Surfaces and Their Measurement David J. Whitehouse, 2012 **Ibn al-Haytham's Theory of Conics, Geometrical Constructions and Practical Geometry** Roshdi Rashed, 2013-06-26 Theory of Conics Geometrical Constructions and Practical Geometry A History of Arabic Sciences and Mathematics Volume 3 provides a unique primary source on the history and philosophy of mathematics and science from the mediaeval Arab world The present text is complemented by two preceding volumes of A History of Arabic Sciences and Mathematics which focused on founding figures and commentators in the ninth and tenth centuries and the historical and epistemological development of infinitesimal mathematics as it became clearly articulated in the oeuvre of Ibn al Haytham This volume examines the increasing tendency after the ninth century to explain mathematical problems inherited from Greek times using the theory of conics Roshdi Rashed argues that Ibn al Haytham completes the transformation of this area of activity into a part of geometry concerned with geometrical constructions dealing not only with the metrical properties of conic sections but with ways of drawing them and properties of their position and shape Including extensive commentary from one of world's foremost authorities on the subject this book contributes a more informed and balanced understanding of the internal currents of the history of mathematics and the exact sciences in Islam and of its adaptive interpretation and assimilation in the European context This fundamental text will appeal to historians of ideas epistemologists and mathematicians at the most advanced levels of research

Properties of Electrodeposits, Their Measurement and Significance Richard

Sard, Henry Leidheiser, Fielding Ogburn, 1975 Understanding Radioactive Aerosols and Their Measurement S.D.

Schery, 2001-07-31 This book is intended as an introduction to radioactivity and aerosols for the scientifically literate reader who has had no previous exposure to either of these subjects. Although its main focus is radioactive aerosols on the road to this subject, I provide short, somewhat independent introductions to both radioactivity and aerosols with some emphasis on experimental aspects. The audience I have in mind is upper level undergraduates or beginning graduate students with a minimum background of introductory college courses in physics, chemistry, and calculus. This book may also be useful to crossover professional professionals in other fields of science and engineering, for example biology or geoscience, who would like a step by step introduction to this subject matter from the physical science perspective. In writing this book, I have been sensitive to requests and suggestions from students who need some background in this subject matter but will probably not specialize in it. These students are bright but busy and they sometimes feel overwhelmed by the mass of information in advanced comprehensive texts. No matter how noble the intentions of the authors or the teachers assigning the books, these students often do not have time to read such books through cover to cover and they find it difficult to pick out a coherently connected subset of the material. Furthermore, modern students studying an interdisciplinary subject like radioactive aerosols are likely to be more diversified than ever in educational background, in interests, and in preparation.

Precision Metal Additive Manufacturing Richard Leach, Simone Carmignato, 2020-09-21 Additive manufacturing (AM) is a fast growing sector with the ability to evoke a revolution in manufacturing due to its almost unlimited design freedom and its capability to produce personalised parts locally and with efficient material use. AM companies, however, still face technological challenges such as limited precision due to shrinkage, built-in stresses, and limited process stability and robustness. Moreover, often post processing is needed due to high roughness and remaining porosity. Qualified trained personnel are also in short supply. In recent years, there have been dramatic improvements in AM design methods, process control, post processing, material properties, and material range. However, if AM is going to gain a significant market share, it must be developed into a true precision manufacturing method. The production of precision parts relies on three principles: Production is robust, i.e. all sensitive parameters can be controlled; Production is predictable, for example the shrinkage that occurs is acceptable because it can be predicted and compensated in the design; Parts are measurable, as without metrology, accuracy, repeatability, and quality assurance cannot be known. AM of metals is inherently a high energy process with many sensitive and inter-related process parameters, making it susceptible to thermal distortions, defects, and process drift. The complete modelling of these processes is beyond current computational power, and novel methods are needed to practicably predict performance and inform design. In addition, metal AM produces highly textured surfaces and complex surface features that stretch the limits of contemporary metrology. With so many factors to consider, there is a significant shortage of background material on how to inject precision into AM processes. Shortage in such material is an important barrier for a wider uptake of advanced

manufacturing technologies and a comprehensive book is thus needed This book aims to inform the reader how to improve the precision of metal AM processes by tackling the three principles of robustness predictability and metrology and by developing computer aided engineering methods that empower rather than limit AM design Richard Leach is a professor in metrology at the University of Nottingham and heads up the Manufacturing Metrology Team Prior to this position he was at the National Physical Laboratory from 1990 to 2014 His primary love is instrument building from concept to final installation and his current interests are the dimensional measurement of precision and additive manufactured structures His research themes include the measurement of surface topography the development of methods for measuring 3D structures the development of methods for controlling large surfaces to high resolution in industrial applications and the traceability of X ray computed tomography He is a leader of several professional societies and a visiting professor at Loughborough University and the Harbin Institute of Technology Simone Carmignato is a professor in manufacturing engineering at the University of Padua His main research activities are in the areas of precision manufacturing dimensional metrology and industrial computed tomography He is the author of books and hundreds of scientific papers and he is an active member of leading technical and scientific societies He has been chairman organiser and keynote speaker for several international conferences and received national and international awards including the Taylor Medal from CIRP the International Academy for Production Engineering

Fundamentals of Modern Manufacturing Mikell P. Groover, 2010-01-07 Engineers rely on Groover because of the book's quantitative and engineering oriented approach that provides more equations and numerical problem exercises The fourth edition introduces more modern topics including new materials processes and systems End of chapter problems are also thoroughly revised to make the material more relevant Several figures have been enhanced to significantly improve the quality of artwork All of these changes will help engineers better understand the topic and how to apply it in the field
