multidisciplinary as it had contributions from chemists physicists materials scientists and device engineers The participants were both from industries and universities The workshop included plenary lectures by leading international scientists in this field contributed research papers and a poster session Panel discussion groups were organized to summarize important developments and to project future directions Laser Applications in Surface Science and Technology Horst-Günter Rubahn, 1999-03-17 Lasers are becoming increasingly important in surface science both for the diagnostic evaluation and the processing of surfaces for example higher harmonic generation for diagnosis and the widespread use of laser surface microstructuring and annealing for processing The physics behind such applications might be described in some cases by simple heating and melting processes but can also include much more complex phenomena such as plasma generation or elementary collective surface excitations Laser Applications in Surface Science and Technology provides an overview of the different techniques discusses the principles behind them and gives a concise description of laser induced and laser detected processes on surfaces Recent developments in the field such as nonlinear surface spectroscopies and the interactions of ultrashort pulses with materials are also introduced Invaluable reading for postgraduate students and research scientists across a wide range of disciplines including physics chemistry electronic engineering and materials science **Developments in Surface Contamination and Cleaning** Rajiv Kohli, Kashmiri L. Mittal, 2008-01-10 Surface contamination is of cardinal importance in a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical Thus the need to understand the causes of surface contamination and their removal is very patent Generally speaking there are two broad categories of surface contaminants

film type and particulates In the world of shrinking dimensions such as the ever decreasing size of microelectronic devices there is an intensified need to understand the behavior of nanoscale particles and to devise ways to remove them to an acceptable level Particles which were functionally innocuous a few years ago are killer defects today with serious implications for yield and reliability of the components This book addresses the sources detection characterization and removal of both kinds of contaminants as well as ways to prevent surfaces from being contaminated A number of techniques to monitor the level of cleanliness are also discussed Special emphasis is placed on the behaviour of nanoscale particles The book is amply referenced and profusely illustrated Excellent reference for a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical A single source document addressing everything from the sources of contamination to their removal and prevention Amply referenced and profusely illustrated
