Children in Conflict Henry R. Reinert, Allen Huang, 1987 The Autonomous Child Carol Speekman Klass, 2023-02-13 Originally published in 1986 this book's focal point is a field study which asks whether the social childrearing context of daycare transmits to young children values different from those within America's dominant value tradition of individualism Daycare critics were concerned that this social childrearing within daycare would weaken the family and promote collectivist rather than individualistic values and thereby threaten the social continuity of America's values Through participant observation four daycare teachers' interactions as they emphasize children's individual learning experiences and children's social learning experiences are examined By focusing on the actions and words of daycare teachers and their children in their daily activities over time this field study provides a conceptual model for an initial understanding of the relationship of daycare to the continuity of America's values Handbook of Global Education Policy Karen Mundy, Andy Green, Bob Lingard, Antoni Verger, 2016-05-02 This innovative new handbook offers a comprehensive overview of the ways in which domestic education policy is framed and influenced by global institutions and actors Surveys current debates about the role of education in a global polity highlights key transnational policy actors accessibly introduces research methodologies and outlines global agendas for education reform Includes contributions from an international cast of established and emerging scholars at the forefront of the field thoughtfully edited and organized by a team of world renowned global education policy experts Each section features a thorough introduction designed to facilitate readers' understanding of the subsequent material and highlight links to interdisciplinary global policy scholarship Written in an accessible and engaging style that will appeal to domestic and international policy practitioners social scientists and education scholars alike **Research on**

Teaching Strategies and Skills in Different Educational Stages Pedro Gil-Madrona, Linda Saraiva, Luisa Losada-Puente, 2025-03-19 The teaching practice becomes a reciprocal activity in the classroom when teachers apply their creativity and their knowledge resulting from research and scientific evidence in the didactic teaching process with the purpose of strengthening in the students the key competencies of their training turning students at the core of the didactic process Teaching strategies must be articulated from previous research and planning and designed sequentially to promote

real and interesting learning scenarios and thereby achieve significant learning From this perspective of teaching learning strategies the reciprocal interaction between the student and the teacher becomes the focus of attention with a playful motivating interesting and rewarding approach for the learner The role of the teacher is conceived as fundamental in the teaching process to achieve the link between teaching learning and evaluation strategies For this reason multidisciplinary studies are welcome from all stages of the educational system with quantitative qualitative and mixed approaches and reviews promoting good teaching practices of reflection and innovation from these studies

Developing Social Competency in Young Children Christine A. Schmidt, 2019-07-02 Social competency is a set of skills that provide children with the tools and abilities to successfully navigate the world around them Developing Social Competency in Young Children looks at each of the seven Cs of social competence communication community building coping confidence conflict resolution control and curiosity During any given day a child will enter and exit many group situations More often than not children lack the knowledge experience or emotional intelligence to be socially competent in all situations There is not a switch or a specific age when children automatically become socially competent and adults often assume that when children reach a certain age

or milestone they will know how to effectively employ the seven Cs of social competency without being taught These skills must be taught and environments need to be designed to encourage the development of these skills while intentionally providing opportunities to test and hone them Developing Social Competency in Young Children examines the role of the adult in designing the environment and using intentional strategies to maximize a child's success At the end of each skill discussed there are parent and staff educational tips and strategies that can be used in everyday life

Liu,Louis A. Schmidt,Xuechen Ding,Xi Chen,2024-02-06 Solitude has been conceived of as both a physical and perceived separation from others Given the current state of virtual communication permitted by technology contemporary conceptions of solitude describe a state where an individual is removed from opportunities for social interaction Historical views have emphasized both the good and the bad of solitude for child and adolescent development For example spending time alone is thought to facilitate critical developmental skills including individuation self regulation and achieving a sense of autonomy However there is also widespread concern that spending too much time alone will deprive children and adolescents of the critical and unique opportunities and benefits afforded peer interactions This is one example of the paradox of solitude that illustrates the complex nature of solitude and its relations with well being In addition researchers have further proposed a model of developmental timing effects for solitude in which non linear variations are postulated in the implications of solitude from early childhood to emerging adulthood Such non linear variations reflect the myriad of factors that could serve to mediate moderate and complicate how solitude impacts child and adolescent well being
