Mahesh,2013-11-27 A careful review of the literature covering various aspects of applications of lasers in science and technology reveals that lasers are being applied very widely throughout the entire gamut of physical medicine After surveying the current developments taking place in the field of medical applications of lasers it was considered appropriate to bring together these efforts of international research scientists and experts into one volume It is with this aim that the editors have prepared this volume which brings current research and recent developments to the attention of a wide spectrum of readership associated with hospitals medical institutions and universities world wide including also the medical instrument industry Both teachers and students in the medical faculties will especially find this compendium quite useful This book is comprised of eleven chapters All of the important medical applications of lasers are featured The editors have made every effort that individual chapters are self contained and written by experts Emphasis has been placed on straight and simple presentation of the subject matter so that even the new entrants into the field will find the book of value *Surgical Applications of Laser* Paul Edward McGuff,1966 **Evaluation and Installation of Surgical Laser Systems** David B. Apfelberg,2012-12-06 The advent in the 1960s of the unique and exciting new form of energy called laser brought to medicine a marvelous tool that could accomplish new treatments of previously untreatable disorders as well as improved treatment of mundane problems This brilliant form of light energy is many times more powerful than the energy of the sun yet can be focused microscopically to spot sizes as small as 30 microns Lasers can be directed into seemingly inaccessible areas by mirrors or fiberoptic cables or can be directly applied into sensitive areas such as the retina without damage to intervening structures There has been a rapid proliferation in the use of lasers in all surgical specialties Starting with bold ideas and experiments of thought leaders in each specialty the application of lasers has evolved into commonplace usage Beginning with the era when laser presentations and publications were an oddity now nearly all specialty areas have whole sections of meetings or journals devoted exclusively to laser usage Laser specialty societies within a specialty have developed and residency training programs routinely instruct trainees in laser techniques Basic science and clinical experimentation has supported laser knowledge Laser usage has also become international Newer wavelengths and accessories have added to the armamentarium of laser usage Despite the rapid growth in laser interest no single source exists to instruct the many new laser users in proper safe and effective use of this new modality Application of Lasers in Neurosurgery Leonard J.
