Surfing through Hyperspace Clifford A. Pickover, 2001-05-17 Do a little armchair time travel rub elbows with a four dimensional intelligent life form or stretch your mind to the furthest corner of an uncharted universe With this astonishing guidebook *Surfing Through Hyperspace* you need not be a mathematician or an astrophysicist to explore the all but unfathomable concepts of hyperspace and higher dimensional geometry No subject in mathematics has intrigued both children and adults as much as the idea of a fourth dimension Philosophers and parapsychologists have meditated on this mysterious space that no one can point to but may be all around us Yet this extra dimension has a very real practical value to mathematicians and physicists who use it every day in their calculations In the tradition of *Flatland* and with an infectious enthusiasm Clifford Pickover tackles the problems inherent in our 3 D brains trying to visualize a 4 D world muses on the religious implications of the existence of higher dimensional consciousness and urges all curious readers to venture into the unexplored territory lying beyond the prison of the obvious Pickover alternates sections that explain the science of hyperspace with sections that dramatize mind expanding concepts through a fictional dialogue between two futuristic FBI agents who dabble in the fourth dimension as a matter of national security This highly accessible and entertaining approach turns an intimidating subject into a scientific game open to all dreamers *Surfing Through Hyperspace* concludes with a number of puzzles computer experiments and formulas for further exploration inviting readers to extend their minds across this inexhaustibly intriguing scientific terrain

Strung Together Sean Miller, 2013-03-18 In *Strung Together* The Cultural Currency of String Theory as a Scientific Imaginary Sean Miller examines the cultural currency of string theory both as part of scientific discourse and beyond it He demonstrates that the imaginative component of string theory is both integral and indispensable to it as a scientific discourse While mathematical arguments provide precise prompts for physical intervention in the world the imaginary that supplements mathematical argument within string theory technical discourse allows theorists to imagine themselves interacting with the cosmos as an abstract space in such a way that strings and branes as phenomena become substantiated and legitimized And it is precisely this sort of imaginary which Miller calls a scientific imaginary duly

substantiated and acculturated that survives the move from string theory technical discourse to popularizations and ultimately to popular and literary discourses In effect a string theory imaginary legitimizes the science itself and helps to facilitate a virtual domestication of a cosmos that was heretofore remote alien and incomprehensible **TranscEnding the Global Power Game** Armin Risi,2004-01-01 Whatever happens on the visible plane has its roots in invisible dimensions reality is more than meets the eye This is the essence of all spiritual teachings and mystery schools and it is the key to understanding what actually happens on the stage of the global power game Here in a unique compendium you get to know what the world looks like when seen from this paranormal viewpoint Step by step the author unfolds stunning insights into the hidden dimensions of secret politics money manipulations and the ongoing transformation The pieces are put together to reveal an exciting puzzle Topics Include Ancient knowledge and new revelations The conclusive meaning of the symbolism of light and darkness The ideology of the Illuminati The roots and goals of today s secret societies Prophecies regarding money and the crash Alien forces and the presence of lightbeings Our role in this cosmic drama Had Armin Risi lived in classical times he would now be counted among the great philosophers and theologians Being a contemporary author however he is able to go beyond classical philosophy and shed light on problems coverups and challenges of today using a revolutionary logic or mytho logic as he calls it Professor Jorg Rehberg Zurich *Alchemy of Nine Dimensions* Barbara Hand Clow,2024-11-05 Examines how each dimension influences Earth its levels of creative expression and the sciences that describe each one Provides meditations to open you to the experience of each dimension and all nine dimensions as an integrated whole Includes new evidence for the nine dimensions from the supercomputer Blue Brain Project and recently discovered ancient technology As revealed by the Pleiadians via renowned author Barbara Hand Clow Earth holds nine dimensions of consciousness that humans can currently access Long ago the ability to access all nine dimensions was natural for humans As we collectively heal from ancestral trauma and enter the Age of Light our access to the nine dimensions is reopening and our ability to learn from and consciously utilize these higher intelligences in our lives is being restored In this illuminating guide Barbara Hand Clow shows how the nine dimensions of consciousness are now being verified by contemporary science She explains how the first dimension is the center of the Earth and the source of grounding ourselves the second is between Earth s center and the surface the third is linear space and time experienced on Earth s crust the fourth is the realm of our collective mind and the higher five celestial dimensions are where we contact the transcendent She examines how each dimension influences Earth the sciences that operate there and the levels of creative expression available Additionally Gerry Clow has provided both written and audio meditations to open you to the experience of each dimension and all nine dimensions as an integrated whole In this 20th anniversary edition Clow includes updates from her continuing research including evidence from the supercomputer Blue Brain Project which mapped nine dimensions in the human brain She also describes how recent discoveries of ancient technology mirror the Pleiadian dimensional system Providing a journey

through the complex ideas of both modern science and esoteric wisdom this guide allows you to awaken to the full spectrum of multidimensional consciousness and to connect deeply to the center of our planet and the Divine Cosmos that surrounds us all

Lacan: Topologically Speaking Ellie Ragland, 2020-09-08 The study of topology examines the way something can change shape while still retaining the same properties Jacques Lacan devoted the last part of his teaching to the topology of the subject During the 50s he gauged the topology of surfaces torus Moebius strips Klein bottles crosscaps and from 1972 on he studied the topology of knots Borromean the sinthome Showing that bodily and mental life function topologically he did what no one had done before he added to the logic of how representations function the logic of jouissance or libidinal meaning that materializes language by making desire fantasy and the partial drives ascertainable functions of it For Lacan topology is neither myth nor metaphor It is the precise way we may understand the construction and appearance of the subject Space is multidimensional in terms of both meaning and logic Lacanian topology answers questions of post structuralism while revealing the flaws in its theories It also advances a 21st century teaching that obviates symbolic logic and its positivistic assumptions Applications are made to the clinic to literature and to the social sciences The authors collected here include world renowned Lacanian topologists such as Jacques Alain Miller Jeanne Lafont Jean Paul Gilson Pierre Skriabine Juan David Nasio Jean Michel Vappereau and several new theorists from the United States and Europe

Shades of Freedom A. Leon Higginbotham Jr., 1998-06-11 In Shades of Freedom Judge A Leon Higginbotham Jr provides a magisterial account of the interaction between the law and racial oppression in America from colonial times to the present demonstrating how the one agent that should have guaranteed equal treatment before the law the judicial system instead played a dominant role in enforcing the inferior position of blacks The issue of racial inferiority is central to this volume as Judge Higginbotham documents how early white perceptions of black inferiority slowly became codified into law Perhaps the most powerful and insightful writing centers on a pair of famous Supreme Court cases which Judge Higginbotham uses to portray race relations at two vital moments in our history the Dred Scott decision of 1857 and the Plessy v Ferguson decision of 1896 Judge

Higginbotham also documents the eloquent voices that opposed the openly racist workings of the judicial system and he shows that ironically it was the conservative Supreme Court of the 1930s that began the attack on school segregation and overturned the convictions of African Americans in the famous Scottsboro case But today racial bias still dominates the nation Judge Higginbotham concludes as he shows how in six recent court cases the public perception of black inferiority continues to persist In *Shades of Freedom* a noted scholar and celebrated jurist offers a work of magnificent scope insight and passion Ranging from the earliest colonial times to the present it is a superb work of history and a mirror to the American soul

The Constants of Nature John Barrow, 2009-05-06 Reality as we know it is bound by a set of constants numbers and values that dictate the strengths of forces like gravity the speed of light and the masses of elementary particles In *The Constants of Nature* Cambridge Professor and bestselling author John D Barrow takes us on an exploration of these governing principles Drawing on physicists such as Einstein and Planck Barrow illustrates with stunning clarity our dependence on the steadfastness of these principles But he also suggests that the basic forces may have been radically different during the universe s infancy and suggests that they may continue a deeply hidden evolution Perhaps most tantalizingly Barrow theorizes about the realities that might one day be found in a universe with different parameters than our own
