Woolf,2010-07-28 *Building Intelligent Interactive Tutors* discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs. The impact of computers has not been generally felt in education due to lack of hardware, teacher training, and sophisticated software, and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching. Dr. Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible, whether for classroom or life-long learning. The book describes multidisciplinary approaches to using computers for teaching, reports on research development and real-world experiences, and discusses intelligent tutors, web-based learning systems, adaptive learning systems, intelligent agents, and intelligent multimedia. It is recommended for professionals, graduate students, and others in computer science and educational technology who are developing online tutoring systems to support e-learning and who want to build intelligence into the system. Combines both theory and practice to offer most in-depth and up-to-date treatment of intelligent tutoring systems available. Presents powerful drivers of virtual teaching systems including cognitive science, artificial intelligence, and the Internet. Features algorithmic material that enables programmers and researchers to design building components and intelligent systems. *Information Systems Development* Olegas Vasilecas, Albertas Caplinskas, Gregory Wojtkowski, Wita Wojtkowski, Jože Zupancic, Stanislaw Wrycza,2006-02-08 This volume is comprised of the proceedings of the 13th International Conference on Information Systems Development held August 26th-28th 2004 at Vilnius Gediminas Technical University, Vilnius, Lithuania. The aim of this volume is to provide a forum for the research and practices addressing current issues associated with Information Systems Development (ISD). Every day new technologies, applications, and methods raise the standards for the quality of systems expected by organizations as well as end users. All are becoming dependent on systems' reliability, scalability, and performance. Thus, it is crucial to exchange ideas and experiences and to stimulate exploration of new solutions. This proceedings provides a forum for both technical and organizational issues. *Tutoring Second Language Writers* Shanti Bruce, Ben Rafoth,2015-12-12 *Tutoring Second Language Writers* is a complete update of Bruce and Rafoth's 2009 *ESL Writers*. It is a guide for writing center tutors that addresses the growing need for tutors who are better prepared to work with the increasingly international population of students seeking guidance at the writing center. Drawing upon philosopher John Dewey's belief in reflective thinking as a way to help build new knowledge, the book is divided into four parts. Part 1, *Actions and Identities*, is about creating a proactive stance toward language difference, thinking critically about labels, and the mixed feelings students may have about learning English. Part 2, *Research Opportunities*, demonstrates writing center research projects and illustrates methods tutors can use to investigate their questions about writing center work. Part 3, *Words and Passages*, offers four personal stories of inquiry and discovery. Part 4, *Academic Expectations*, describes some of the challenges tutors face when they try to help writers meet readers' specific expectations. *Advancing the Conversations* tutors

have with one another and their directors about tutoring second language writers and writing Tutoring Second Language Writers engages readers with current ideas and issues that highlight the excitement and challenge of working with those who speak English as a second or additional language
