Knowing Body, Moving Mind Patricia Q Campbell, 2011-08-01 Knowing Body Moving Mind investigates ritualizing and learning in introductory meditation classes at two Buddhist centers in Toronto Canada The centers Friends of the Heart and Chandrakirti are led and attended by Western sometimes called convert Buddhists that is people from non Buddhist familial and cultural backgrounds Inspired by theories that suggest that rituals impart new knowledge or understanding Patricia Campbell examines how introductory meditation students learn through formal Buddhist practice Along the way she also explores practitioners reasons for enrolling in meditation classes their interests in Buddhism and their responses to formal Buddhist practices and to ritual in general Based on ethnographic interviews and participant observation fieldwork the text follows interview participants reflections on what they learned in meditation classes and through personal practice and what roles meditation and other ritual practices played in that learning Participants learning experiences are illuminated by an influential learning theory called Bloom s Taxonomy while the rites and practices taught and performed at the centers are explored using performance theory a method which focuses on the performative elements of ritual s postures and gestures But the study expands the performance framework as well by demonstrating that performative ritualizing includes the concentration techniques that take place in a meditator s mind Such techniques are received as traditional mental acts or behaviors that are standardized repetitively performed and variously regarded as special elevated spiritual or religious Having established a link between mental and physical forms of ritualizing the study then demonstrates that the repetitive mental techniques of meditation practice train the mind to develop new skills in the same way that physical postures and gestures train the body The mind is thus experienced as both embodied and gestural and the whole of the body as socially and ritually informed

Mindfulness and Learning Terry Hyland, 2011-08-21 In recent decades education at all levels has been seriously impoverished by a growing obsession with standards targets skills and competences According to this model only a circumscribed range of basic cognitive skills and competences are the business of education whose main role is to provide employability credentials for people competing for jobs in the global economy The result is a one dimensional economic and bleakly utilitarian conception of the educational task In Mindfulness and Learning Celebrating the Affective Dimension of Education Terry Hyland advances the thesis that education stands in need of a rejuvenation of its affective function the impact it has on the emotional social moral and personal development of learners Drawing on the Buddhist conception of mindfulness he advances a powerful argument for redressing this imbalance by enhancing the affective domain of learning Mindfulness and Learning Celebrating the Affective Dimension of Education shows how the concept and practice of mindfulness non judgmental present moment awareness and experience can enrich learning at all levels Mindfulness thus contributes to the enhanced achievement of general educational goals and helps remedy the gross deficiency of the affective emotional aspects of contemporary theory and practice The author outlines a mindfulness based affective education MBAE programme and shows how it might be introduced into educational provision from the early years to adult education with a

view to harmonising the cognitive affective balance across the system **100 Chakra System** Raven Shamballa,2019-07-23
